

# How to create a bootable USB without Format using EasyBCD

EasyBCD stands out with its ability to create a bootable USB and the advantage of this feature is that you do not need to format the USB. With just a few simple steps, you can create your own bootable USB to use for many different work purposes. For details on how to do it, please follow the article below.

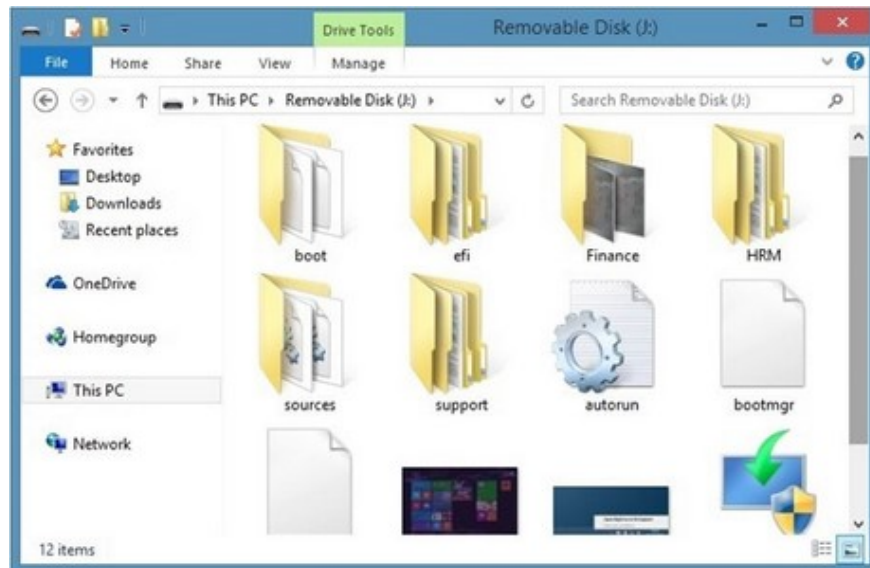

In previous articles, we guided you to install Windows from USB quickly and easily. Next, we would like to introduce to you EasyBCD software that can do that job on USB without formatting. . Isn't it great? Please follow these instructions:

If you don't have it, you can download the latest version of EasyBCD software to use.

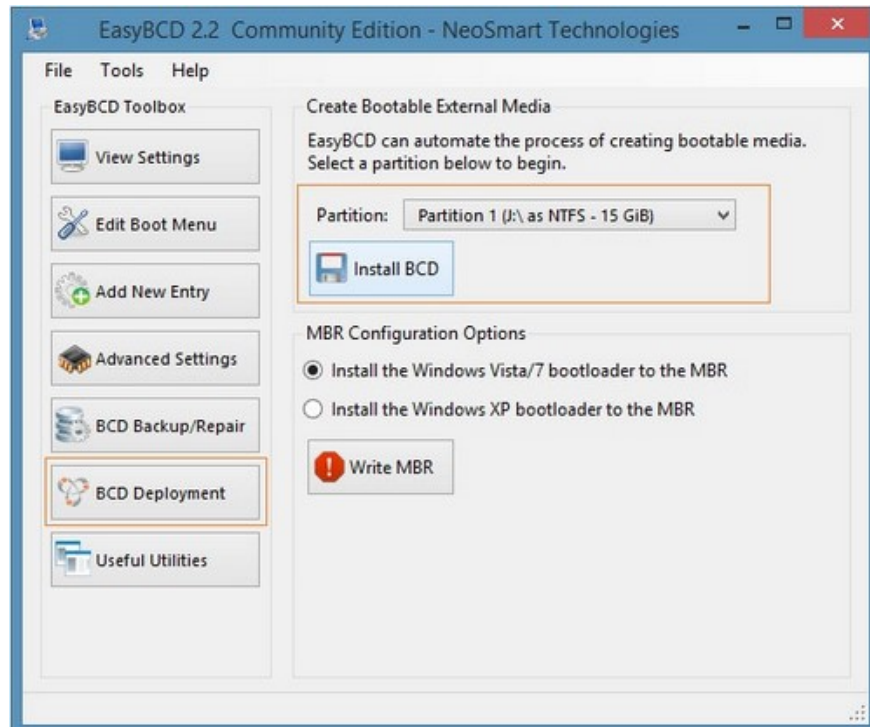

After downloading EasyBCD to your computer, install the software. If you have difficulty installing, you can refer to [here](#):

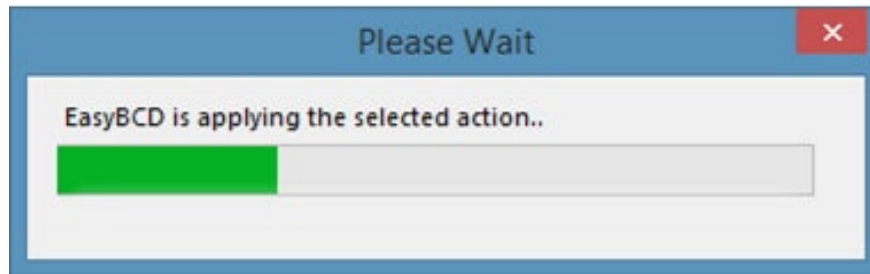

**Step 1 :** The software installation is complete, you start by inserting the USB into the computer and then copying all data from the Windows installation disc or from the ISO file to the USB (You can still keep the existing data intact). available on USB).

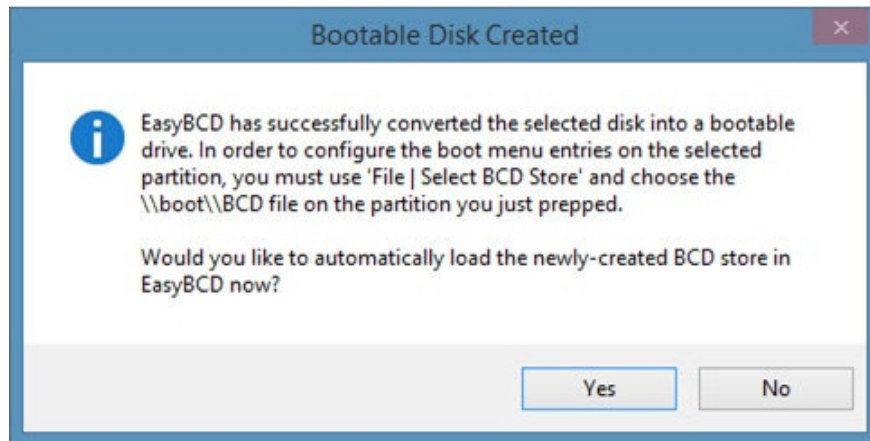

**Step 2:** Start the EasyBCD program, in the main interface, select the **BCD Deployment** tab , then select your USB from the **Partition** box , then click **Install BCD** (Figure below)

**Step 3:** Wait a few minutes while the program executes (Figure below)

**Step 4:** Once completed, click **Yes** to finish (Image below)

And so you can use this USB to install Windows while still keeping the data on that USB intact. It's truly wonderful, isn't it?
