

How to Copy Uncopyable Text Content

Do you want to copy text content on a web page that prevents selecting or right-clicking on the content? Although it may seem impossible, there are ways you can copy text content on a protected website, even if you can't right-click on the page. This article shows simple ways to copy any content on Chrome, Safari, Firefox and Microsoft Edge when using a computer, phone or tablet.

Disable JavaScript

Turn off JavaScript if right-click menu is disabled. If you can't right-click on the page, don't see another right-click menu, or get an error message saying you can't copy content, disabling JavaScript can help you enable the right-click menu. Here are the steps to help you find the option to disable JavaScript in your browser:

Chrome on a Windows or Mac computer: Click the three-dot menu and go to Settings > Privacy and security > Site Settings > JavaScript.

Chrome on Android: Tap the three dots on Chrome and go to Settings > Site settings.

Safari on iPhone/iPad: In the Settings app, go to Safari > Advanced.

Safari on Mac: Click the Safari menu and go to Preferences > Security.

Edge on a Windows or Mac computer: Click the three-dot menu and go to Settings > Cookies and site permissions > JavaScript.

Firefox on PC or Mac: Type about:config in the address bar and press Enter or Return. Click Accept the Risk and Continue. Type javascript in the search bar, click javascript.enabled in the search results, and click the slider to disable JavaScript.

Use Extensions on Chrome or Firefox

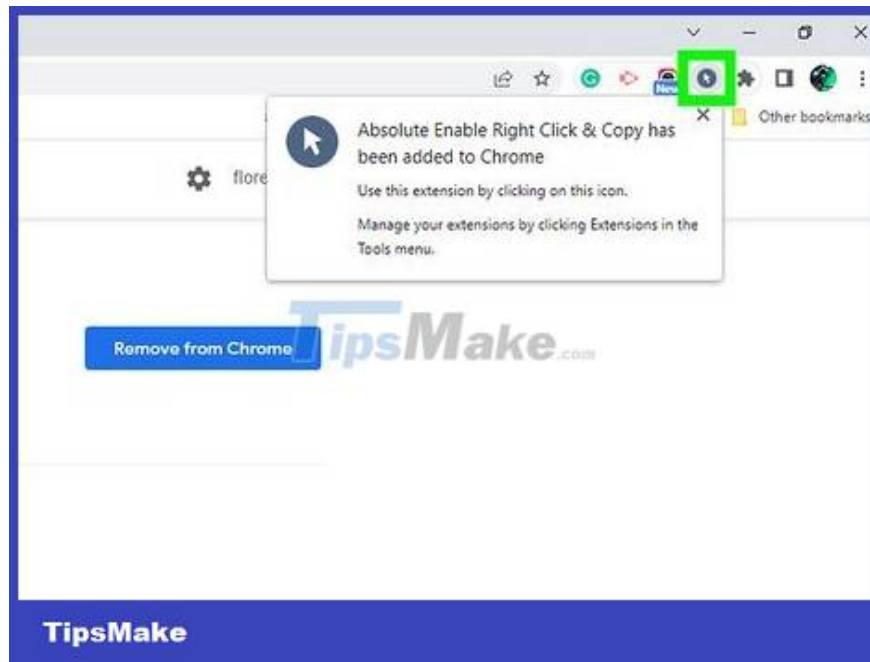

Install the Absolute Enable Right Click & Copy extension. This is a Chrome extension that lets you copy and paste any content on websites browsed with Chromium web browsers on your computer, including Google Chrome and Microsoft Edge, even if you can't select the content or right click. The Firefox browser also has a similar extension.

