

# How to create a 7-color text effect in Photoshop

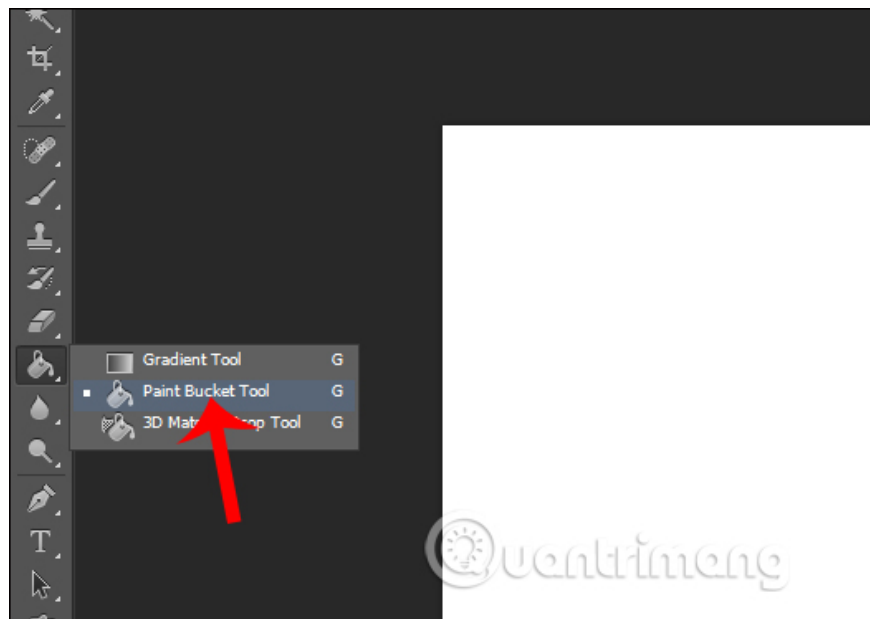

The 7-color text effect in Photoshop creates a more artistic, eye-catching typeface with new color scratches.

In addition to editing images in Photoshop, with this professional image editing software, you can change text with many different types, such as vortex text effect, light ray style text on Photoshop, fire text effect glowing or fancy 7-color font effects. The 7-color text effect brings fancy text with scratches and a rainbow of 7 colors, or other colors if you like. Text inserted in photos with Photoshop will definitely add a lot more effects. The following article will guide you how to create a 7-color text effect in Photoshop.

