

# How to create a Discord account and log in to Discord

Discord can currently be used on both computers and smartphones, however this software does not yet support Vietnamese so it will be a barrier for gamers who are not good at English. Therefore, the following article will guide you to download, install, create an account and log in to Discord.

Although it appeared after voice chat services for gamers such as TeamSpeak, GameVox or Skype, at the present time Discord has attracted many gamers. With Discord, you can text and voice chat with teammates completely for free, especially it has the ability to group chat easily and quickly, while bringing it all into a modern interface.

## What is Discord?

Discord is a chat application, similar to programs like Skype or TeamSpeak, or professional social networking platforms like Slack. It is specifically aimed at video game players, providing them with ways to find each other, coordinate play, and chat while playing. It supports video calls, voice and text chats, allowing users to communicate however they want.

Discord is especially useful if you're trying to play PC games. This app makes chatting quite easy and offers a variety of search functions that can help you find other people and add them to your friends list for quick communication. A lot of people use Discord not only to talk to each other while playing games, but also as a tool to organize and maintain social communication.

Thanks to this range of functionality, users have also embraced Discord as a semi-public, forum-style community platform: Groups of players with common interests, such as fans of a particular game or studio, can create or join 'servers', both public and private, where many people can meet and socialize, chatting by text, video or voice calling.

While most of the servers are gaming-related, you can also find public Discord servers that focus on a variety of topics, including things like anime, cryptocurrency, self-improvement or just make friends. There's also nothing that requires a server to be created for gaming, so if you want a place in Discord to discuss a topic, you can always create a server. Handy places to find and search public servers include [Discord.me](#), [Disboard.org](#), and [Discordservers.com](#).

## Instructions for installing, creating an account and logging in to Discord on your computer

In the framework of the article, the Network Administrator will guide you how to download and install Discord, create an account and log in to Discord on a Windows computer. With other devices, you just need to follow the

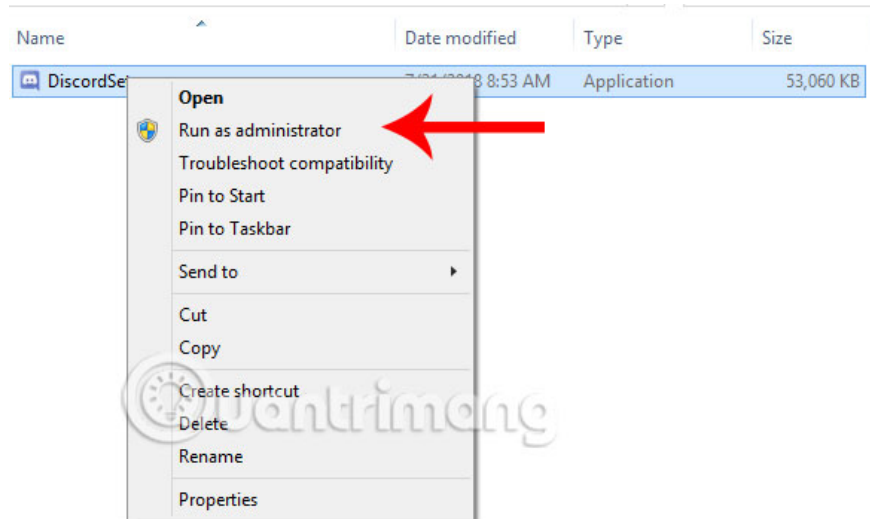

same steps.