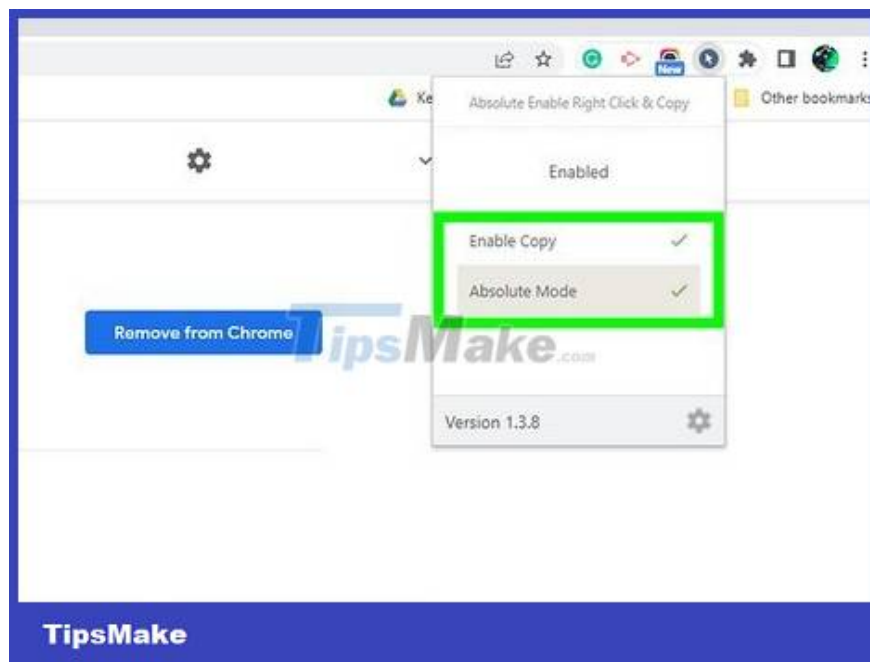

Chrome and Edge:<https://chrome.google.com/webstore/detail/absolute-enable-right-click/jdocbkpgdakpekjlhemmfncgdjeiika?hl=en>

Firefox:<https://addons.mozilla.org/en-US/firefox/addon/absolute-enable-right-click>

If you want to duplicate images on the page, the extension will not be effective.

Click the Absolute Enable Right Click & Copy icon. You will see the icon in the top right corner of the browser.

Select Enable Copy and Absolute Mode. Choosing both options ensures you can bypass most of the features that web designers use to block copy and paste operations.

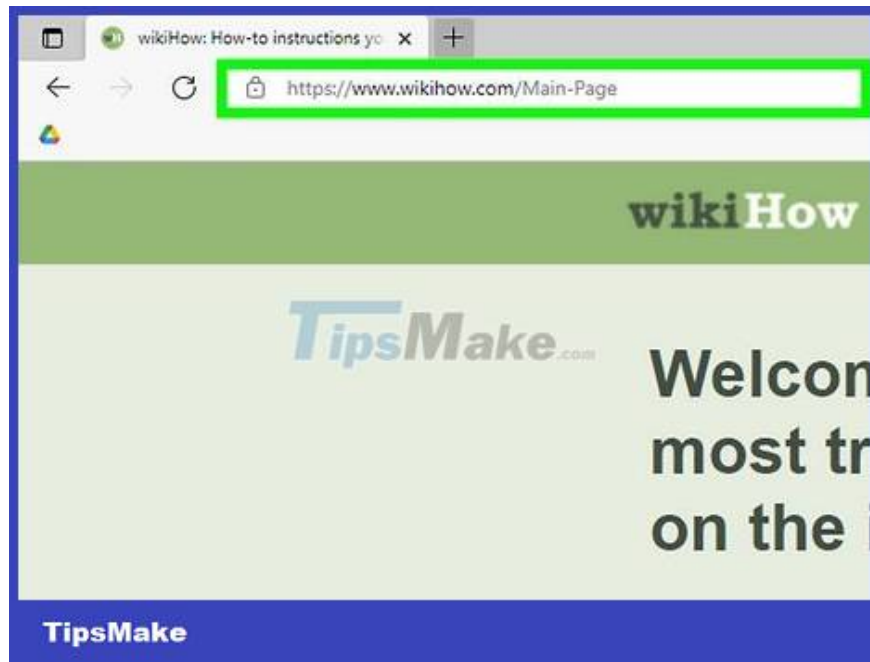

Visit the website whose content you want to copy. This extension will work for most websites. Even if you can't select individual lines with your mouse with this extension, you can still copy and paste the entire content on the web page once the extension is enabled.

