

How to convert images into PDF files on iPhone and iPad

The image file on an iOS device is in JPEG format. This format is highly compatible so you can easily send and share it with other devices. However, for some documents or digitizers, it may be possible to request images in PDF format.

The image file on an iOS device is in JPEG format. This format is highly compatible so you can easily send and share it with other devices. However, for some documents or digitizers, it may be possible to request images in PDF format.

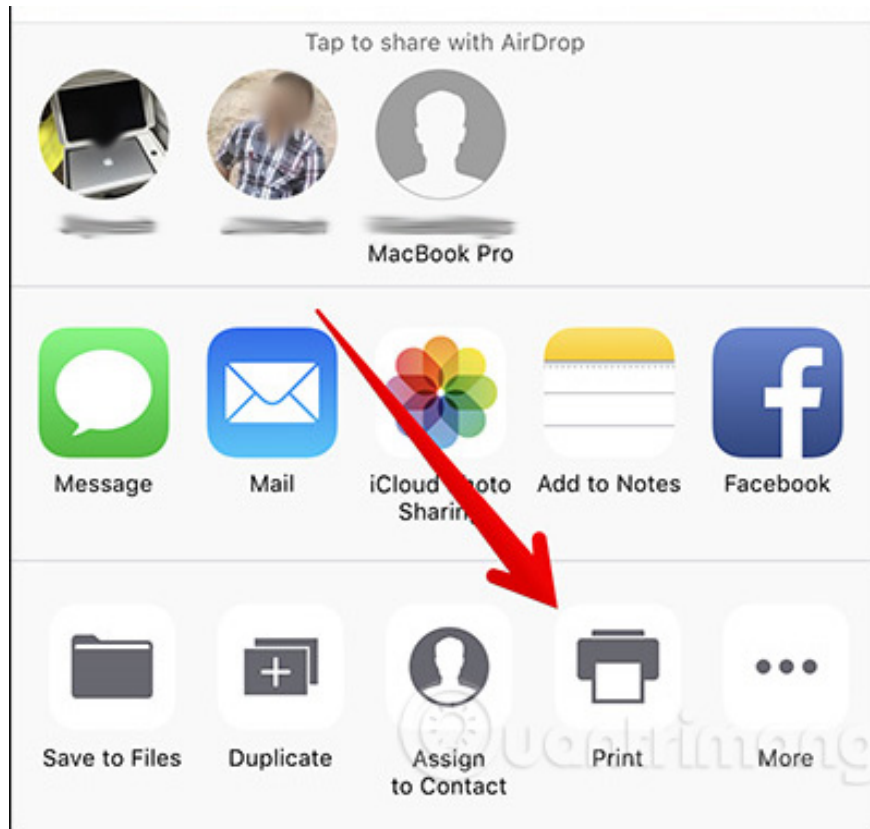

Fortunately, with the new iOS version, you can convert images into PDF files on your mobile phone easily. You don't need to devote third-party apps or software that can still convert images directly on iOS devices.

Step 1 . Open the **Photos** app, select the photo you want to convert to PDF.

Note: If you want to convert multiple photos to PDF format, click **Edit** in the top right corner and then select the image.

Step 2. Click the **Sharing** button. (Square button, with arrow pointing up in lower left corner)

Step 3. Next, select **Print** .

Step 4. Next, use two fingers to scale the image before converting it to PDF.

You can also use 3D Touch to change photos to PDF.

Step 5. Next, you can share photos that have been converted to PDF via Message, Mail or other application.

In addition, you also have the option to save the converted image into the Files application. Click **the share button** at the top right of the screen, then select **Save to Files** . Finally select the folder you want to save the image to.
