

How to create a virtual machine in Windows Server 2012

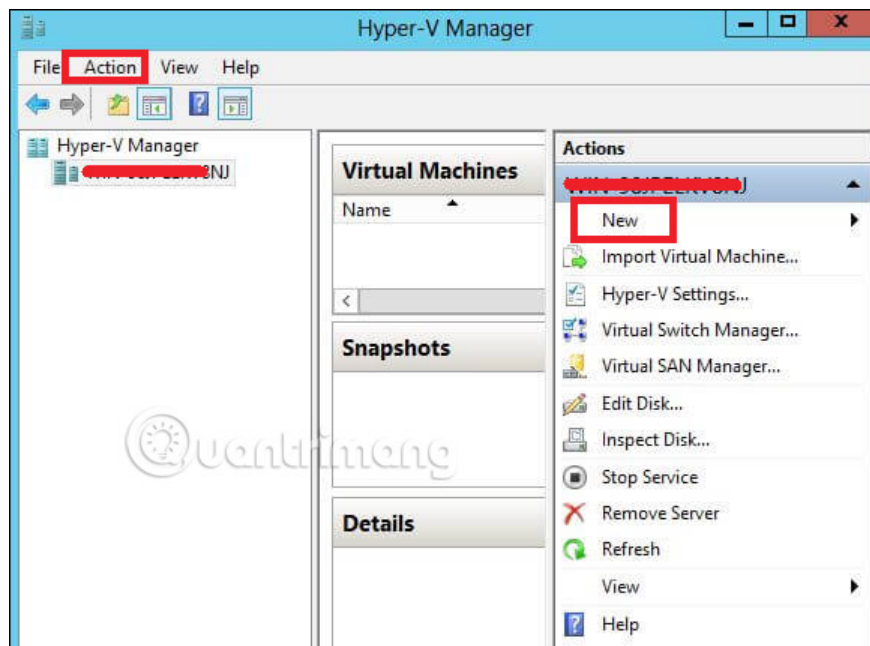

In this article, we will look at how to create a virtual machine. First, you need to open the Hyper-V manager and then follow the steps below.

In this article, we will look at how to create a virtual machine. First, you need to open the Hyper-V manager and then follow the steps below:

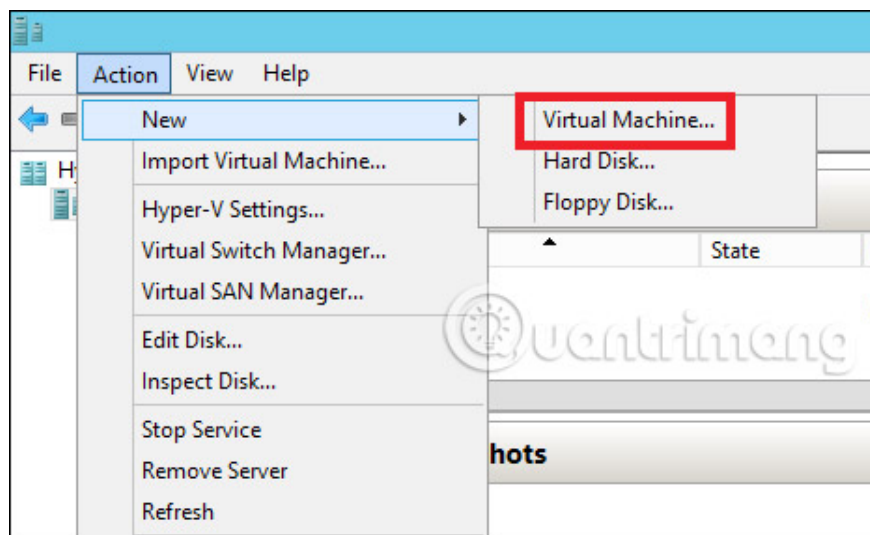

Step 1 - Open " **Server Manager** " and then click " **Hyper-V** ".

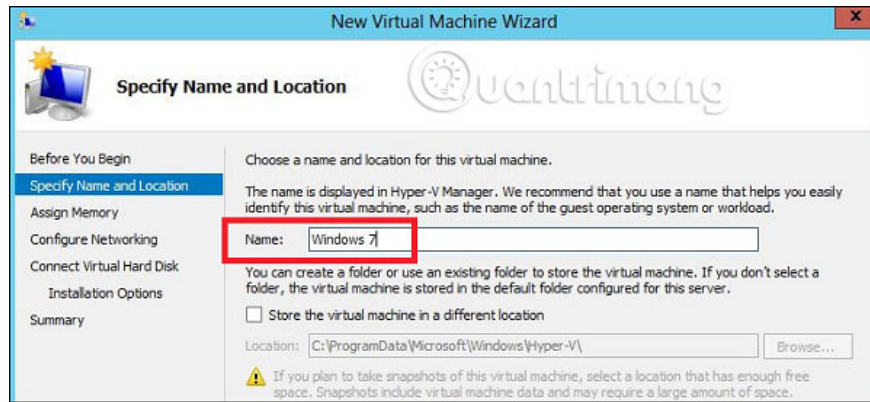

Step 2 - Click ' **New** ' on the right panel or click the **Action** button in the options as shown in the screenshot below.