Copy the content you want to copy. Now you can select some content and right-click Copy.

If you still can't select content, click any blank space on the page, press Ctrl + A (Windows) or Cmd + A (Mac), open the document or text file, and then paste the content. content copied to the document

Use the Web Select feature on Microsoft Edge

Open the website on Microsoft Edge browser. This browser has a cool feature called Web Select that allows you to select and copy any content on a web page - even if you can't select the content. If you use a Windows computer, you already have Microsoft Edge. Mac users can download Edge from <https://www.microsoft.com/en-us/edge>.

Right-click an empty space on the page and select Web Select. You can also press Ctrl + Shift + X (on Windows) or Cmd + Shift + X (on Mac) to quickly open the tool.

Move the cursor to the content you want to select. This highlights everything in the selection and adds a "Copy" button in the lower right corner.

Click Copy. Now that the content has been copied to the clipboard, you can paste it into any document or application.

Save web pages as PDF documents

Save web pages as PDF documents. If you can right-click on the page but cannot select the content, you can save the page as a PDF file and use a PDF reader program that allows you to copy the data. The steps will vary depending on your device:

On Windows: Press Ctrl + P, set the printer to Microsoft Print to PDF, and click Print.

On Mac: Press Cmd + P, select PDF at the bottom of the page, select Save as PDF, and select Save.

On iPhone/iPad: Open the website on Safari and take a screenshot. Tap the screenshot preview, select Full Page at the top, tap Done, and select Save PDF to Files. Choose an easy-to-remember folder and tap Save PDF to Files.

Android: Tap the menu in Chrome, choose Share, tap the circular PDF icon, and choose a folder that's easy to remember.

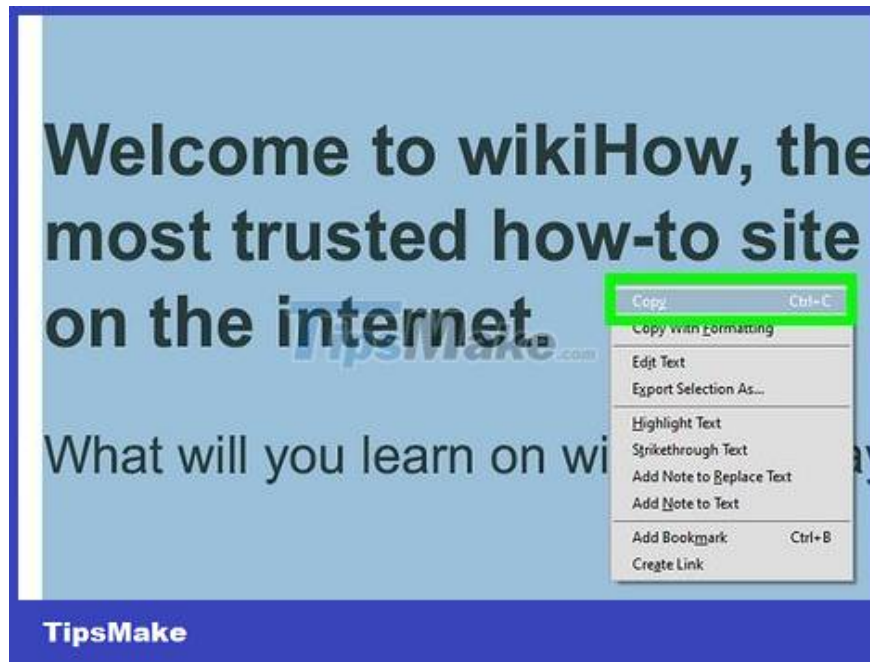

Opening a PDF document in a reader program allows you to copy the content. Now that you have a PDF document, you can easily copy and paste the content across many PDF reading programs. The Adobe Reader program is usually ineffective, but the following options are:

On Windows: If you have Microsoft Word, right-click the PDF, select Open With, and select Word. Otherwise, you can upload the PDF to Google Drive. Once the file is uploaded, you'll right-click the file in Google Drive, select Open with, then select Google Docs.

