

How to create and share iCloud photo album on iPhone or iPad

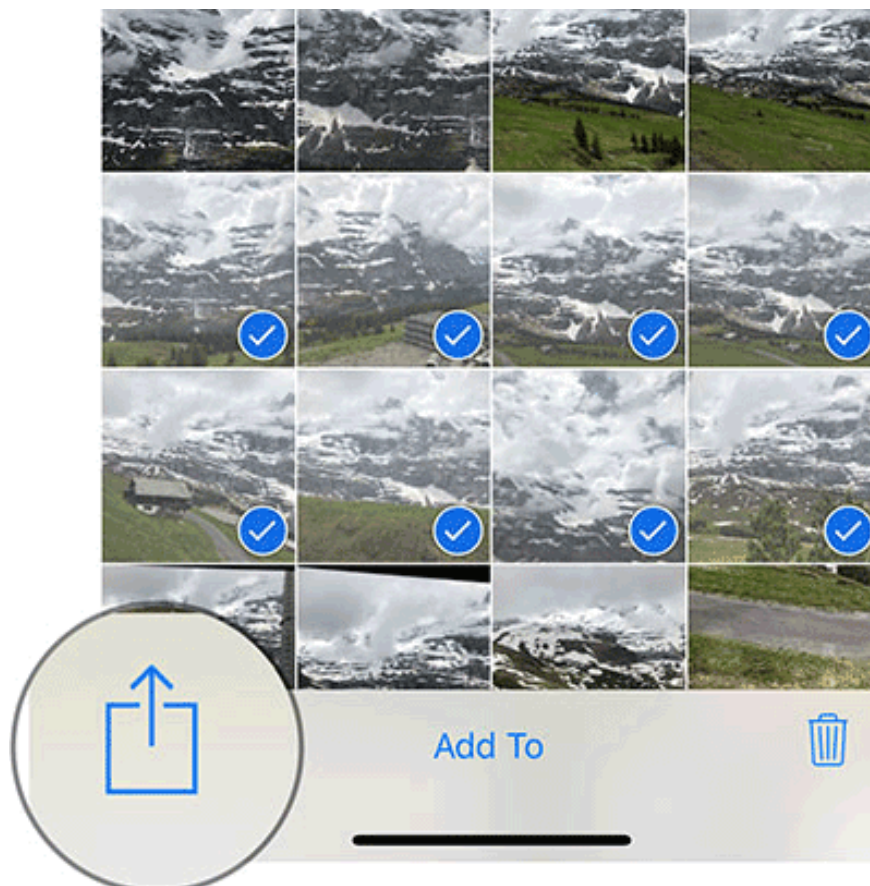

With iOS 12, you can create iCloud photo album and share it with friends and relatives on iPhone and iPad. Besides providing safe storage for beautiful photos, it is also a great tool to help you connect with people!

With iOS 12, you can create iCloud photo album and share it with friends and relatives on iPhone and iPad. Besides providing safe storage for beautiful photos, it is also a great tool to help you connect with people!