### Step 1:

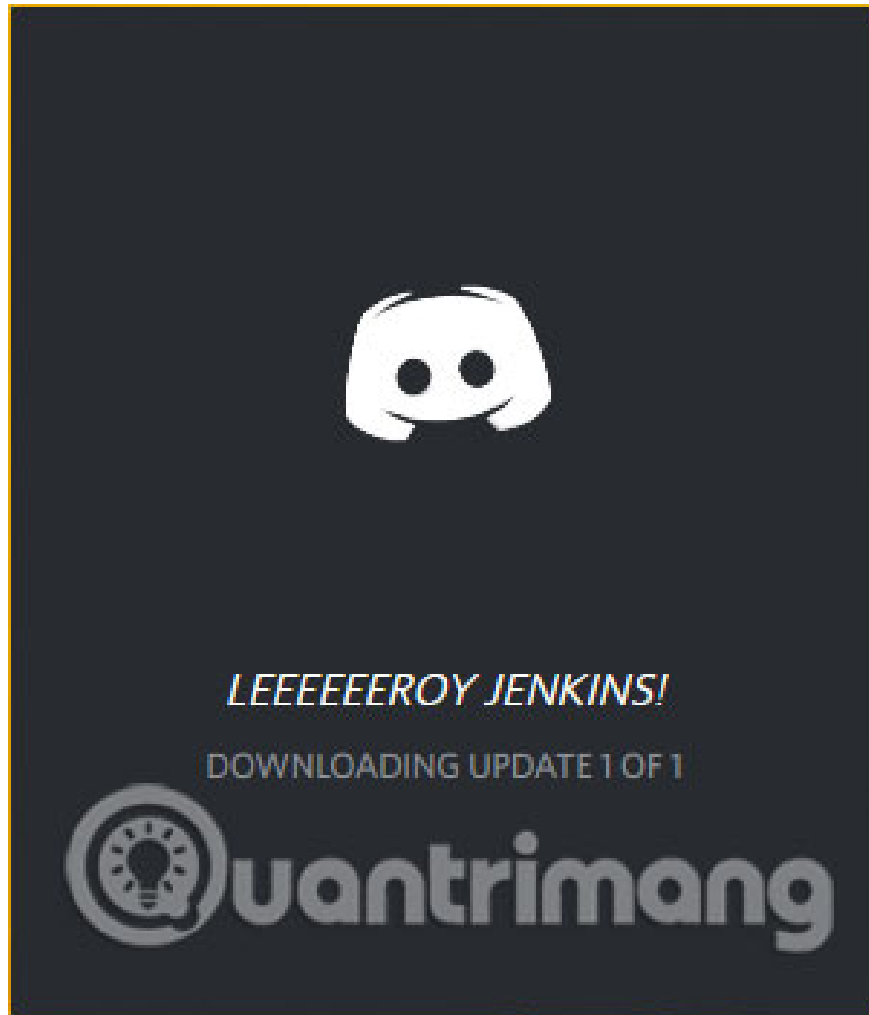

First, you must download Discord to your computer. Please select the version suitable for the device you are using via the link below.

### Step 2:

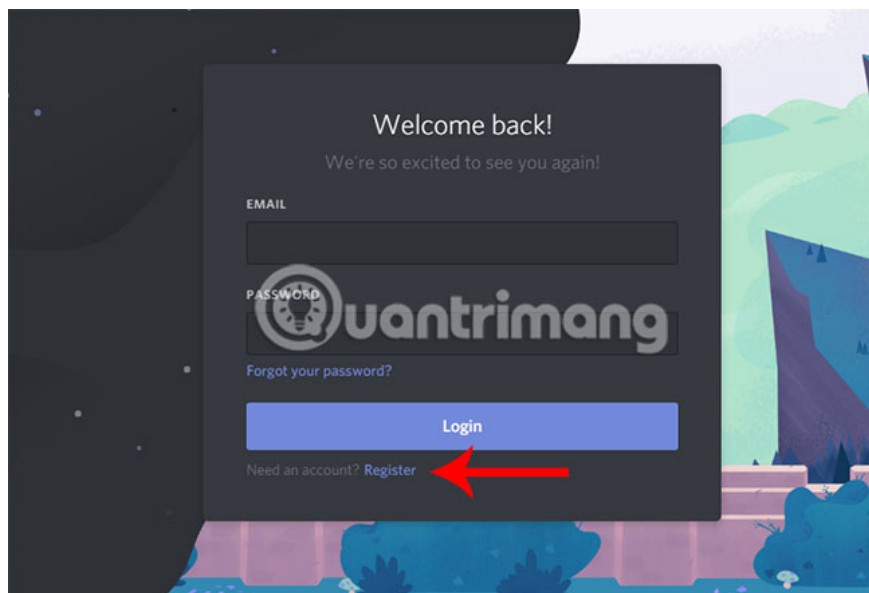

Once you have downloaded the file, run the installation file by right-clicking on the icon and selecting **Run As Administrator** .