On Mac: Double-click the PDF document to open it in Preview. If you can't select text, you'll click the Text menu and choose Text Selection.

On iPhone/iPad: Open the Files app, find the PDF file you just saved, and tap it to open it.

On Android: First, upload the file to Google Drive. Next, open Chrome, go to <https://drive.google.com> and sign in. Tap the three dots in the upper right corner and select Request Desktop Site. Open the PDF document and tap Open in Google Docs.

Copy content in PDF documents. Use the cursor only to highlight content, then right-click (or tap and hold) on the selection and select Copy.

Use Live Text on iPhone or iPad

Screenshot the content you want to copy. If you can't touch and select content on your iPhone or iPad's browser, you can screenshot the content you want to copy and use Live Text to export the text.

You need iOS 15 (on iPhone) or iPadOS 15.1 (on iPad) or later to use Live Text.

If you need to take a lot of screenshots because of long content, see how to save a web page as a PDF document

Open the Photos app and tap the screenshot. You'll find the screenshot in the Recents folder.

Touch and hold the content you want to copy. Now you can select text content on photos like other types of text. Simply expand the bars on either side of the highlighted content to select all the content to copy.

Tap Copy on the menu. You can now paste content into any app or file, including the Notes app.

Use Google Photos on Android, iPhone, or iPad

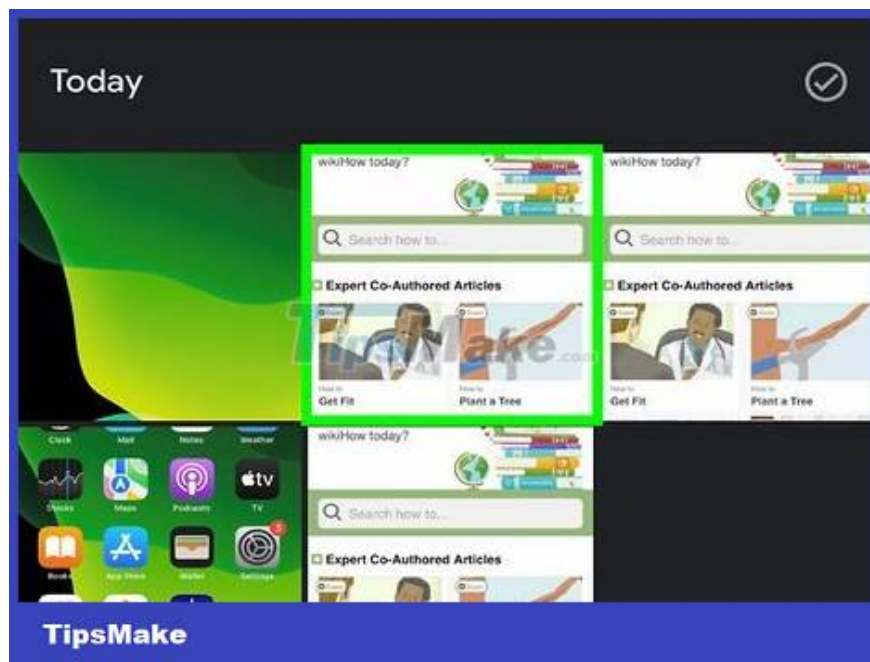

Take a screenshot of the content to be copied. The Google Photos app has a "Copy Text" feature that lets you export text from photos, including screenshots.

