

How to create animations from videos on Camtasia

Creating animations from videos on Camtasia is simple with the same steps as when you save videos.

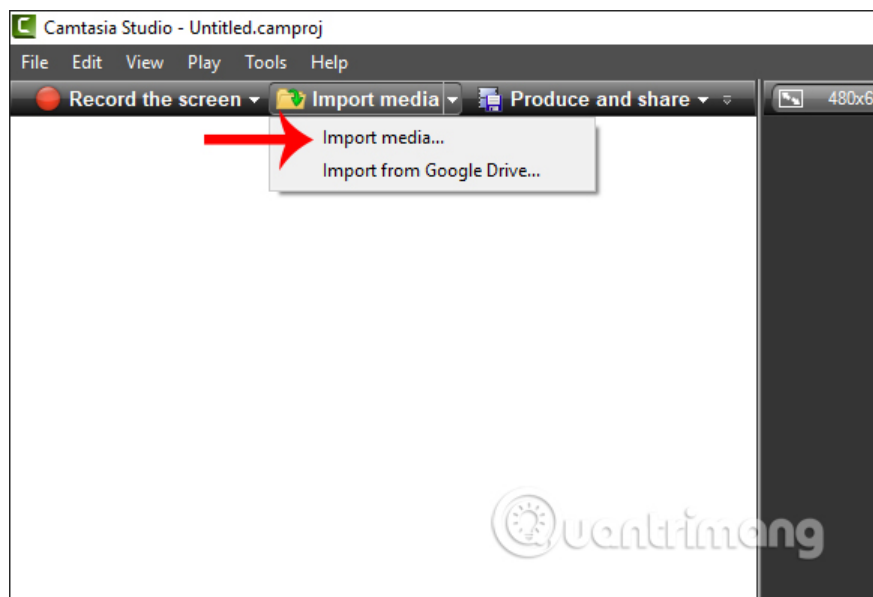

Creating animated images from YouTube videos or from existing videos is very simple, when we have many tools to support such as the famous Giphy tool, EZGIF online tool, or Photoshop animation. With Camtasia video editing software, users can also create animated videos from available videos, with various color options for animation or frame rate to change the animation after switching from video. The steps of converting from video to animation on Camtasia are very simple, as when we export edited video on software. Instead of choosing the format and quality for the video, users will choose the video format for video. The following article will guide you how to create animations from videos on Camtasia.

1. How to cut video by Camtasia Studio
2. How to pair 2 videos into 1 using Camtasia Studio
3. How to separate audio, split video by Camtasia Studio
4. How to insert text into videos on Camtasia

Instructions for creating animations on Camtasia

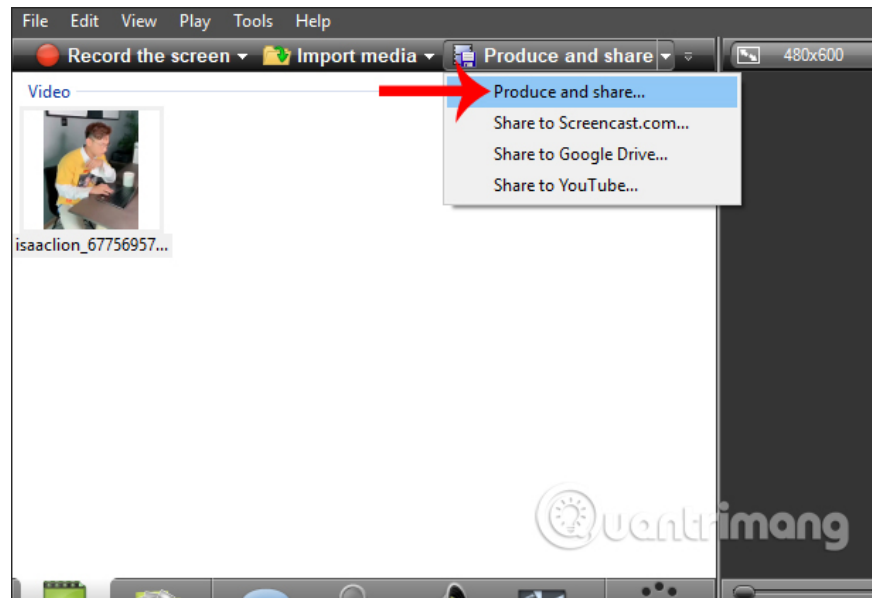

Step 1:

We click on **Import media** to download the video we want to convert into the animation format. Or users click Record the screen to record live video screen if desired.

