

How to Create a Cocoppa Icon

Cocoppa lets you customize your phone with cute icons and wallpapers. If you want to make icons of your own, please read ahead! Many people are asking and others are deleting the app because they're too frustrated to continue. This...

Method 1 of 2:

Choose from gallery.

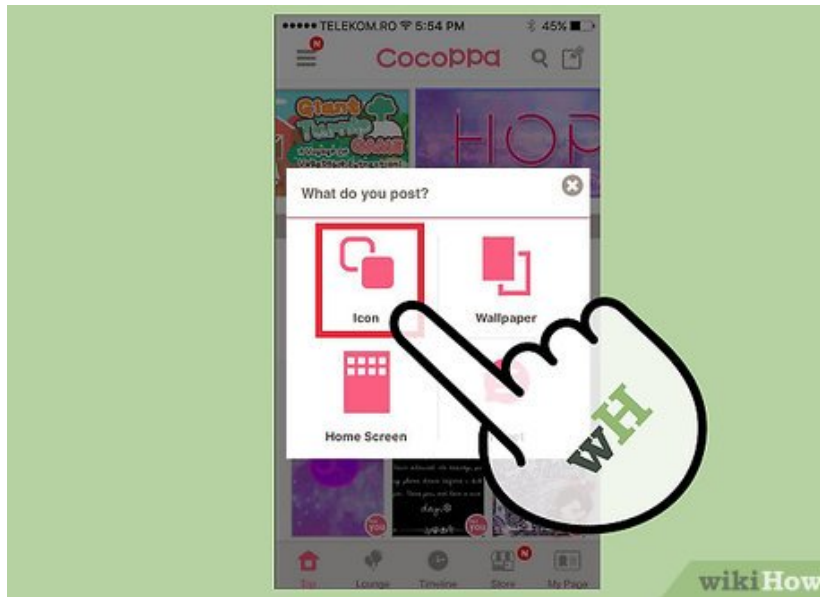

This is one of the quickest and easiest methods of adding an icon/wallpaper. If you have a picture in your gallery that you would like to make it into an icon than you will be done in a jiffy!

1.

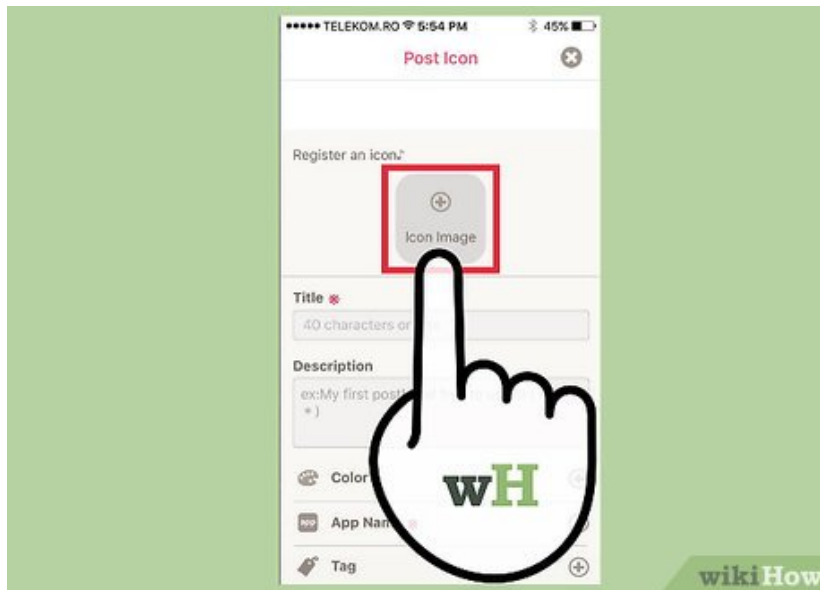

Click the button on the top right. If you have a picture in your phone already saved, log on to cocoppa. Once there, you should spot a button in the very top right corner that looks like a gray picture frame and a camera. Click that.

2.