If you have to take multiple screenshots because of long content, see how to save a web page as a PDF document

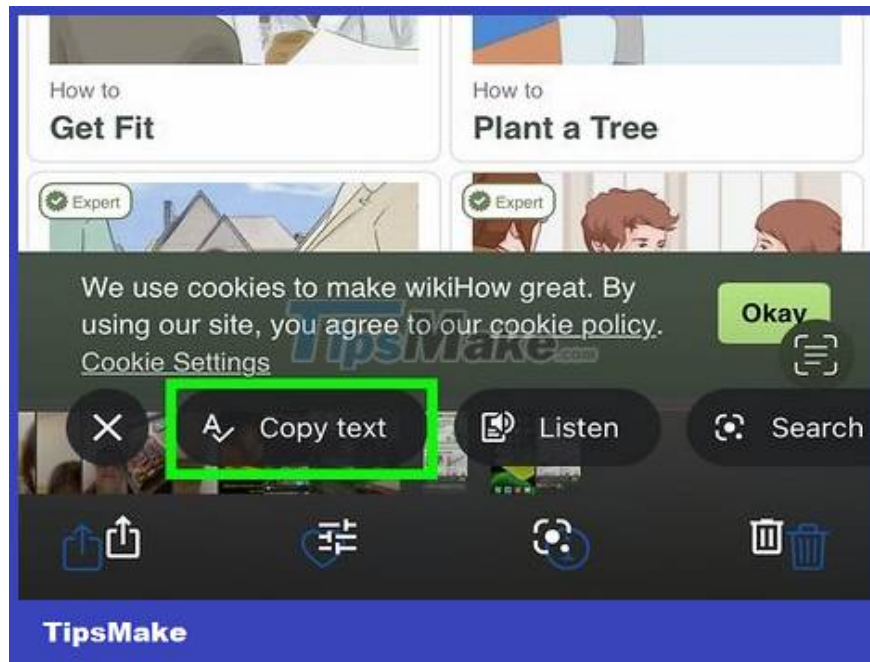

Google Photos also supports text export on iPhone or iPad.

Open the Google Photos app. This is the "Photos" app with a colorful flower icon.

Tap on the screenshot you just took. You will see below the image there is an option to copy text.

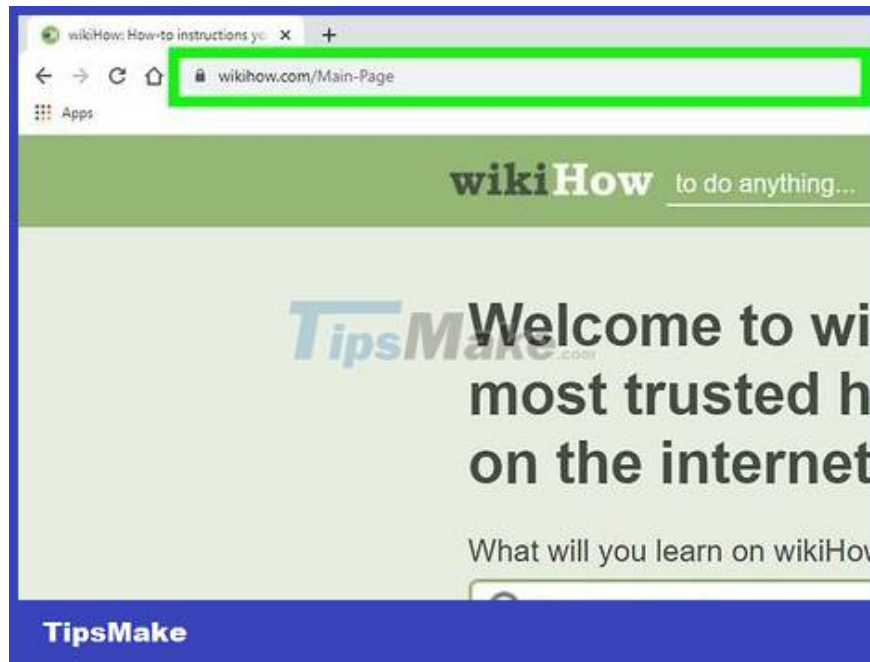

Tap Copy text. A few stars will appear on the image, and now some words in the text are highlighted.

Drag the slider to select all the text and tap Copy. The content is immediately copied to your clipboard, and you can paste it into any file or application.

Use Google Photos on your Windows or macOS computer

Take a screenshot of the text to be copied. If you just want to copy short text, take a screenshot as usual. However, if you want to copy the entire content on a website, you can use the useful feature built into Google Chrome to screenshot the entire page. Proceed as follows:

Visit the website on Chrome.