## How to create 7 color Photoshop text effects

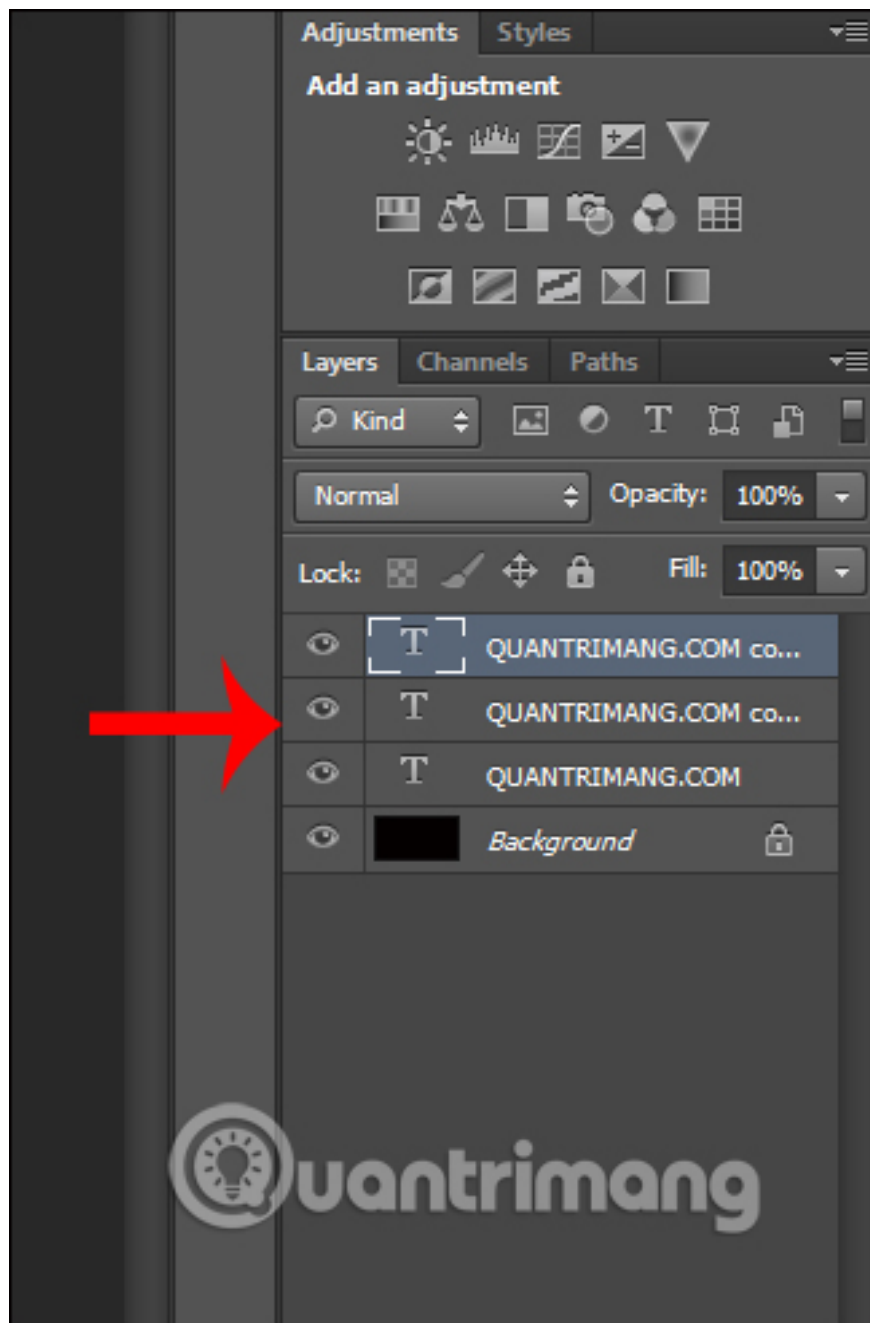

### Step 1:

First, create a new white canvas horizontally, then hit the **Paint Bucket Tool** to fill the white text with black.