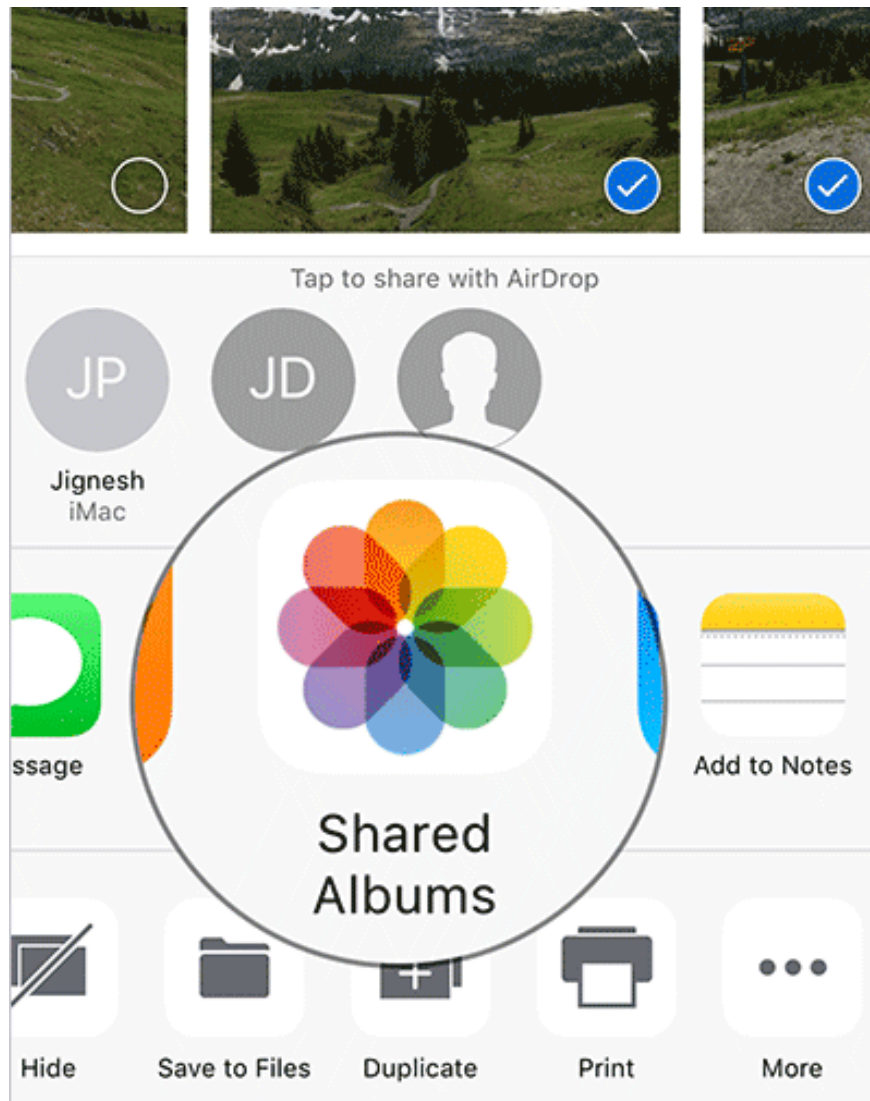

Photos app adds iCloud album creation feature to share with family and friends. So if you have memorable pictures and compelling videos, you can create an album to safely store and share it with everyone.

To get started, you need to enable the 'Shared Album' feature for your iOS device. To do so, go to Settings> Photos> then turn on the switch next to Shared Album.

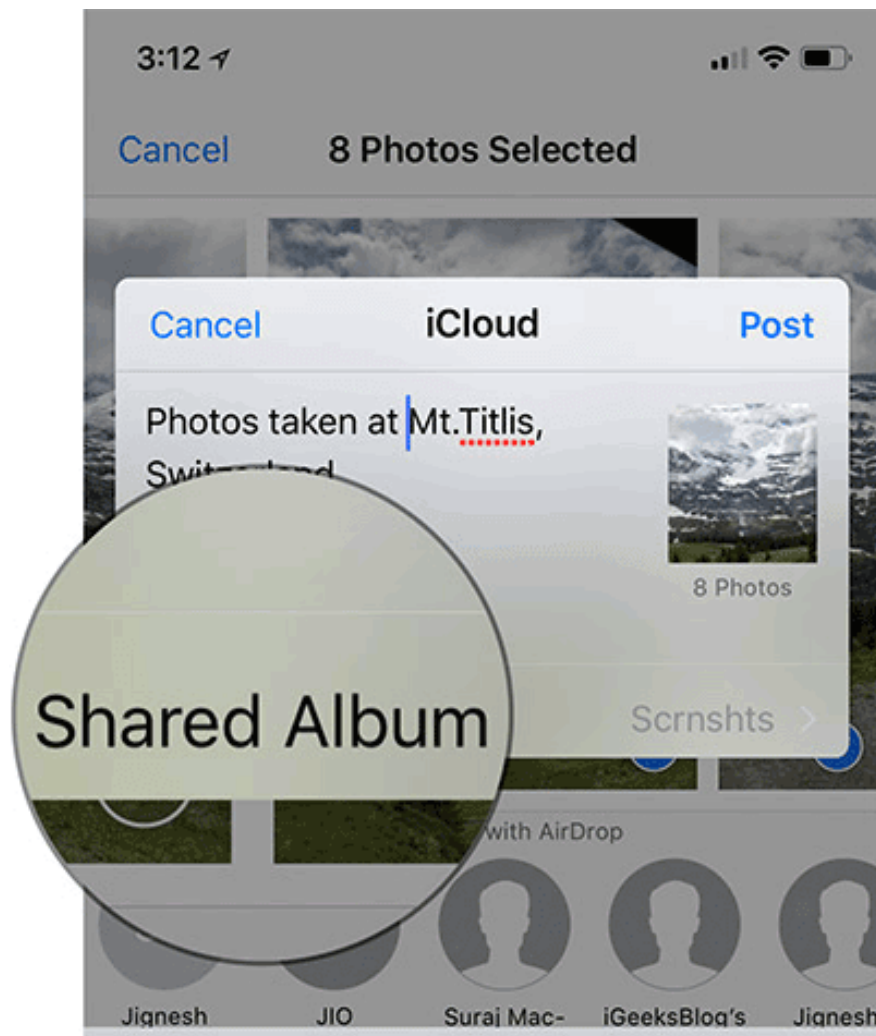

Step 1. Open the **Photos** app> **select the photo or video** you want to share> click on the **share** icon.