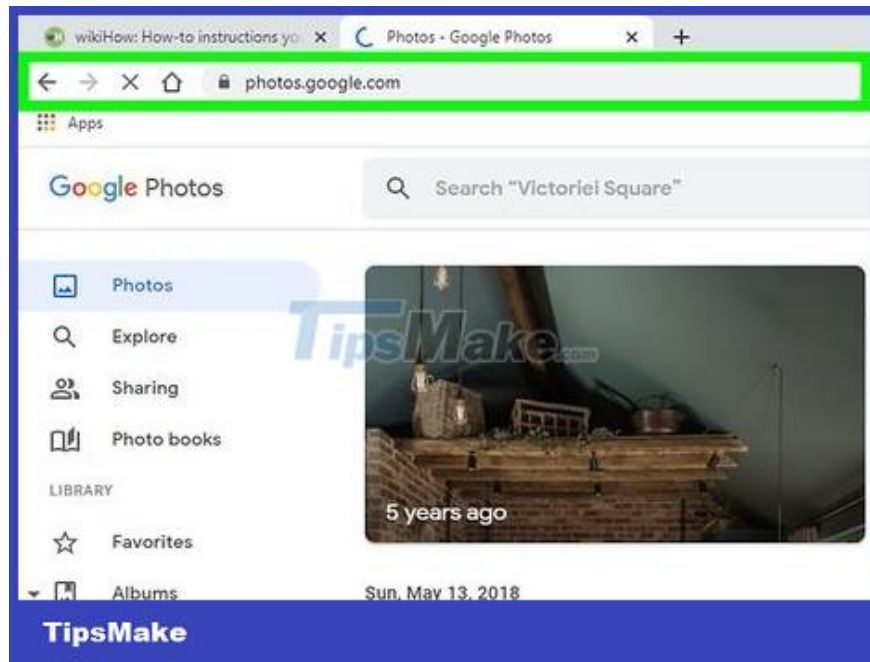

Click the three-dot menu in Chrome and select More tools > Developer tools.

Press Ctrl + Shift + P (PC) or Cmd + Shift + P (Mac).

Enter screenshot in the field that appears.

Find the "Capture full size screenshot" option and click the Screenshot button.

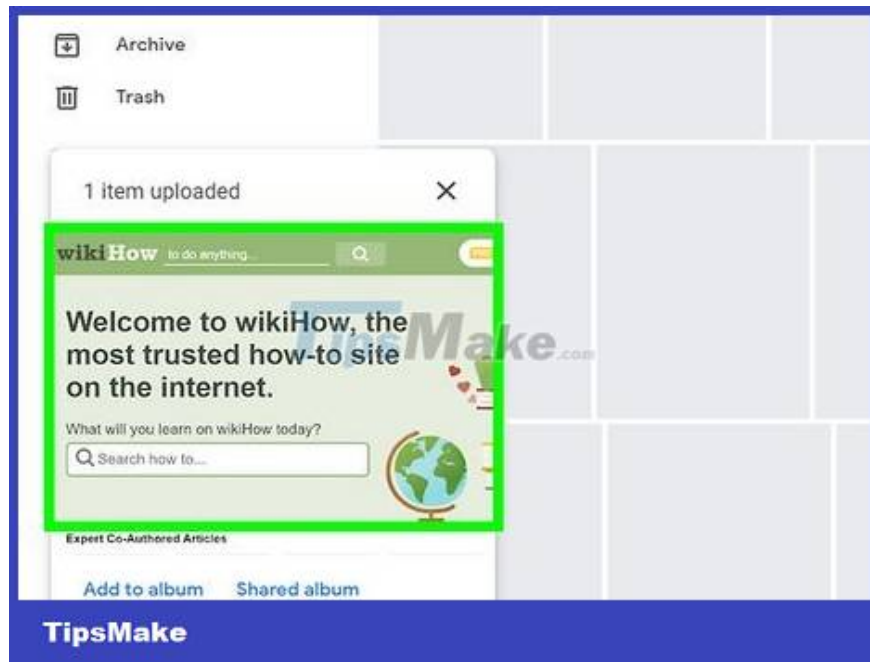

Click Save to save the file.