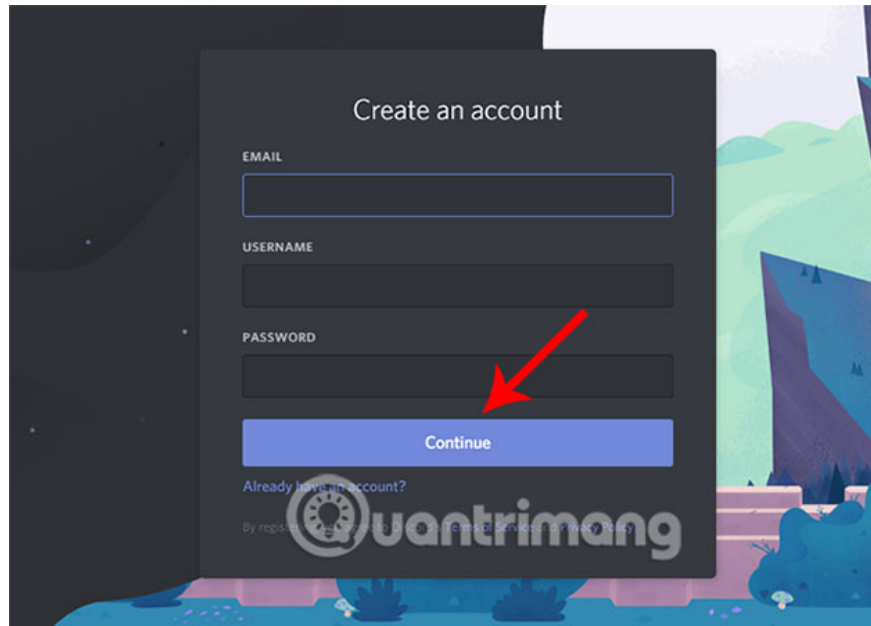

At this point, you will see a new interface appear telling you that you have to wait a few minutes for Discord to complete the installation process.

If the Discord panel appears on the screen like the one below, it means the Discord installation process was successful. The next thing is to create a Discord account. If you already have an account before, just enter your account information and click **Login** to log in. On the contrary, if you do not have one, select **Register** to create an account. Here, we choose Register to create a new Discord account.

The registration operations are very simple, you just need to name your account, enter your email and password in the **Create An Account** section and click **Continue** to finish.

As soon as the account is created, Discord will automatically log your account into the software.

Your remaining job is to create your own server, or join other servers in the Discord loading screen.

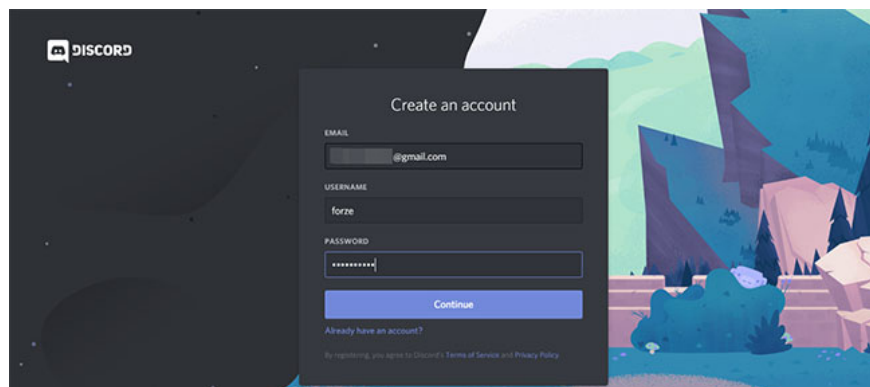

**Note:** Discord's two main features are text chat or voice chat. They are completely free, so you just need to create an account and log in to use it immediately. Besides, you can also create multiple servers without any limitations.

