

How to cover personal information of photos on the phone

Skitch application on Android, iOS will edit the image which has the ability to obscure the personal information, secrets contained in the image.

Many people, when sharing photos with friends on the phone, worry about personal information, some information needs to be kept confidential and do not want to be revealed. If you transfer that image to your computer and then use photo editing software to blur the information you need to hide, it will take a lot of time. If so, you can use the Skitch app for Android and iOS.

Basically, Skitch is an image editing application that has the ability to obscure all the personal and confidential information that users want to hide when sharing images. The following article will show you how to use the Skitch application to blur the content on the image.

How to use Skitch to obscure content on images

1. Download the Skitch Android app
2. Download the Skitch iOS app

Step 1:

Currently Skitch application is only available on iOS operating system and Android you have to download apk file to the device. You install the application according to the link above, then start the application. In the first interface, you will see the application introducing the features, press the X to ignore.

Next, the application will need users to allow access to the Camera, click OK.