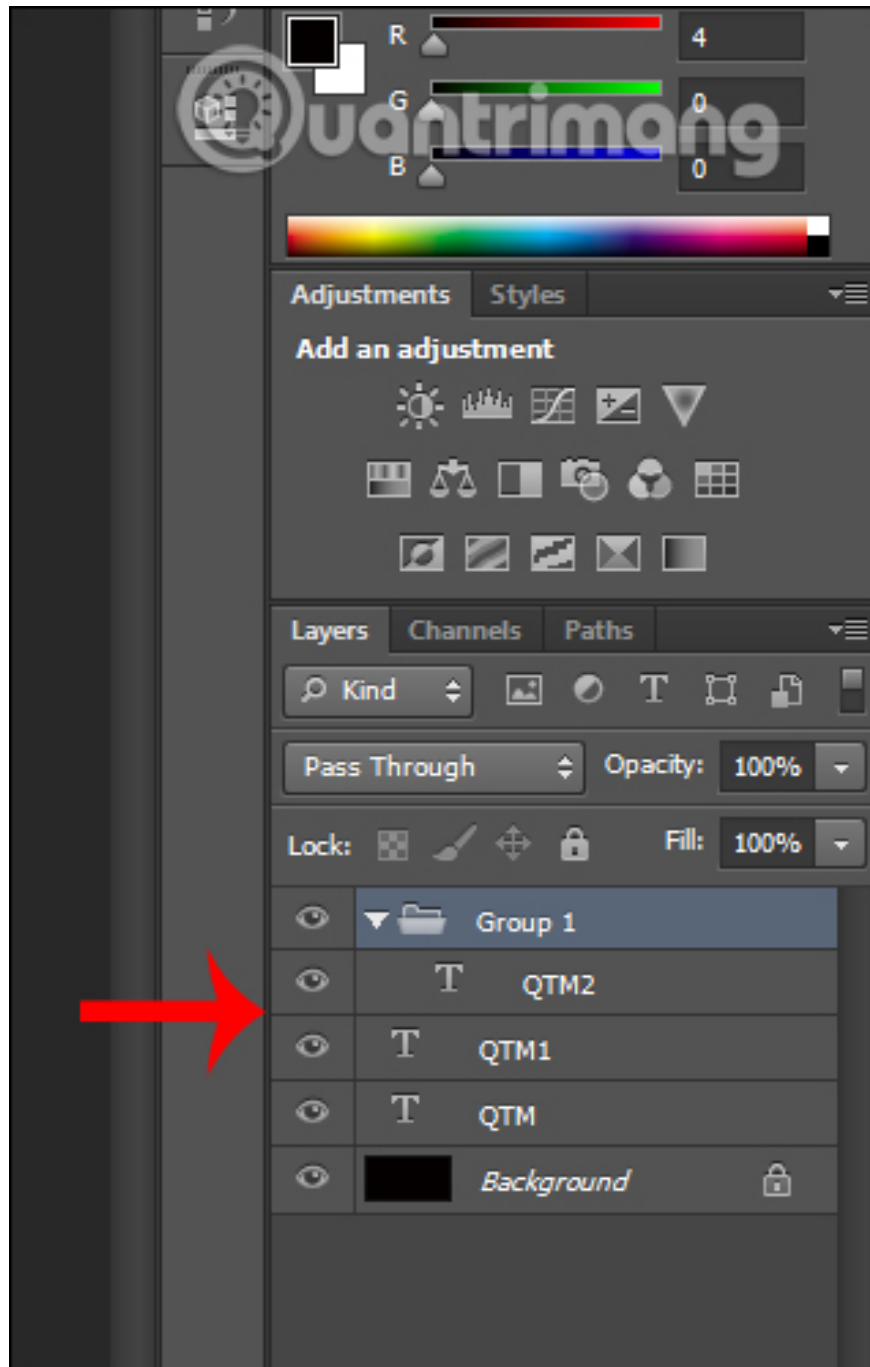

### Step 2:

Click the **Text key**, then type the style font with optional font and size, do not get too big with the frame. Then press **Ctrl + J** twice to duplicate the text layer twice as shown below. It is recommended to change the name of the 3 text layers for ease of later manipulation, for example, it will leave QTM, QTM 1, QTM 2 for the original text layer, the first copy layer and the second copy text layer.

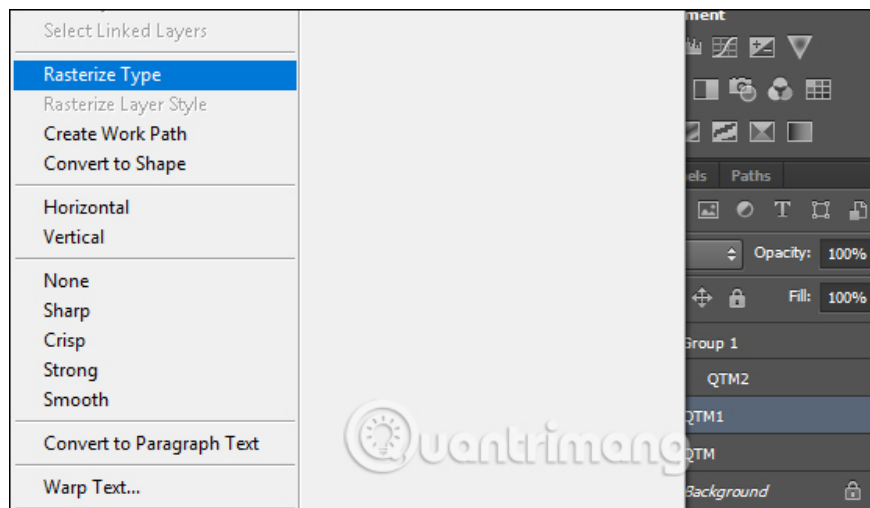

Next press Ctrl + G to create layer group folder.

