

How to create a virtual email using Temp Mail on your phone

Temp Mail is an application to create virtual email on Android and iOS to limit email hacking.

Virtual email creation services are now of interest to many users to limit the ability to hack primary email. Online sites that create virtual email support are completely free and create multiple temporary emails at the same time.

Temp Mail is an application that generates random virtual emails on Android and iOS. Email addresses are different and do not overlap even if you create many times. Users just need to select any email to use and Temp Mail will provide immediately for us to copy to the clipboard. The following article will guide you how to use Temp Mail on Android and iOS.

3. Instructions to block mail senders in Gmail

Instructions for creating virtual email on Temp Mail

Step 1:

Users click on the link below to install Temp Mail application on Android and iOS.

1. Download the Temp Mail Android app
2. Download Temp Mail on iOS

Step 2:

Open the application and the user will be asked if you want to receive a notification on Temp Mail. We will then see **the email address** provided randomly with the characters constantly changing. If you want to change to another email address, click **the Change button** .

Immediately you will be provided with a new email address.
