

How to create a free website with Google Sites

Google Web Sites is how Google allows users to create personal Google websites. Although it's not as easy as using Google Page Creator, this is a good online site builder. Google Web Sites offers a number of tools that you can't find at Google Page Creator. Once you are familiar with Google Web Sites, you will enjoy creating websites with this tool.

About Google Sites

Google Web Sites is how Google allows users to create personal Google websites. Although it's not as easy as using Google Page Creator, this is a good online site builder. Google Web Sites offers a number of tools that you can't find at Google Page Creator. Once you are familiar with Google Web Sites, you will enjoy creating websites with this tool.

One of the great features that Google Web Sites offers is the ability to organize web pages into categories. For example, if there is a series of pages about favorite baseball players, you can put them all into one category so you can easily find and adjust.

You can also control who can view and edit your Google Web Sites website. Licensing others, assigning them to perform different tasks on the site is an easy way to manage the site. In addition, you can also set only members of the group to view the site. Google Sites is suitable for those who want to create a private website, some licensees can view and participate in web page editing.

If you love Google's tools and services, then you will definitely like how Google Web Sites embeds all these tools and services into the web, such as connecting to Google Calendar, Google Docs, etc. You even You can also add things like videos to the Google Web Sites website.

How to create a website using Google Sites

Step 1: Set up a Google Sites website

Start building the Google Sites website by visiting the Google Sites homepage, then clicking the green button that says " **Create Site** ".

On the next page, fill in some of the following:

Site name

Your site will be located at this URL:
http://sites.google.com/site/
Site URLs can only use the following characters: A-Z,a-z,0-9

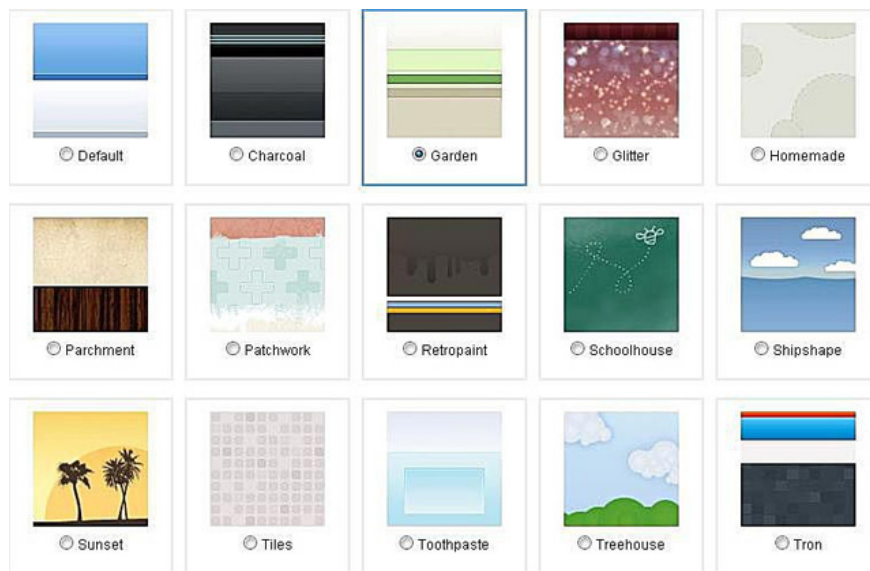

Site description **(optional)** enter a short description of this site

Mature content This site contains mature content only suitable for adults

Share with  **Everyone in the world** can view this site
  Only **people I specify** can view this site

1. Enter the website name, not just put your name, put a unique name that everyone wants to see.
2. **URL** : make the address name easy to remember so people can find it easily even if they don't bookmark.
3. **Describe the web** : talk a little about yourself and the website. Described for those who come to the site, they will see and see what.
4. **Adult content?** If the site contains adult content then you need to click this option.
5. **Who can view the website:** Leave the site public or only authorize certain people.

Step 2: Choose a theme for the Google Sites website

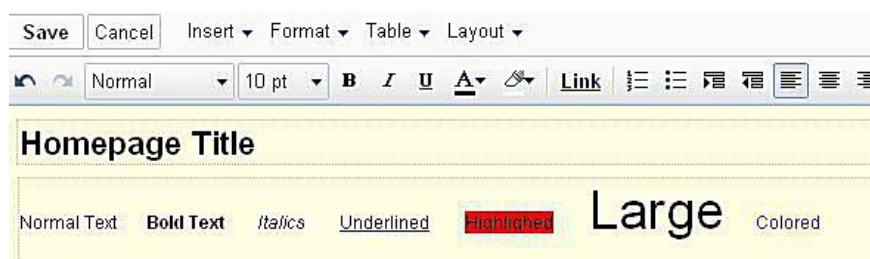

Google Sites provides a number of themes so that users can personalize their website. This theme will add color and personality to the site. You should choose a theme according to the theme of the website. Some Google Site themes only have colors without images. In addition, it also provides some other themes suitable for children's websites such as cloud theme and grass, sparkling theme, etc. Hopefully, Google will add some themes in the future to increase the experience. user.

Step 3: Start the first Google Sites website

After selecting the theme and setting up the Google Sites website, it's time to start building the homepage by clicking '**Edit Page**'.

Name the homepage and then explain to the readers about the site, what they will see and what you will provide them on your website.

You can change the text on the web with some tools on the Google Sites toolbar like:

1. Change font style
2. Change the font size
3. Highlight, italic or underline text
4. Change the font color
5. Mark text
6. Add links on the Web
7. Add a numbered or bulleted list
8. Backward

9. Right, left or center

When setting up instead, click " **Save** " to save. To see how the web page displays just copy the web address, log out of Google, and paste the address and bar, then press Enter on the keyboard. So you've created your own Google Sites website.

I wish you all success!