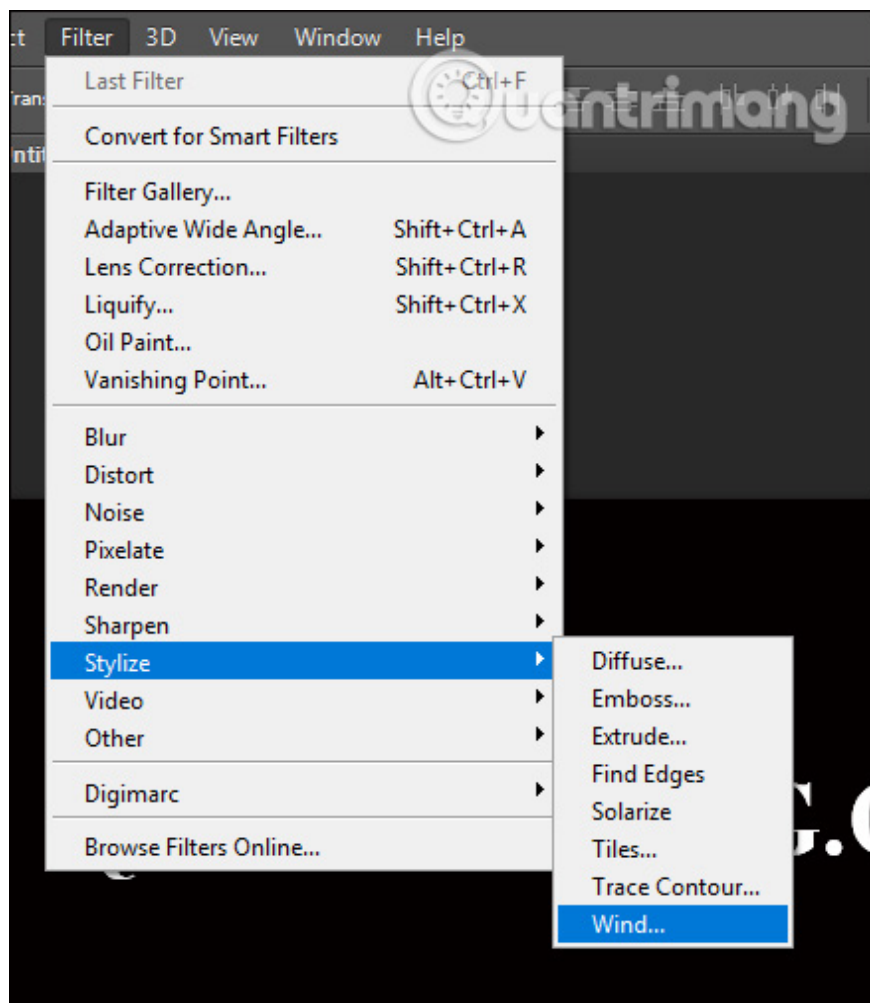

**Step 3:**

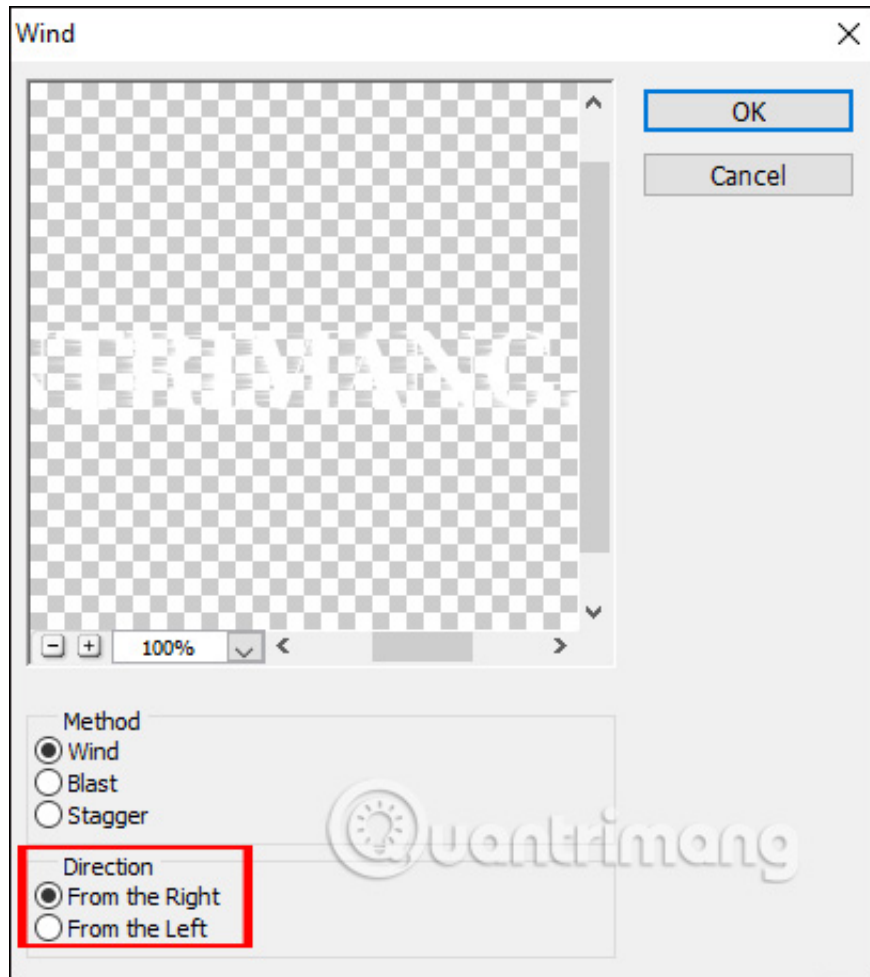

**Turn off the eye icon in the QTM 2 layer and then right click on the QTM 1 layer and select Rasterize Type**

Continue to click **Filter> Stylize> Wind** .

Display the new user interface, click **From the Right** . Repeat this operation and select **From the Left** .

