## Instructions for creating a Hiren's BootCD on a USB/CD

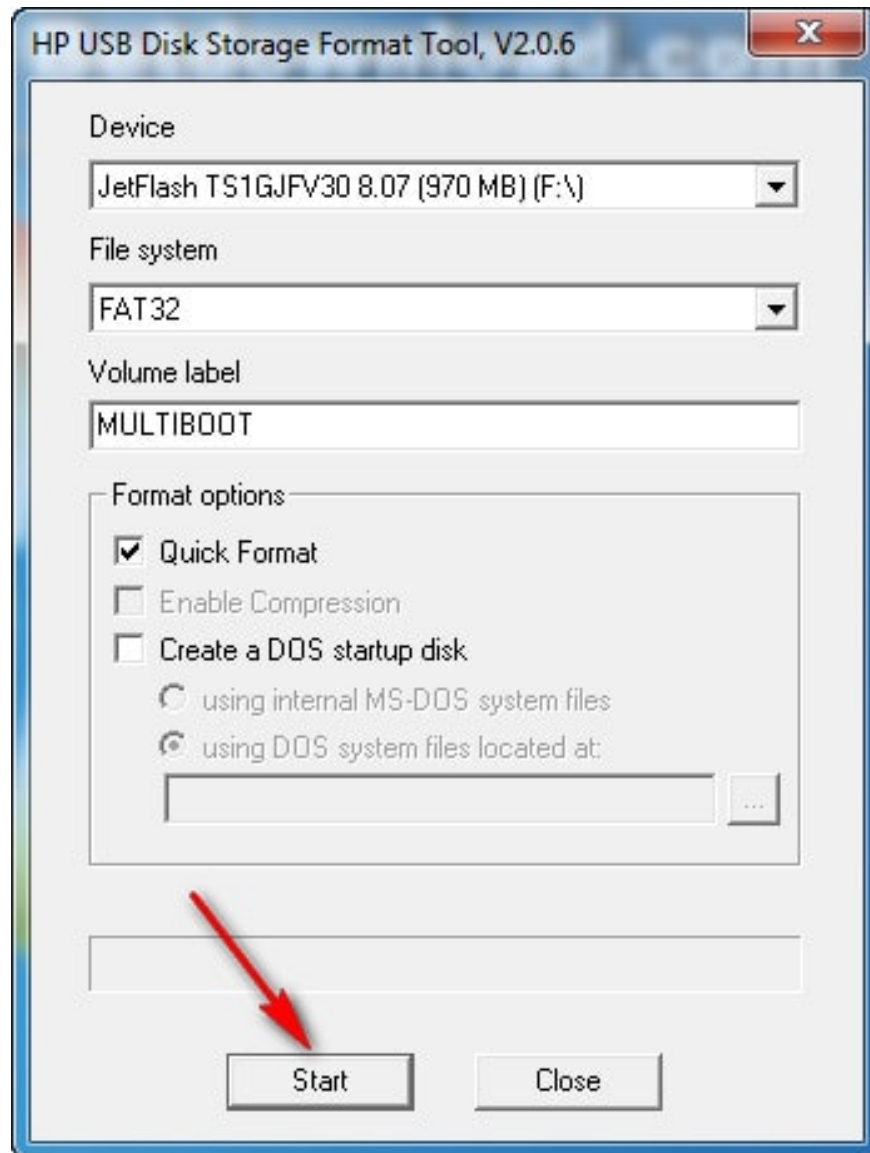

**Preparation:** You will need a USB drive with a minimum capacity of 1 GB or a blank CD.

*Method 1 : Using Grub4dos*

**Step 1:** Download **Hiren's BootCD** to your computer here: Download **Hiren Boot**

**Step 2:** Download and install Grub4dos on your computer. You can download the latest version of **Grub4dos** here: Download **Grub4dos**

