Instructions for setting up VPN on Windows 10

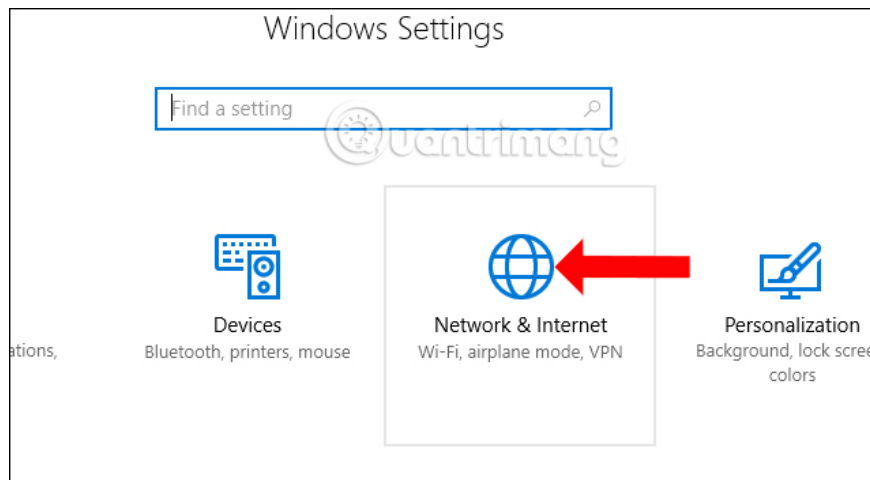

Step 1:

Click **the Start button** on the interface and then click on **Settings** .

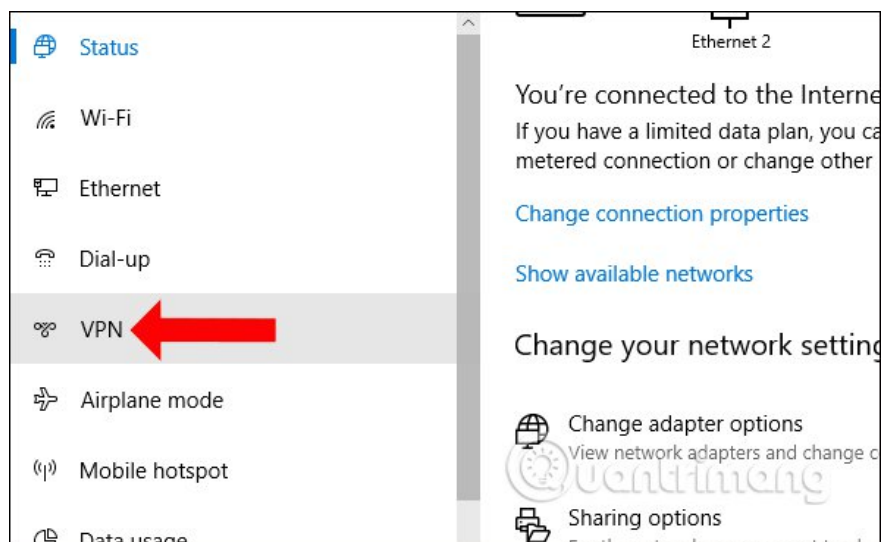

Step 2:

In Windows Setting interface, click on **Network & Internet** section .

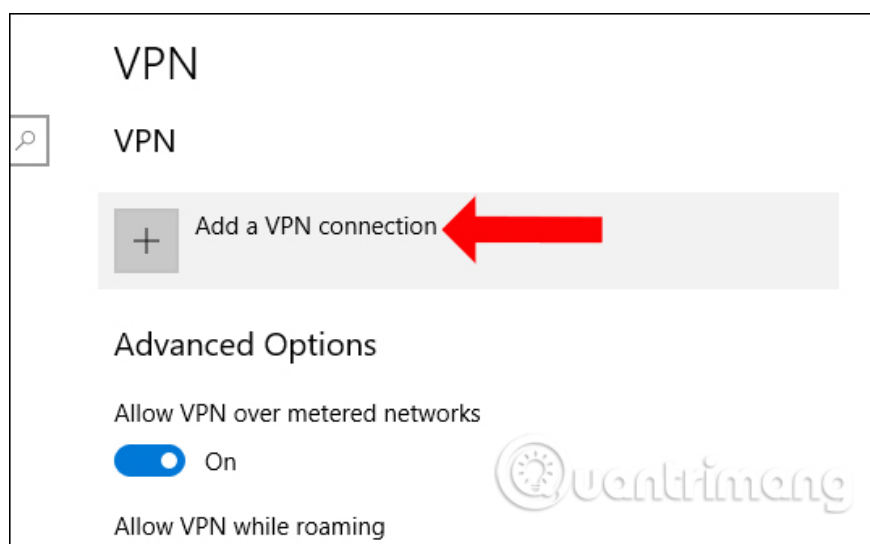

Step 3:

Switch to the new interface. In the list on the left of the interface click on **the VPN entry** .