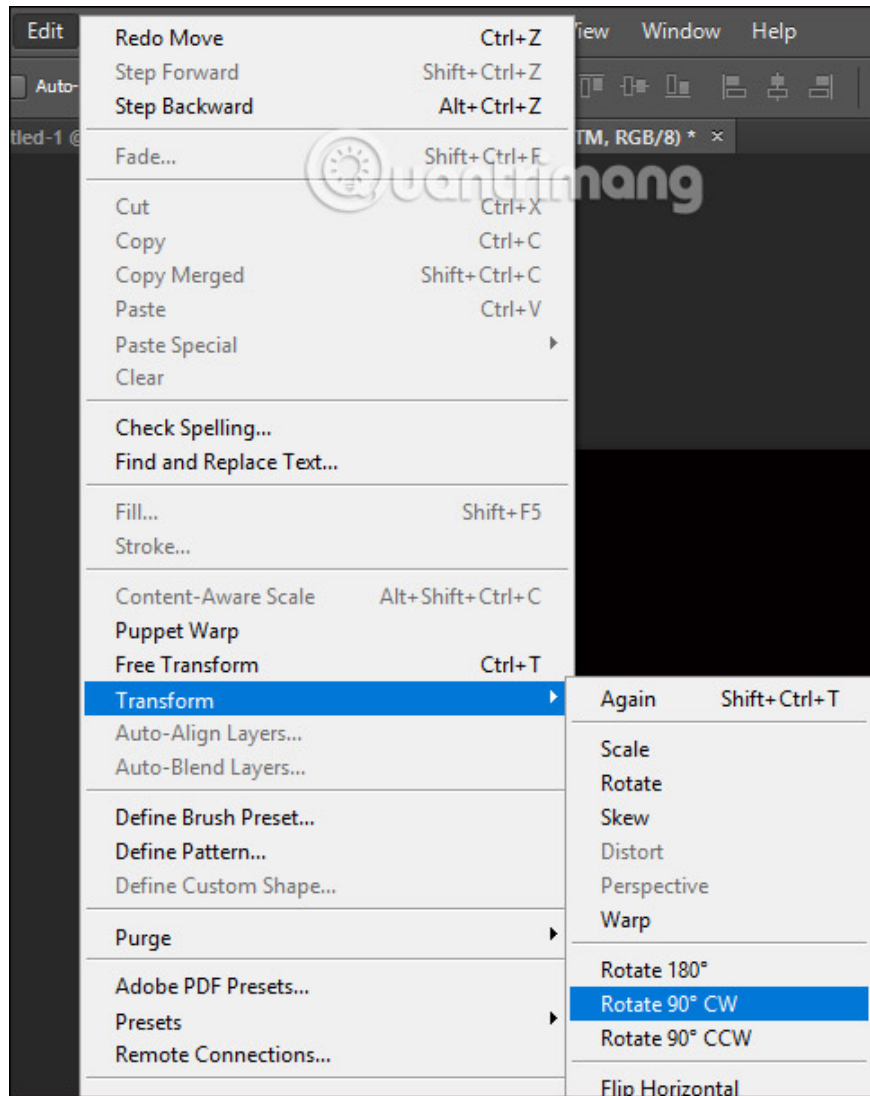

As a result, we have the text with scratches around as shown below.

**Step 4:**

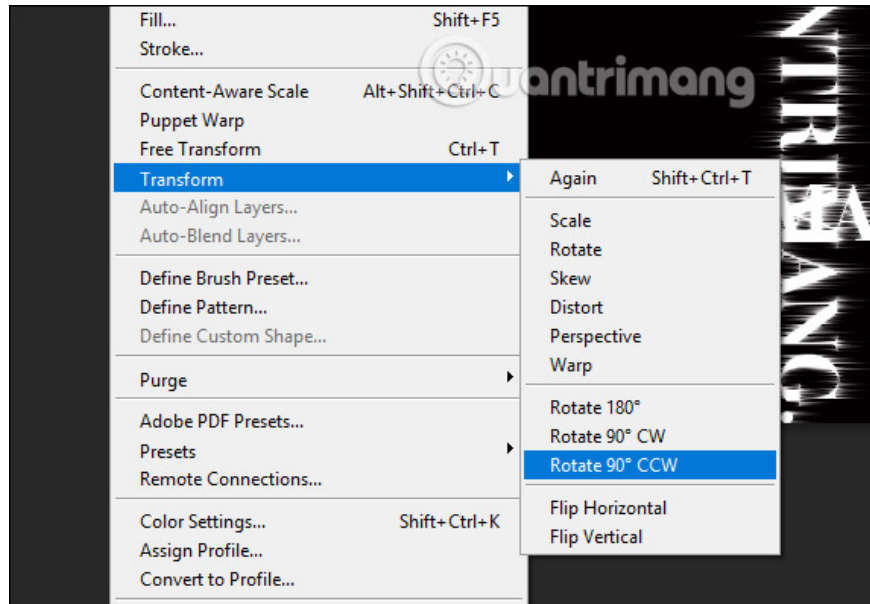

Next, click on the **QTM layer** and choose **Edit> Transform> Rotate 90 CW (Clockwise)** .

Then we press **Filter> Stylize> Wind** and repeat the operation in step 3 with the QTM layer and the result is shown below.