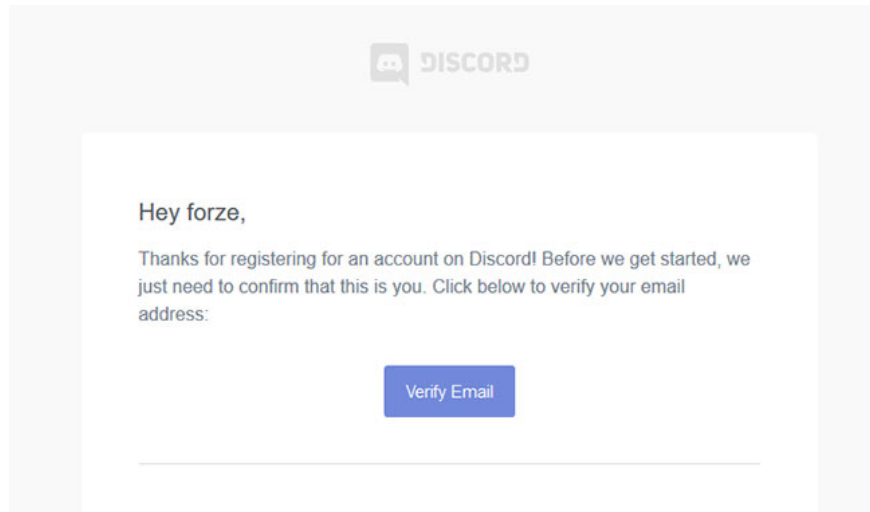

## Instructions for creating a Discord account via web browser

To create your Discord account in minutes, follow these steps:

1. Open a web browser and go to <https://discordapp.com/register>.
2. Fill in information including your email address, username and password.
3. After you fill in all the required information, click **Continue**.

4. Now, you have successfully created your Discord account.
5. You need to verify your email address before you can fully use your Discord account.
6. Open Discord email.
7. Click **Verify Email** to verify your email account.

8. Once you do that, you will finally be able to use your Discord account.

Following the steps above, you will easily create your own Discord account easily and then create a new one or join an existing server to communicate with your teammates.