Then look at the content on the right to see some settings to create a VPN, select **Add a VPN connection** .

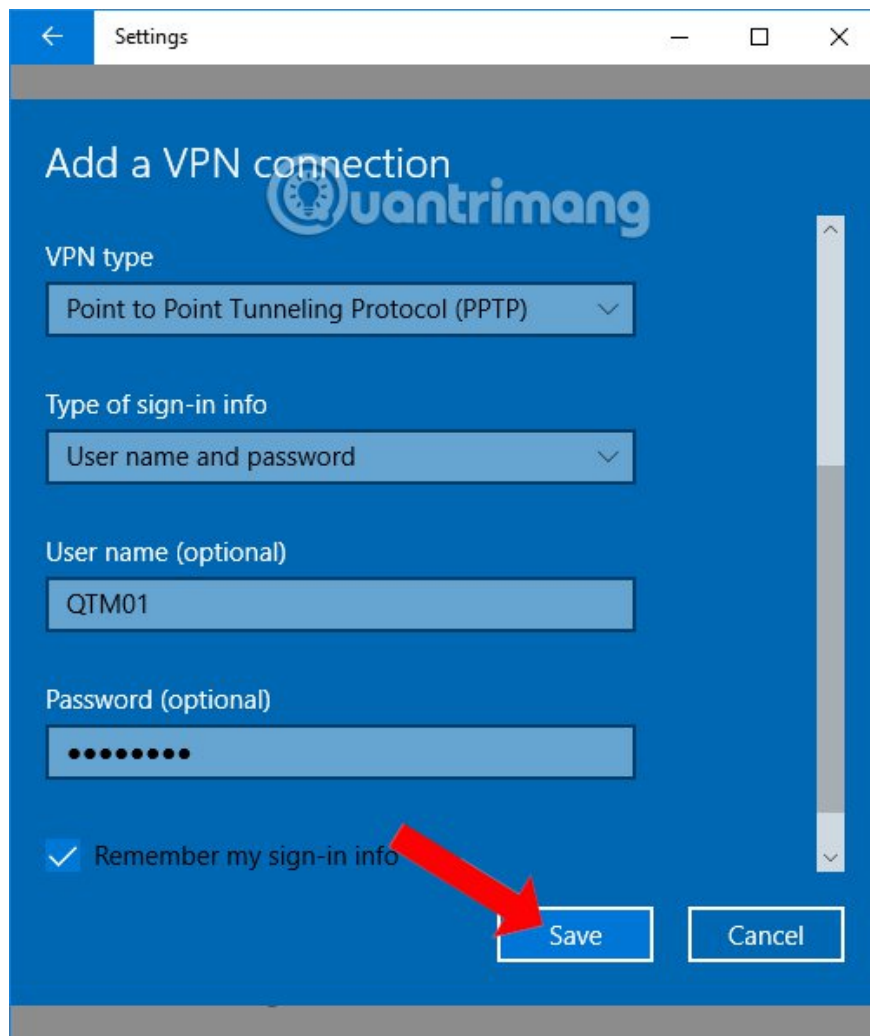

Step 4:

Appears interface Add a VPN connection. Here we will need to fill in some information including:

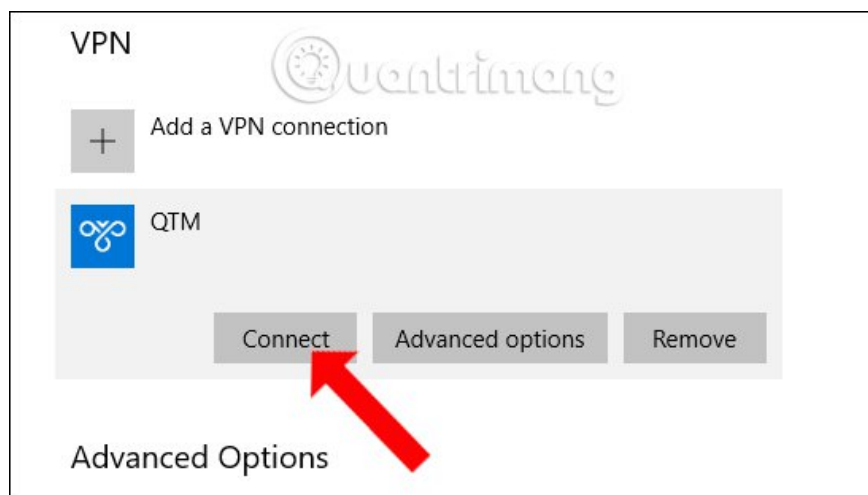

1. VPN provider: click Windows (built-in).
2. Connection name: select the connection name you want.
3. Server name or address: enter the server name or IP address of that server.
4. VPN Type: select Point to Point Tunneling Protocol (PPTP) or L2TP / IPsec with pre-shared key.
5. Type of sign-in info: select Username and password.
6. User name: username.
7. Password: password.

Finally click Save to save. In the case of using a personal computer, to remember the login ID and password each time you connect, select Remember my sign in information. If the public computer in the office is removed, it will ensure privacy.

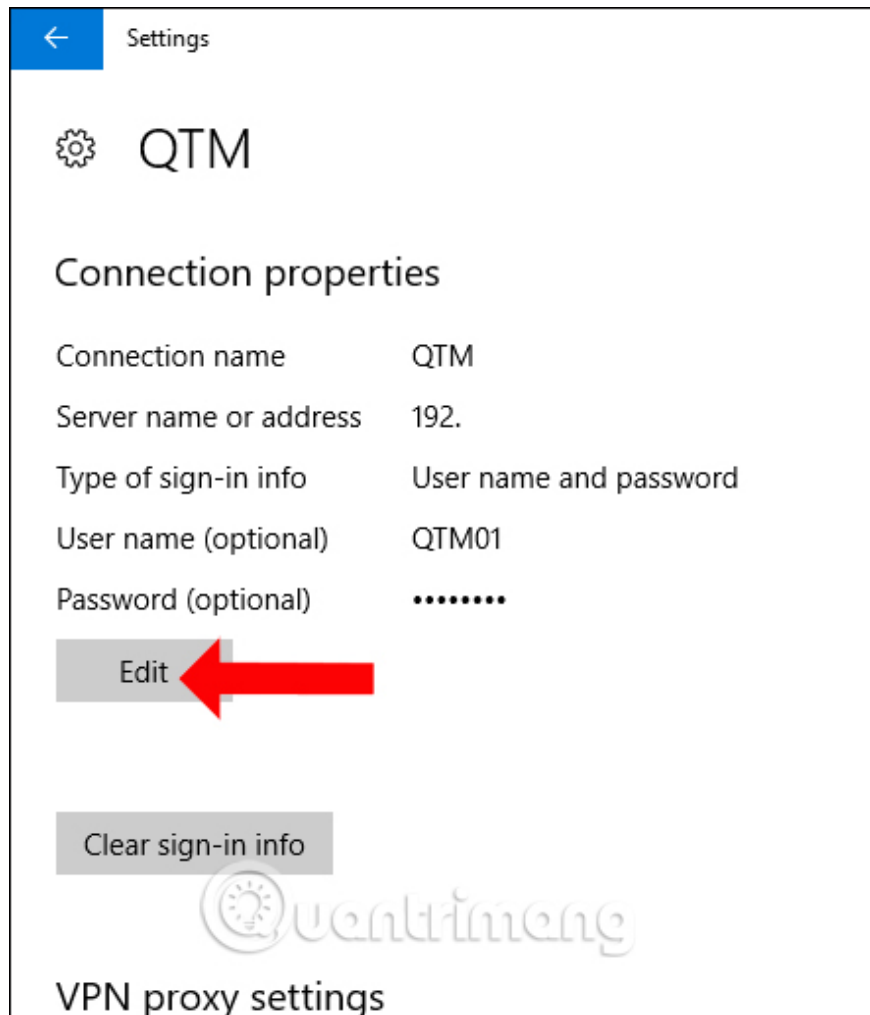

Step 5:

Go back to the VPN interface on Setting you will see the newly created VPN network. To connect to this network, just click and click on **Connect** .

In case you want to change the information of this VPN, click **Advanced options** , then click the **Edit** button to edit.

So you can create a VPN virtual private network right on Windows 10 by editing some settings on Settings. However, using this VPN also should not be done too much, because it may be related to safety issues.
