

# How to create a quick reply message template on iPhone

To quickly create a reply message template on iPhone, we can install the TapText application.

The iPhone can create instant messages to answer calls, if the user cannot hear the phone and respond quickly through available messages, or customize the response message yourself. And you can also create instant reply messages for incoming messages that can't be responded to, using the iPhone / iPad TapText app.

The application supports creating quick reply message templates for sending, when you cannot reply immediately. The content of the previous reply message that TapText supports does not limit the number, possibly a text message or a picture and text message. In particular, TapText is built into the frame for composing messages on the iOS device's message. Thus users can easily choose the content of the text message that was previously written. The following article will guide you how to use TapText on iPhone.

1. How to reject an unwanted call on iPhone
2. How to filter and block spam calls on iPhone
3. How to send messages to multiple contact numbers on iPhone
4. How to schedule sending messages on iPhone

## Instructions for using TapText to create iPhone message templates

### Step 1:

Users download the TapText application for iOS devices according to the link below.

1. Download the TapText iOS app

### Step 2:

In the main interface of the application, users click **the plus icon** to create a new message template. TapText application will support creating **2 types of messages** including Text and Image images.

Help

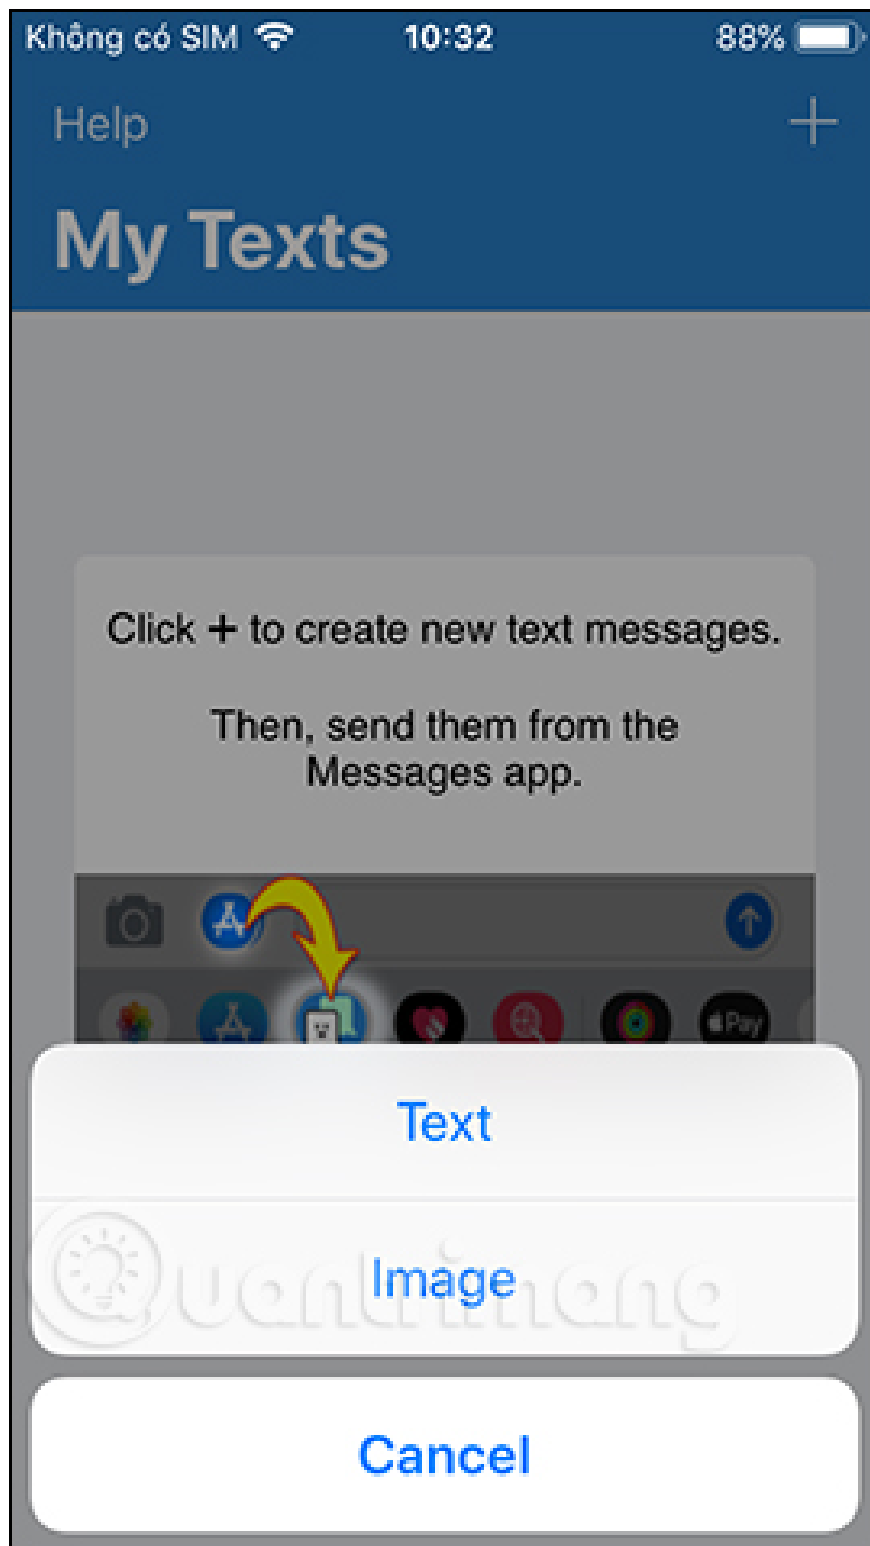

# My Texts

Click + to create new text messages.

Then, send them from the  
Messages app.

### Step 3:

With the text input interface, we just need to **enter the text of the message** to reply quickly when needed, click on Save to save. Back to My Texts interface will see the content of the message created. We can click **the pen icon** to edit the content if desired.

Trash icon to delete created message templates.