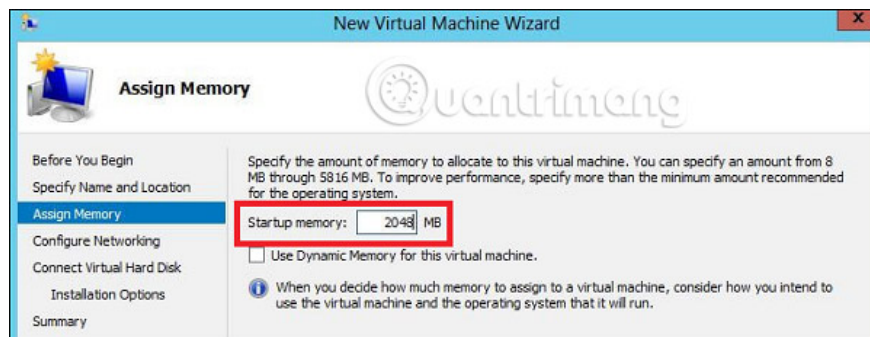

Step 3 - Double-click the **Virtual Machine** option as shown in the figure below.

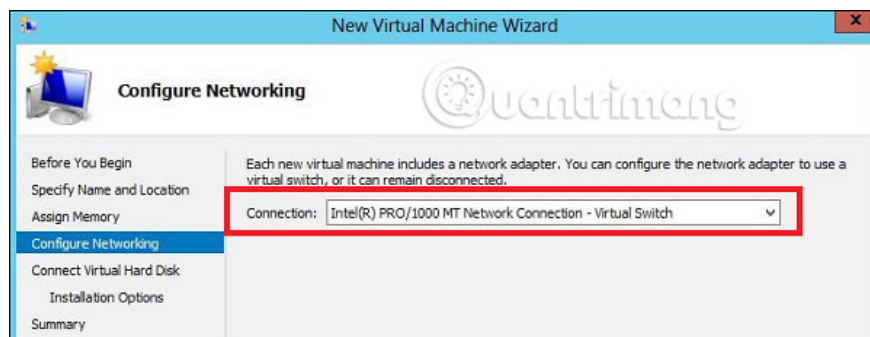

Step 4 - A new table will be opened. Type the name of the new virtual machine and then click **Next** .

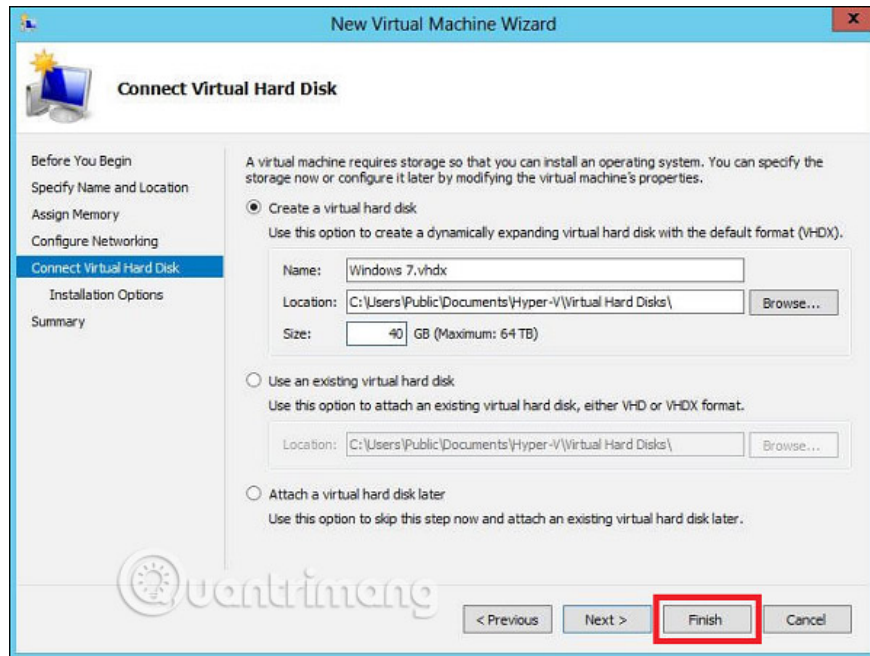

Step 5 - A new table will open and this is where you must specify the memory. Remember that you cannot select more memory than you have in the system.