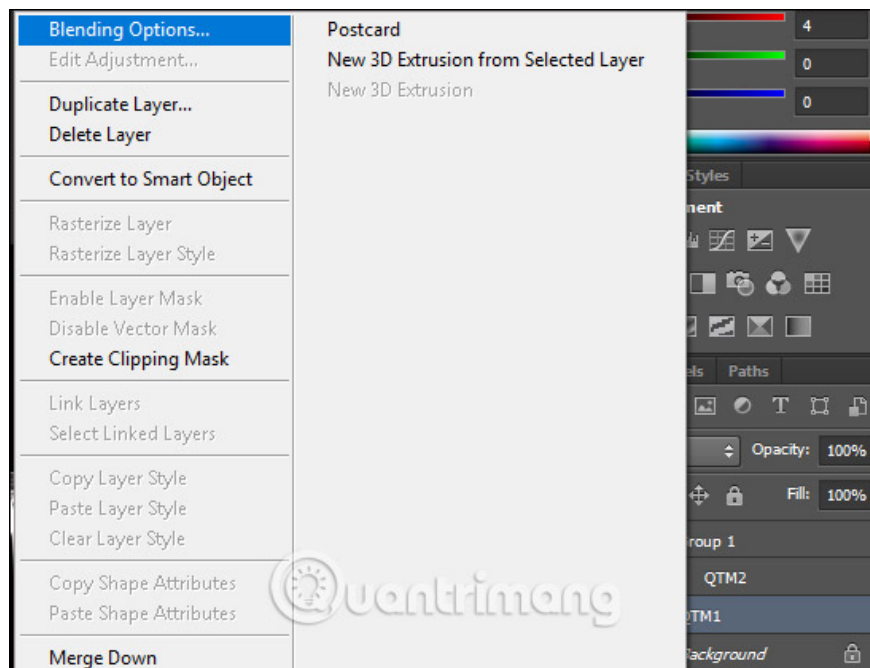

Click **Transform** again and change it to **Rotate 90 CCW** (Counter Clockwise) .

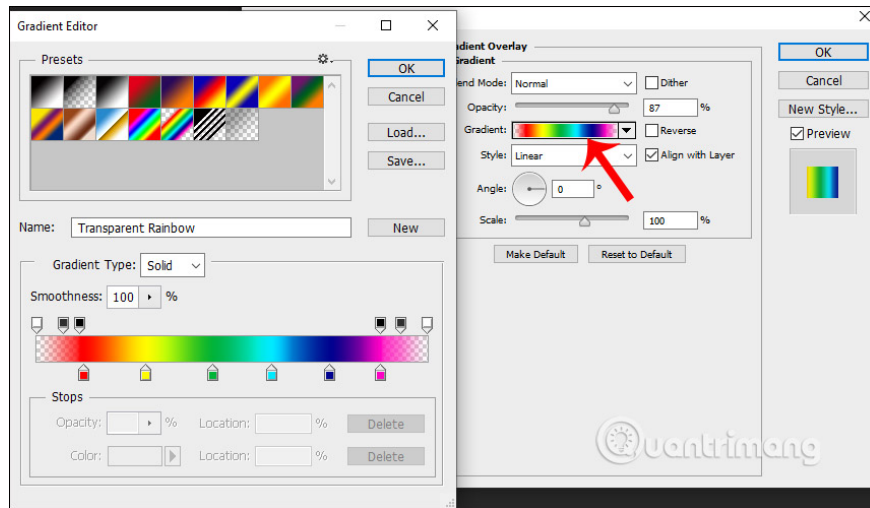

**Step 5:**

**Merge layer QTM and QTM 1 by pressing Shift and selecting both then press Ctrl + E.** Right-click on the newly merged layer and choose **Blending Options** .

In Blending Options, click on **Gradient Overlay** and **select 7 colors** and **leave the Angle at 0 degrees** . The 7-color picker has lots of different colors mixed together.

### Step 6:

Click the eye icon again in the QTM 2 layer , right-click on Blending Options and also choose the same color as above.

Our result is the complete word as below. If you want to change the black background color, press and background and then choose the color change.
