

How to create a portable hotspot on Windows 11

If your Windows 11 PC has an active Internet connection (via Ethernet, cellular modem, WiFi, or another form), you can share that connection as a wireless signal as a mobile hotspot. via Wi-Fi or Bluetooth.

Here's how to set up a mobile hotspot on Windows 11.

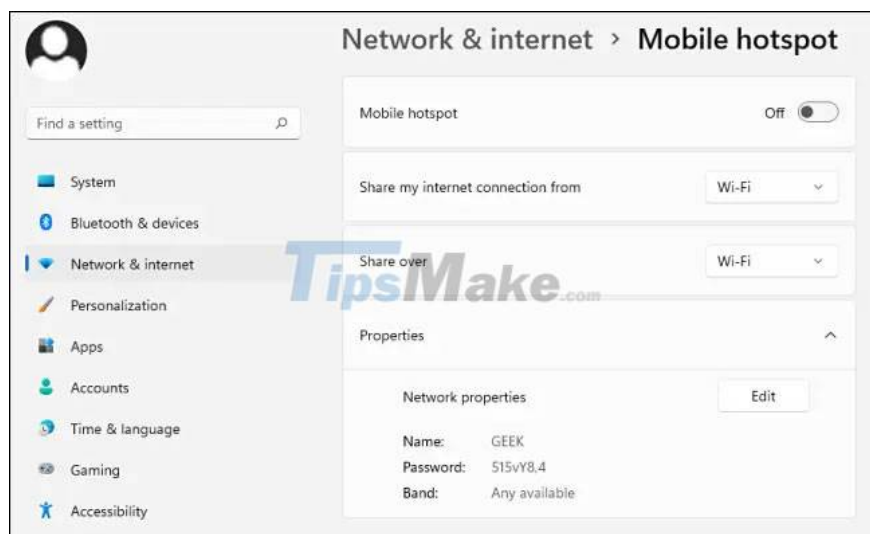

First, open the Windows Settings application by pressing the Windows + i key combination. Or click the Start button, enter the keyword 'Settings' in the search bar, then click the gear icon from the list of results returned.

When the Settings application interface opens, look at the list on the left and click on the item 'Network & Internet'. In the "Network & Internet" settings screen, which appears respectively on the right, click on 'Mobile Hotspot' (don't press the switch button).

On the Mobile Hotspot settings screen, you will see several options listed.

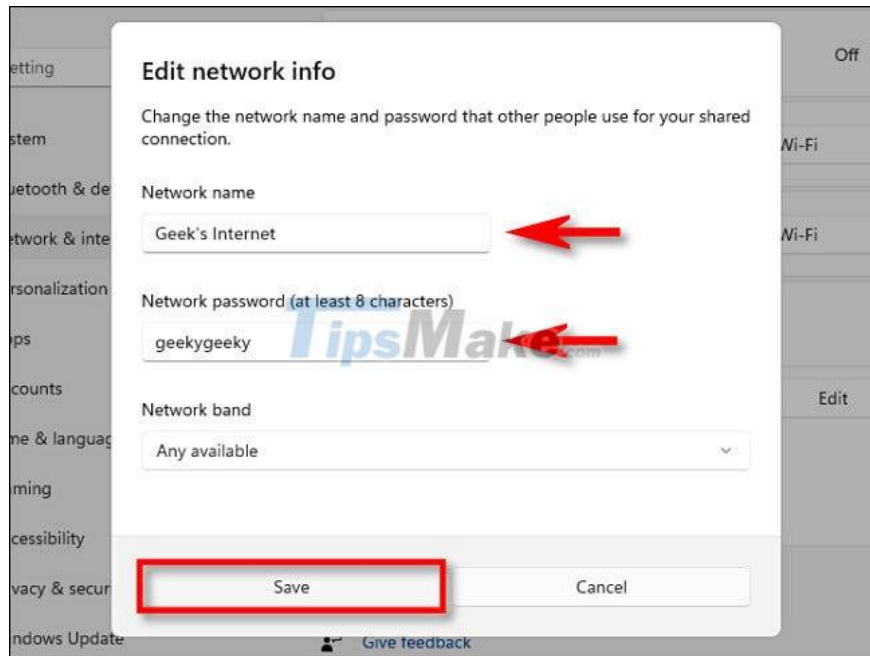

Before activating the mobile hotspot, it is best to configure how it works. First, click on the drop-down menu labeled 'Share my internet connection from' and select the internet source you want to share, such as 'Ethernet' or 'Wi-Fi'.

Next, click on the drop-down menu labeled 'Share Over' and select the method you want to use to share your Internet connection with other devices. Normally, you can choose 'Wi-Fi' or 'Bluetooth', but there may be another option based on the PC configuration.

In the 'Properties' section at the bottom, click 'Edit' and the 'Edit Network Info' window will appear. Here you can set the network name (similar to the Wi-Fi SSID), the password that people must enter to connect to your hotspot, and the Network Band (2.4 GHz, 5 GHz or "Any Available") if you're tethering over Wi-Fi. When the configuration is done, click 'Save'.

Finally, go back to the top of the Mobile Hotspot settings window and toggle the switch next to the 'Mobile Hotspot' section to 'On'.

Your computer is now ready to receive connections to the newly created mobile hotspot.

Connect to a mobile hotspot

Connecting to a Windows 11 portable hotspot is simple, especially if you're using Wi-Fi. Just go to your device's Wi-Fi settings (e.g. smartphone) and connect to the hotspot you just created above. Enter the password if available. In general, the operation will not be different from when you connect to a regular Wi-Fi network.

You can also connect to your hotspot using Bluetooth in the same way if the connecting device supports Bluetooth internet connection.

Hope you are successful.