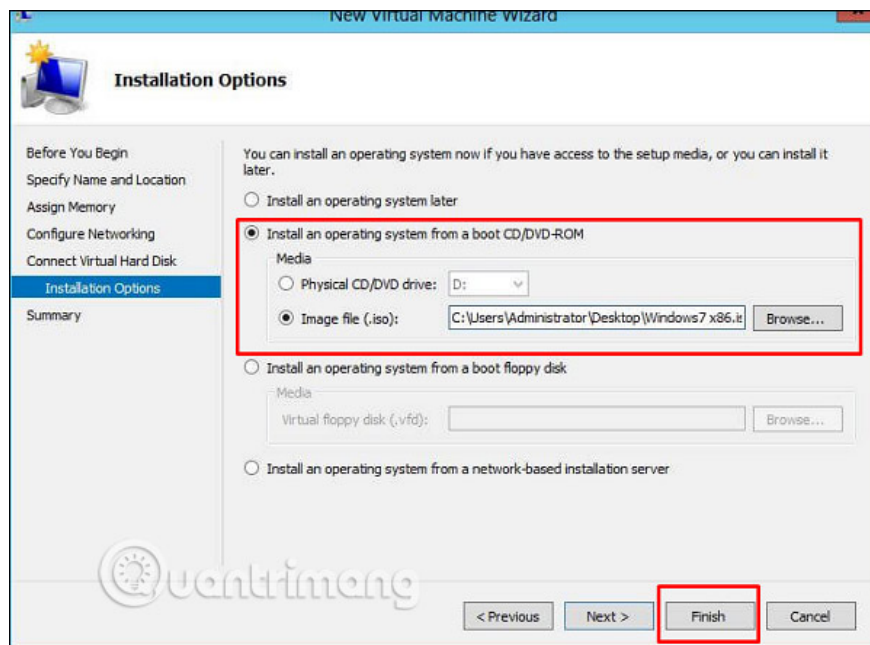

Step 6 - In the **Connection** box, select the physical network adapter and click **Next** .

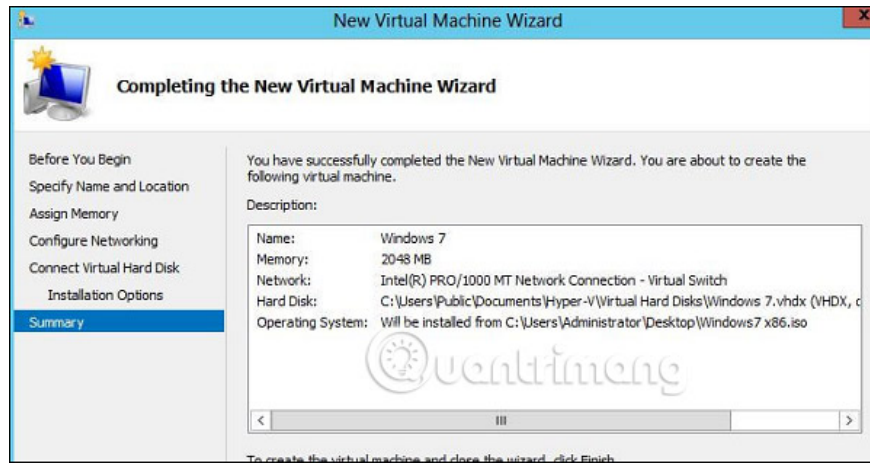

Step 7 - Now it's time to create a virtual hard drive. If you already have a virtual hard drive, select the second option.

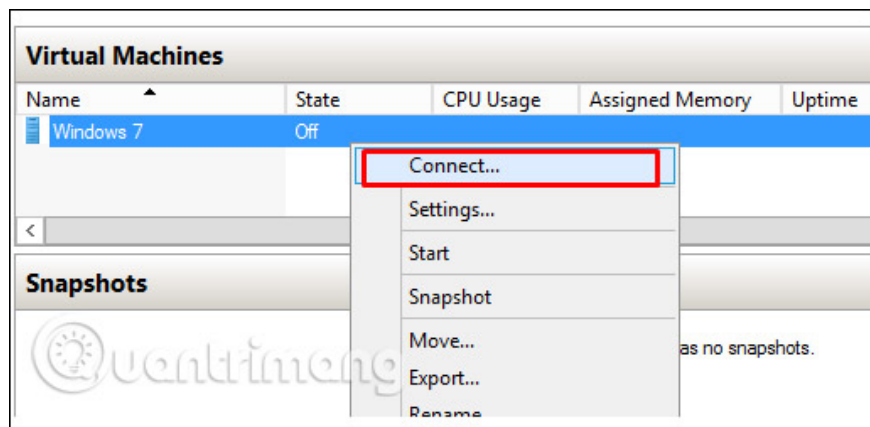

Step 8 - Select the ISO image to be installed and then click **Finish** .

Step 9 - Connect to the virtual machine. To do so, right-click on the virtual machine name and then select **Connect** .

Step 10 - After that, your ISO installation will continue.