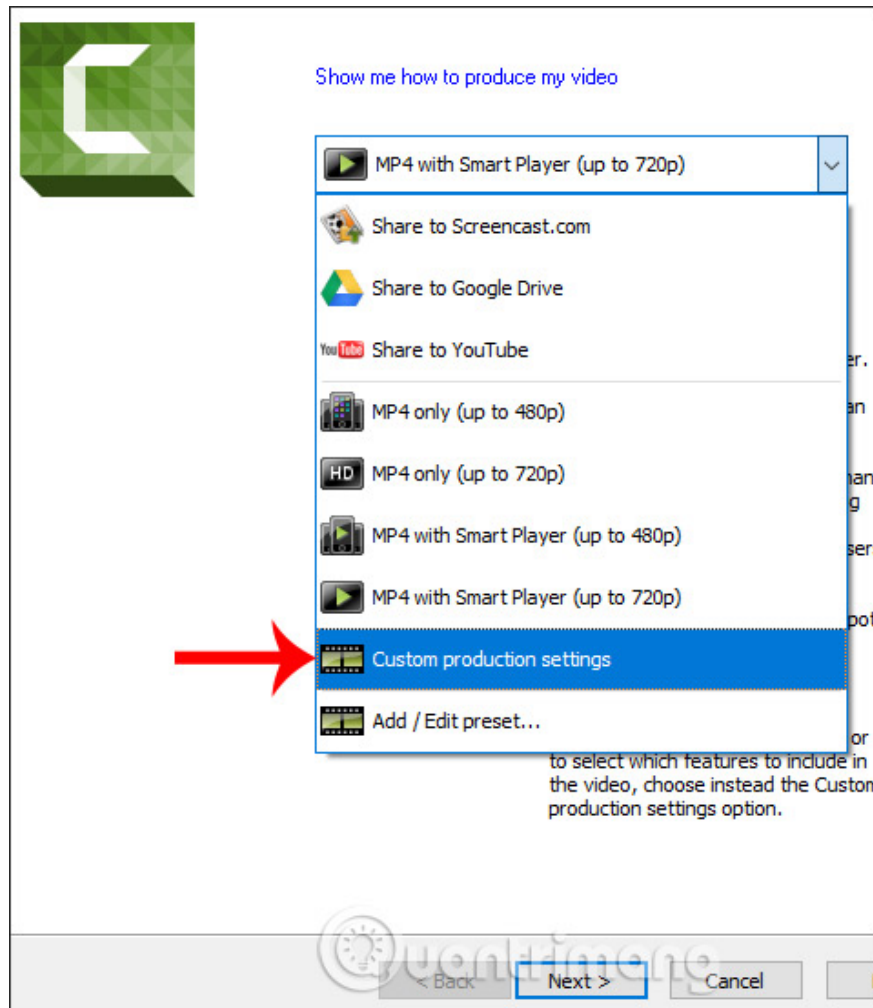

Step 2:

Drag the video to the Timeline bar below, then continue to **click on Produce and Share** .