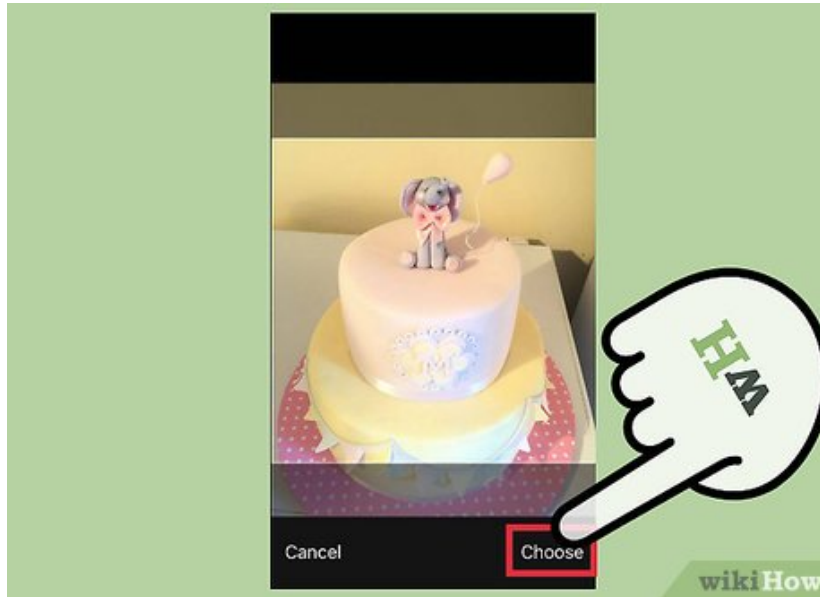

Choose to add an Icon or a wallpaper. (We're doing icons as an example).

3.

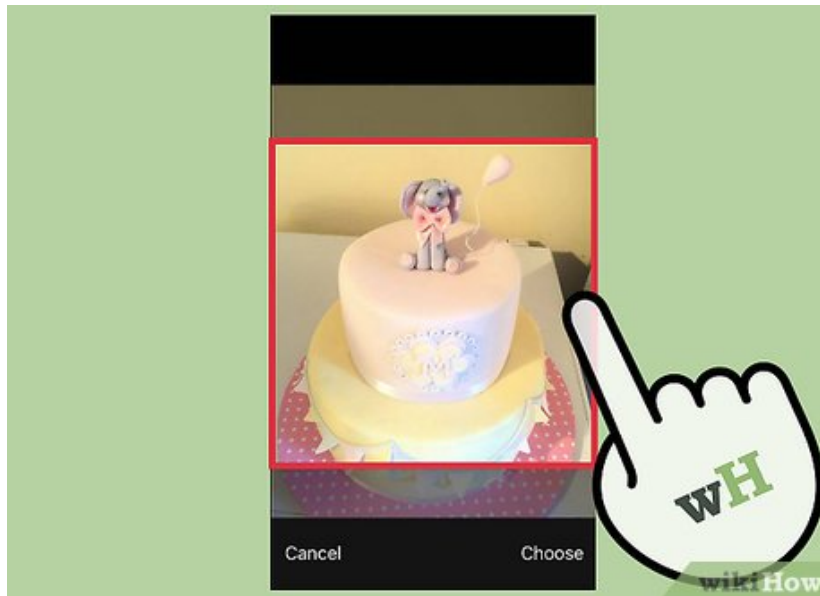

Tap the square that says "icon image". You will see it after you choose.

4.

Choose either *Use Camera* or *From Gallery*. *Use Camera* will enable you to take a picture at that moment and use it as an icon. *From Gallery* will transfer you to your galleries so you can pick a photo or picture.

5.

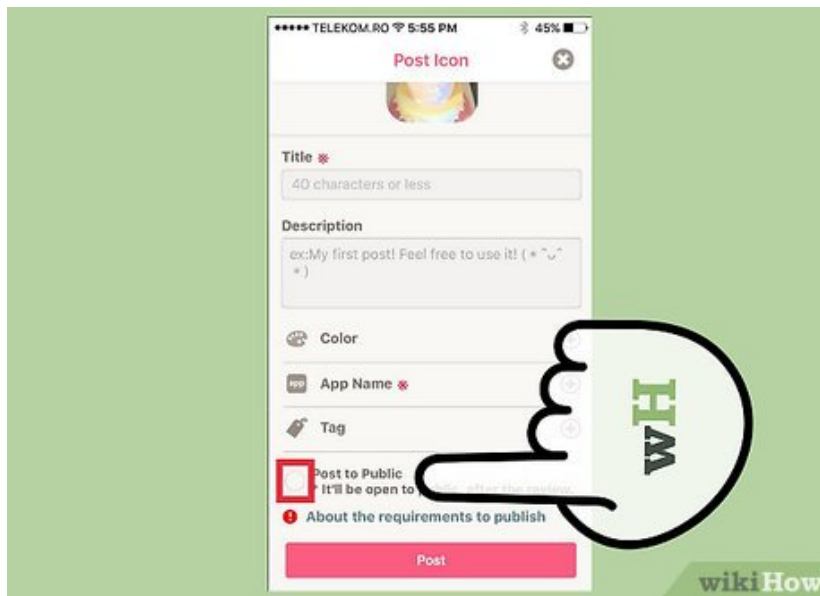

Find your photo. Crop if needed.

