

# How to create an animation on iPhone using Boostr

Boostr is an application that supports animation on iPhone. You can choose videos to create animations or use still images with additional unique effects that the application provides.

Animation always draws attention to viewers, by interesting details in the image. Currently, there are many software, services to support creating Gif images such as the famous website Giphy, or recently the animation image creation software Plotagraph in which the Network Administrator has introduced to readers.

In this article, we will introduce you to the application of creating animation for iOS devices. Boostr is an application that creates animations from still images or videos, depending on the user selected. After that, you can insert some unique animation effects that the application provides. Especially, Boostr allows users to get photos from Facebook, Instagram or available in albums to edit images. So how to create Gif image on iPhone with Boostr like? The following article will guide you in detail.

## Boostr creates animations from videos on iPhone / iPad

1. Download the Boostr iOS app

### Step 1:

After downloading the application to the device, we start to use it. First, the application will require users to allow the **use of Micro** , click **OK** to agree. Next to **use Camera** on Boostr, click **OK** . Finally, choose whether you want to receive notifications from the application or not.