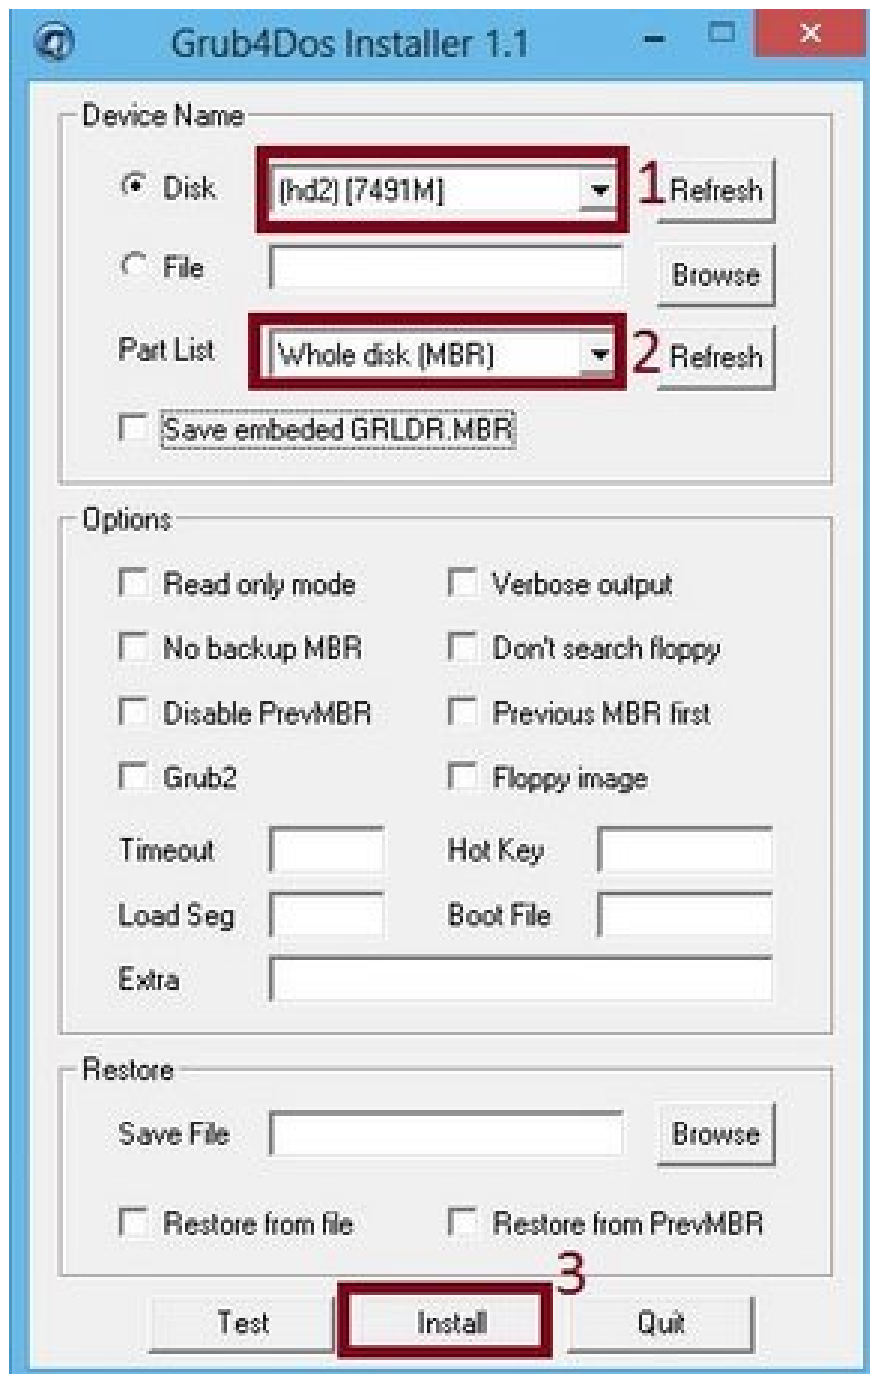

**Step 3:** Plug the USB drive into your computer to format it. It's recommended to use **HP USB Disk Storage Format Tool** software to format the USB drive.

**Step 4:** Set up a DOS environment on the USB drive using **Grub4dos**.

**Open the Grub4dos** file as Administrator. The program interface will look like this:

- Select your USB drive.
- **Select the Whole disk (MBR)** type . If not, click **Refresh** next to reload.
- Click **Install** to create DOS for the selected USB drive.
- Wait 30 seconds, then a black window will appear -> press Enter to exit this window.

**Step 5:** Copy the data to the USB drive.

The files include: **menu.lst** and **grldr** from **Grub4dos**  
**Windows Menu** , **autorun** , and the **HBCD** folder from **Hiren's BootCD**.

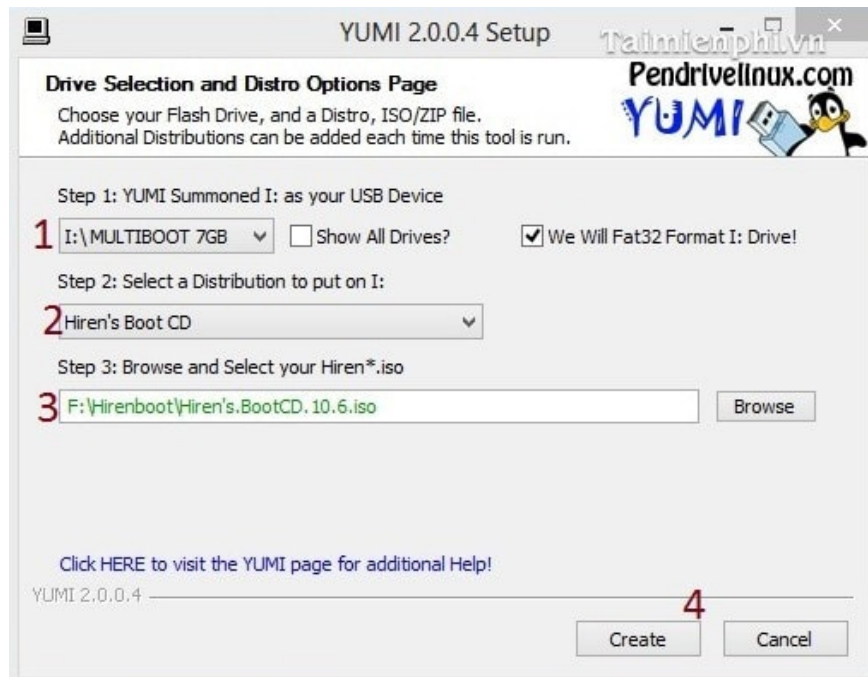

The above is how to create a Hiren's BootCD for a USB drive. For a CD, you can use BurnCDCC in Hiren's BootCD; simply run the file and point to the ISO file to let it run automatically, and you've successfully created it.

**Method 2 : Using yumi-multiboot**

**Step 1:** You can download the latest version of **Yumi** here: **Download Yumi**

## Step 2: Operating in Yumi.

- Select the **USB drive** you want to create.
- Select **Hiren's Boot CD**.
- Point to the Hiren's Boot .iso file.
- Click **Create** -> **Next**.

In the article above, we have guided you on how to create a Hiren's BootCD on a USB/CD, so you can use the USB to restore your computer by ghosting it in case of Windows operating system corruption, instead of using a CD, partitioning the hard drive, etc.