6.

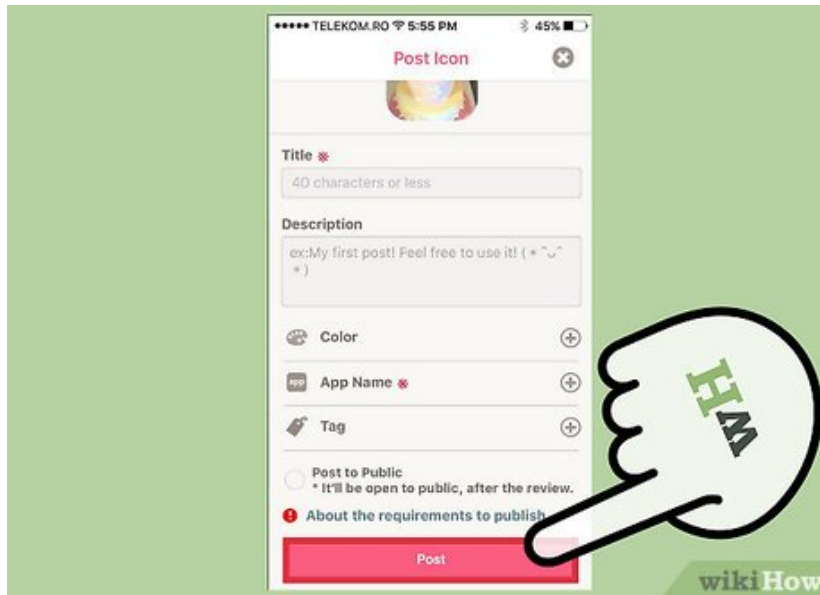

Enter the necessary information (such as a title and description and fill in the categories, colors, and tags as closely as it resembles the icon. (The color pink would be for a pink photo, or a Halloween category if it's a ghost or something.)

7.

Make it public or private. If you choose public, after a few hours (or days) of cocoppa's system checking if it's appropriate, it will be there for the whole world to see! (If it's approved, of course!) If private, that icon will only be available to you and to you only. There may be some waiting too. And note if Cocoppa's system doesn't like your picture for some reason, it will become private.

8.

After that, tap "Post" and watch it be scanned by Cocoppa. It may take a while, don't worry about it.

Method 2 of 2:

Make your own icon.

This may get complicated.

1.

Decide what Icon you are going to make. Do you want an icon for your YouTube channel? For your Facebook maybe?. After it's decided, you can either:

1. Go to Google and type in your app's logo. (Ex. YouTube Logo) then choose which one you want to use as a guideline.

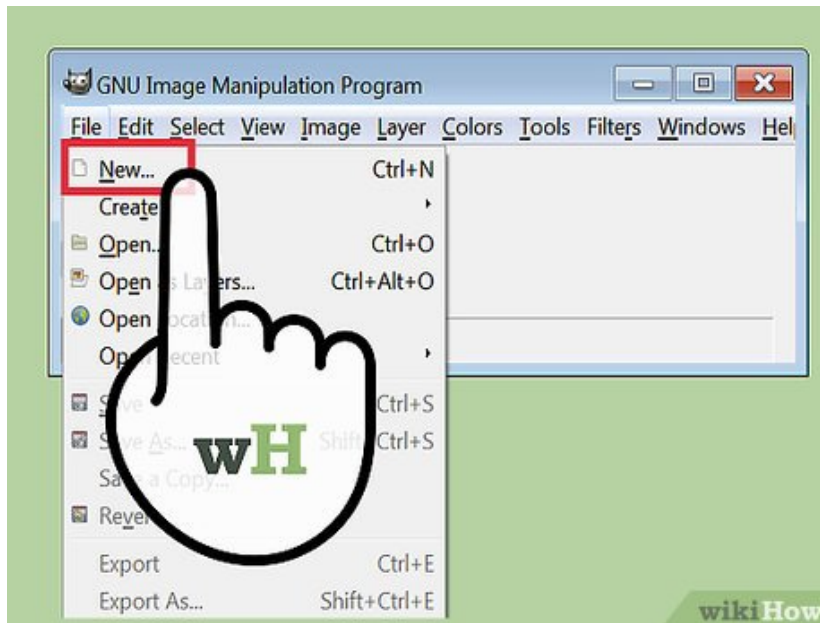

2. Go to "Sumopaint.com/app" or any drawing program you have (GIMP, MS Paint, Paint Tool Sai, ext.) And draw away how you icon should look like!

2.