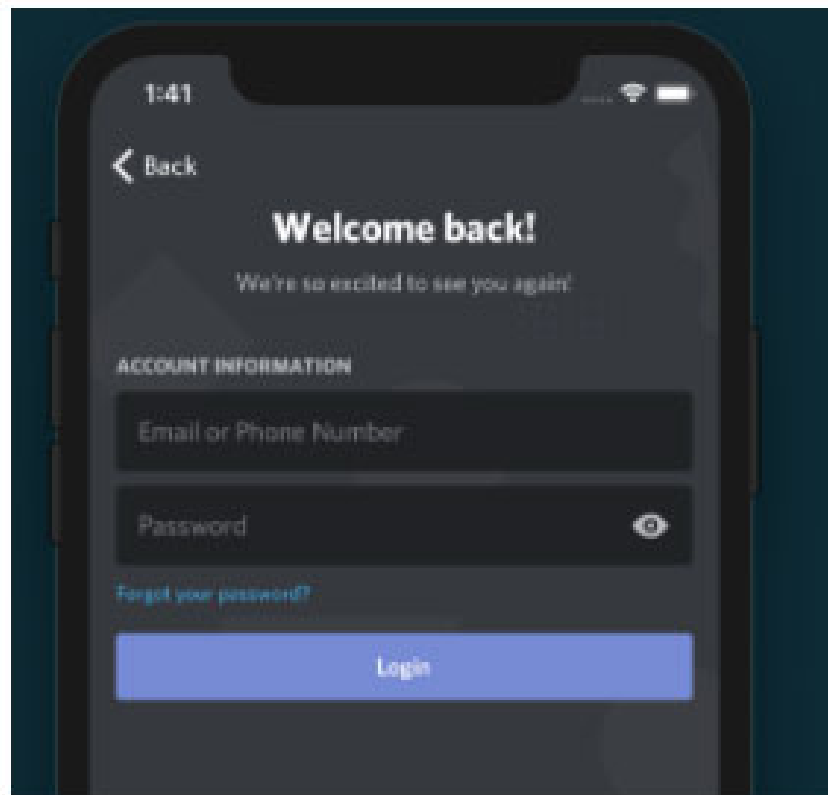

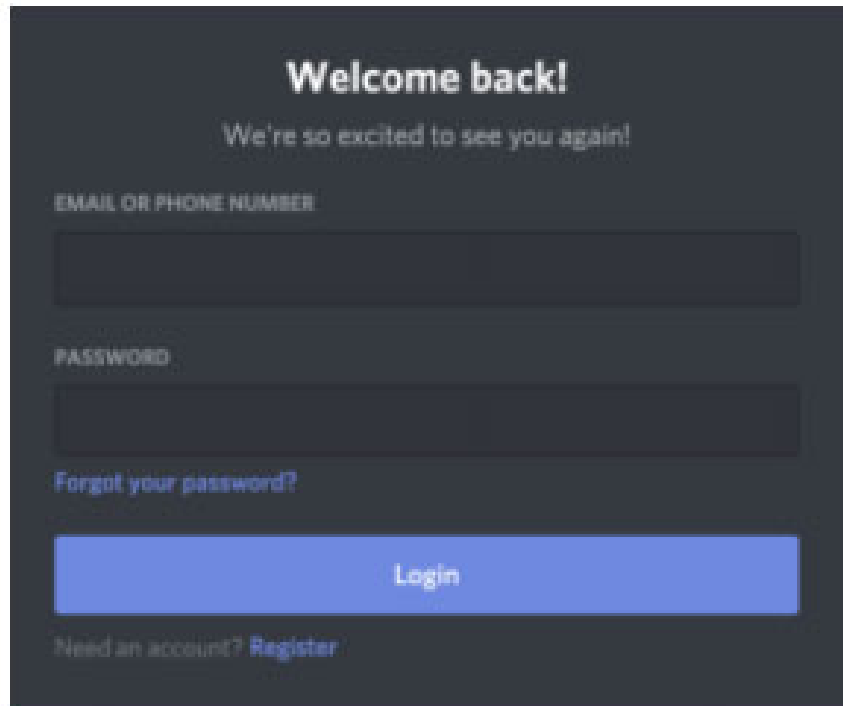

## **Log in to your Discord account**

If you're using a browser, start by visiting [https://discord.com/login!](https://discord.com/login)

If you're on a computer or mobile device, you can open the Discord app directly on your device!

Once you're on the login page, enter the official verified email address or phone number for your Discord account in the first text box.

**Note :** You will need to verify your phone number to your Discord account before using phone number login! In the second box, enter the password associated with your account!

## Login with QR code

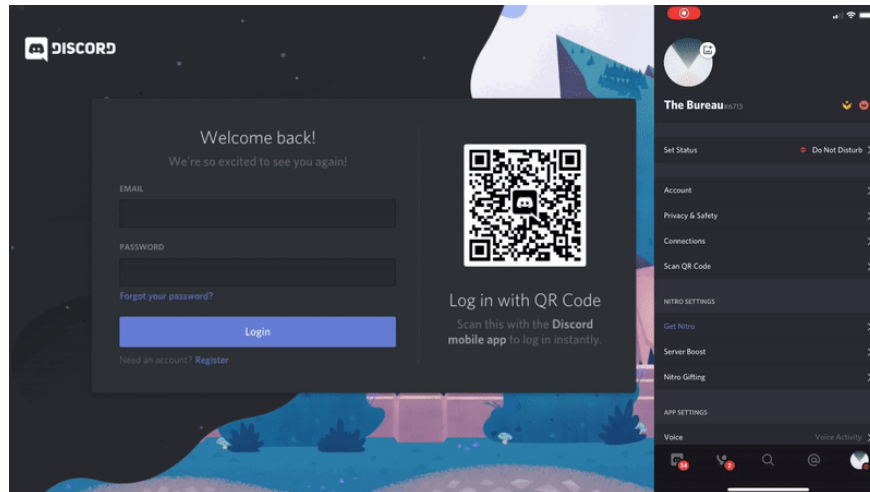

If you already have the Discord mobile app and want a quick, secure login, you can also use the QR code login feature!

To use QR code login, start by logging into your Discord account on your mobile device.

Then, open the **User Settings** menu in the Discord mobile app, then select the **Scan QR Code** option .

**Note** : The application will request camera access on your mobile device to scan the QR code!

Once the scan window opens, simply point the viewfinder at the part with the QR code on the screen, then you will be asked to verify your Discord login information on your mobile device.

**Note** : Never approve logins with QR codes that you did not create yourself! If someone else sends you a QR code that opens the login verification screen, press cancel immediately.

Thus, the Network Administrator has guided you how to install, create an account and log in to Discord on your computer in detail. Hopefully through this article you can more easily use this application, explore it yourself after creating a Discord account, you will definitely feel satisfied with what Discord brings.

Good luck!