Go to <https://photos.google.com> and log in to your Google account. If you don't have a Google account, you can create one right away at no cost.

Upload screenshots to Google Photos. Just click Upload above Photos, select Computer, and choose your photos.

Click on the photo. You will now see the option to copy text from photo above.

If it's a photo of a long page of content, Google Photos can't read the content because the photo of text is low quality. In this case, you can crop the screenshot to keep the necessary parts and upload the image.

Click Copy text from image. This option is at the top of the page.

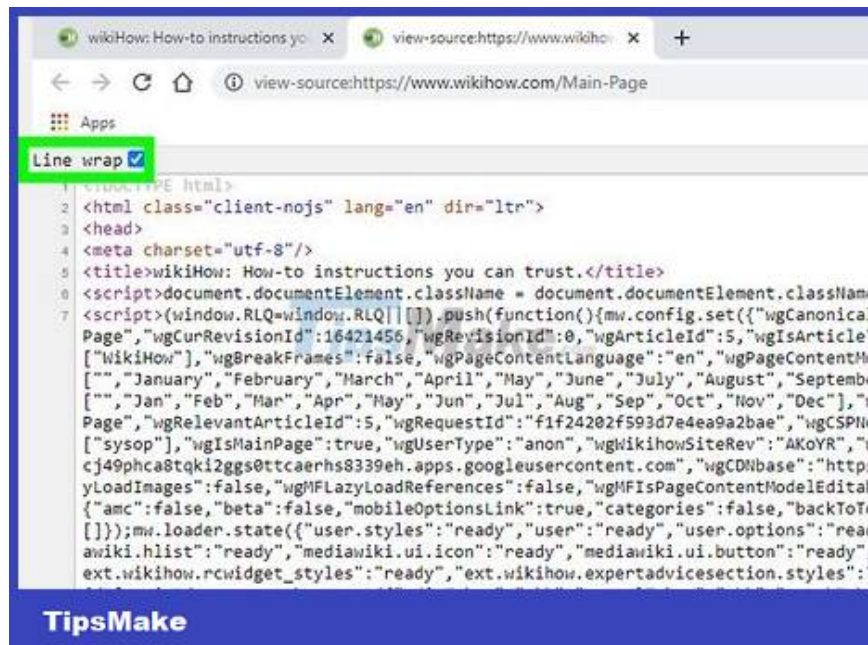

View source code

Press Ctrl+U (Windows) or ? Cmd+? Option+U (Mac). This is the option to display the website's source code in any browser. If the content to be copied is not an image, you can copy the content from the source code and paste it anywhere.

If you use Safari on Mac, you'll need to enable the Develop menu first. Click the Safari menu, go to Preferences > Advanced, then check the box next to "Show Develop menu in menu bar."

Viewing the source code to copy website content is relatively difficult, because the content to be copied is in HTML format. However, when all else fails, here's an effective way to copy content.

Enable line wrapping (if available). If you use a Chromium browser like Chrome or Edge, simply check the box next to "Line wrap" in the top left corner to make the text easier to read. On Firefox, you'll right-click an empty

area of ??the source code and select Wrap long lines.

The image shows a code editor window with a 'Line wrap' checkbox checked. The code is HTML and JavaScript. A line of code is highlighted in green: `<title>wikiHow: How-to instructions you can trust. </title>`. The code includes various meta tags and a large JavaScript configuration object for a mobile application. The editor has a blue border and a 'TipsMake' logo at the bottom.

Copy the necessary content. Now you can browse the source code to find what you need to copy. You just need to use the mouse to highlight the text, then press Ctrl + C (on Windows) or Cmd + C (on Mac) to copy the content. The next thing is to paste the text wherever you want.

To find specific details in the source code, look for a word in the content to copy. Next, press Ctrl + F (on Windows) or Cmd + F (on Mac) and enter that word to search in the source code.