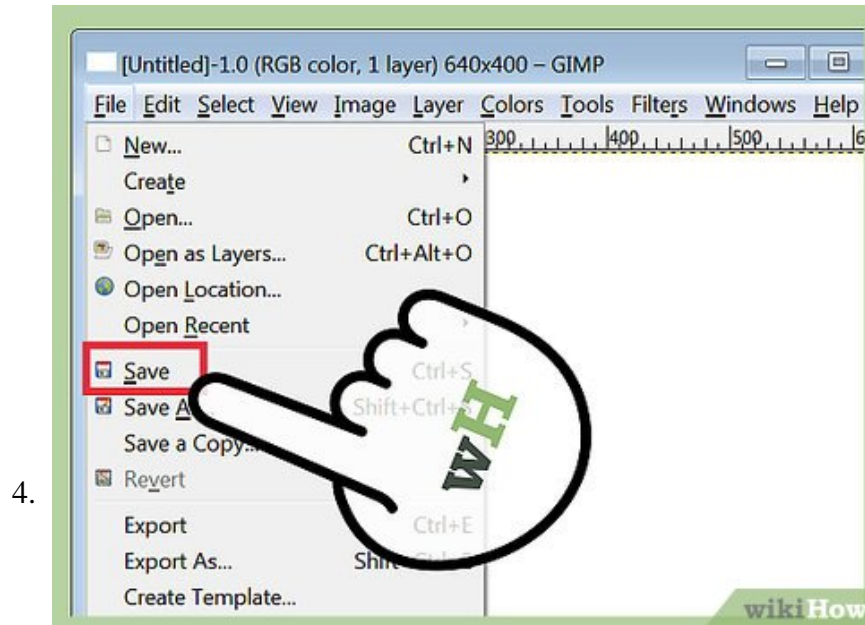

Go to a good drawing program. Do this after you have chosen a guideline from Google pictures. If you don't have one feel free to use Sumopaint.com/app online to do this.

3.

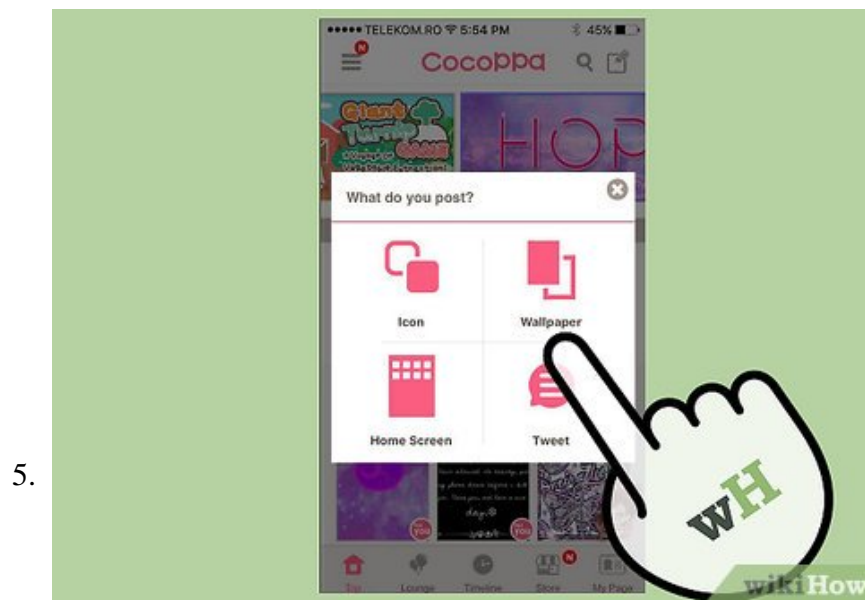

Load your "guideline"

1. Make a background layer, whatever color you wish or even transparent. Then, lower the guideline's opacity until you can somewhat see it but aren't distracted with other things such as color or shading.
2. Make a new layer on top of the guideline and begin tracing the guideline with your choice of color or brush.
3. Make new layers and color in the inside of the tracing you just made. You can delete your guideline by this point. After it is decorated and drawn as you wish, you can move on to the next step.

Save your beautiful artwork and move on.

Log in to Cocoppa either through your computer or your phone. Tap (or click) submit Icon/Wallpaper. Choose your either hand drawn, or traced decorated icon or wallpaper. Fill in the necessary information and then decide if you want it all for yourself, or if you want to share it to the world. Click submit, wait for Cocoppa to approve of your artwork for a few hours, and voila! You have beautiful custom made Icon/Wallpaper! If other people agree, you will get followers in no time! Maybe it will be used in a Home Screen, be the top of its category, or maybe you have so many followers because of it you will be in the top users!