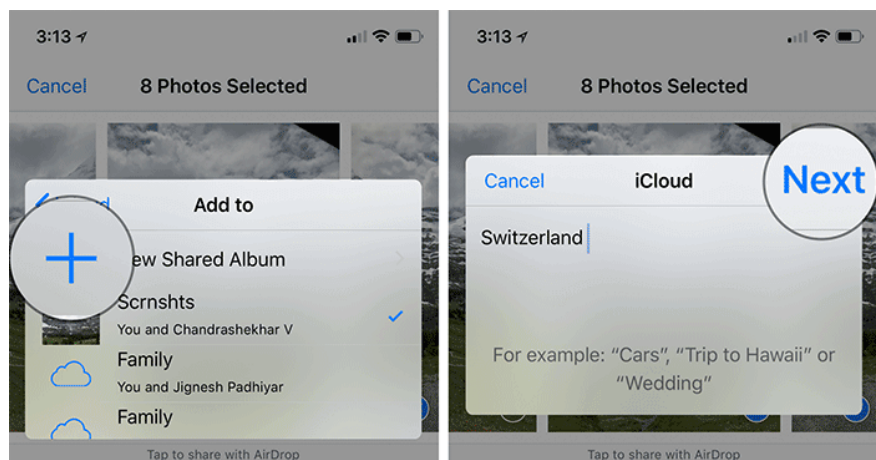

Step 2. Next, when the sharing table appears, select ' **Shared Albums** .'

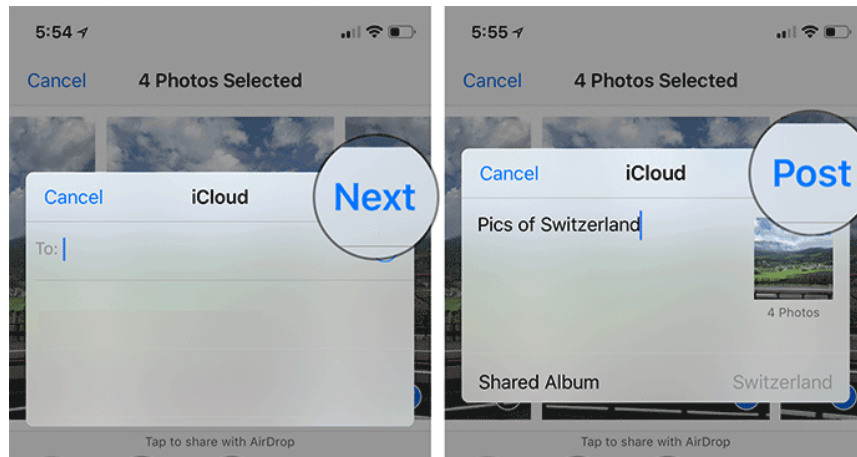

Step 3. Click on **Shared Album** .

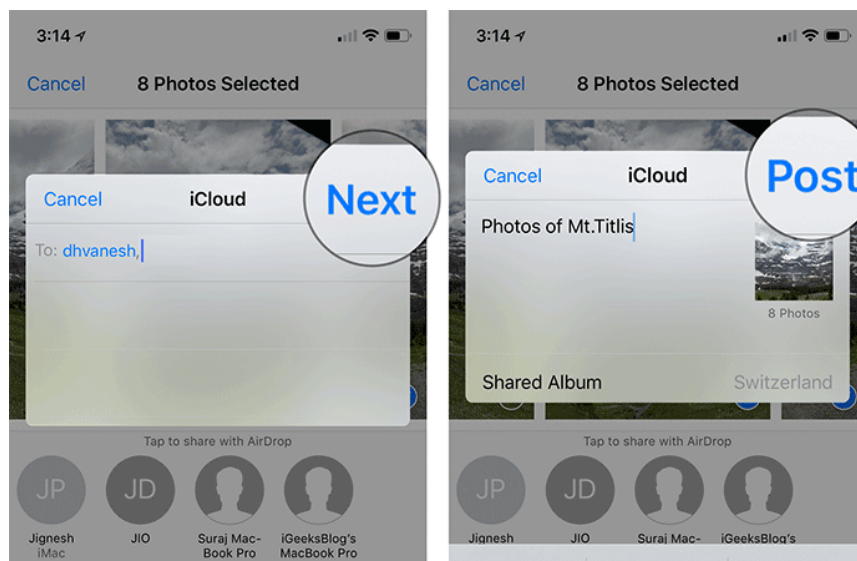

Step 4. Now, click "+" button, name the album and click **Next** .

If you don't want to share an album with anyone, click **Next**> **Post** .

On the other hand, enter the phone number or email of the person you want to share, click **Next** . Now, write a message then click **Post** .

So you've created and shared your iCloud photo album. Next, you can access it from the Album tab and manage it the way you want. Here, you can invite friends, allow / not allow them to post photos to albums and even delete them.
