

How to convert text into speech on TTS

TTS will convert text into speech and have files for us to download. So users can easily use audio files for other purposes.

You do not need to register an account and can immediately use TTS to convert. Below are instructions for converting text into speech on TTS.

Instructions for converting text into speech on TTS

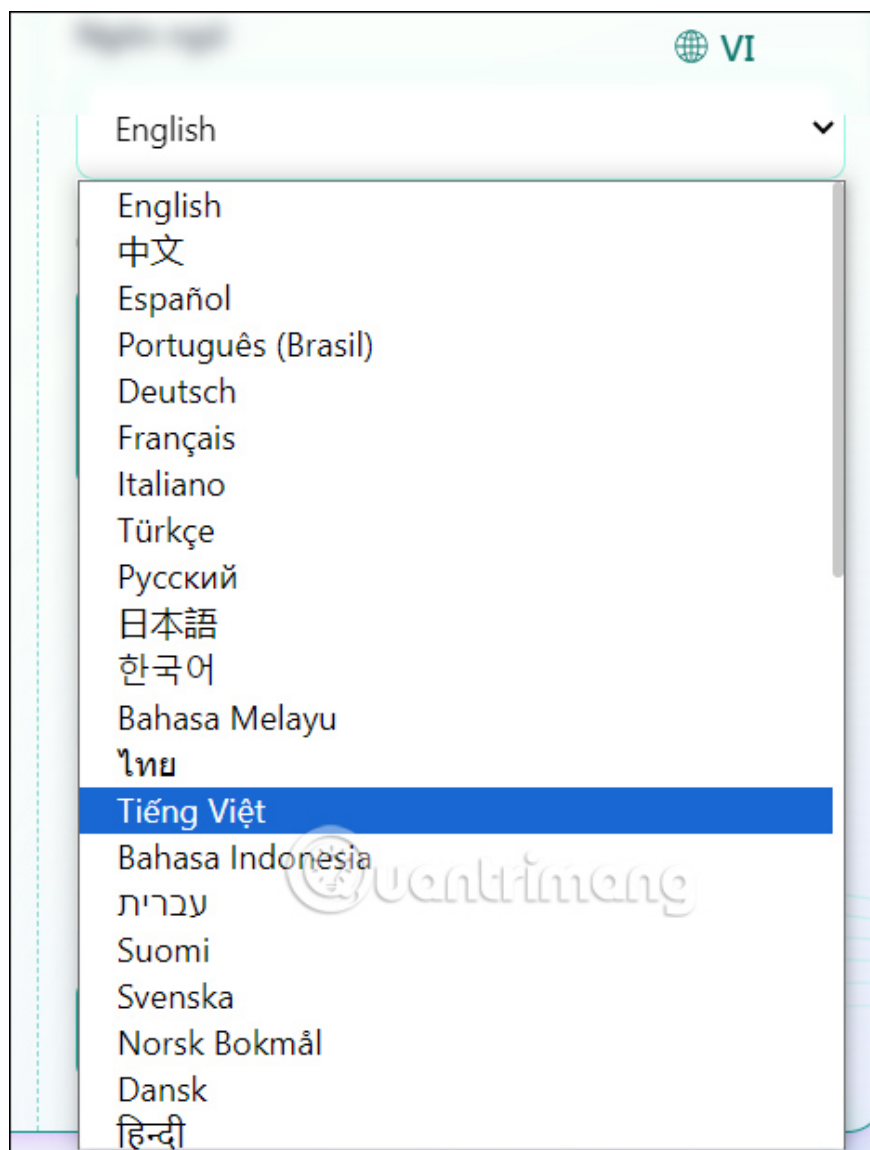

Step 1:

Users access the link below to visit TTS's page. Then you **paste the content you want to convert into voice** .

<https://ttsynth.com/vi>

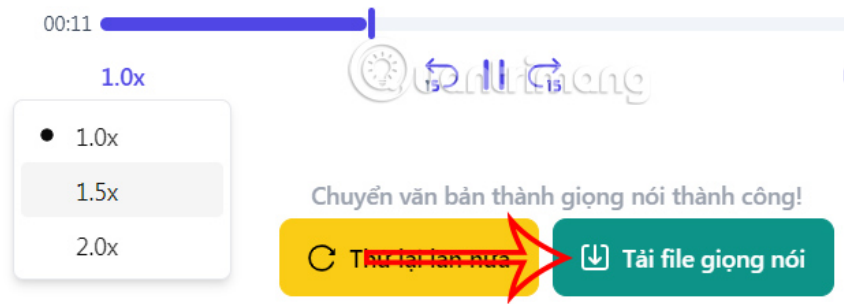

Step 2:

Next, in the TTS website interface, **select the language** for the text pasted into the website. The website supports many languages ??for us to choose from.

Step 3:

In **the Voice section**, we select the voice we want to use for the text. Depending on the language you choose, the supported voice will be different. Once you have selected your voice, **click Start conversion** below to create the audio file.