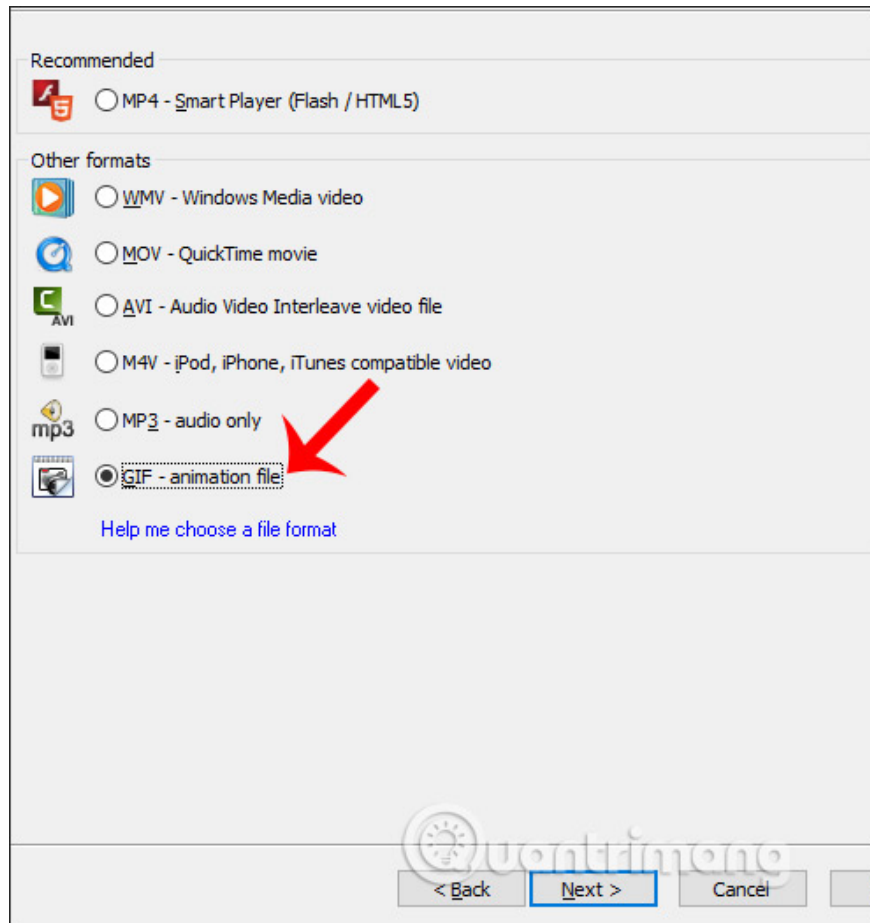

Step 3:

Display the interface for users to select the quality and type of video to extract, click the **Custom production settings** to customize the output content. Click Next to continue.

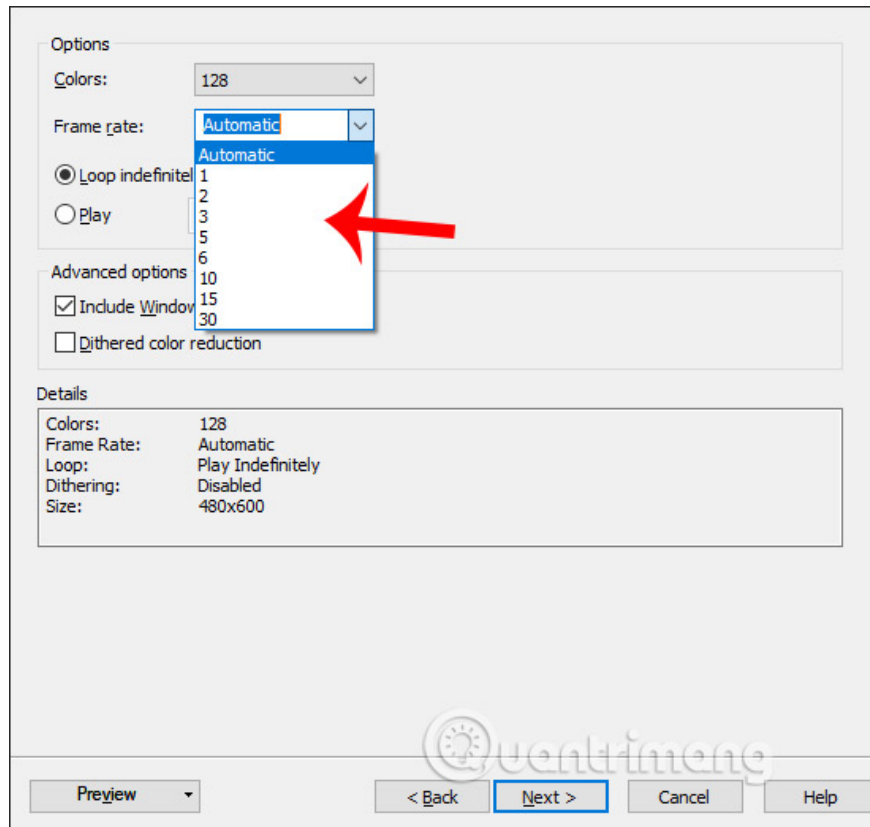

Step 4:

Switch to the new interface you click on **GIF - animation file** to choose **animation** format for video file. Click Next to continue.

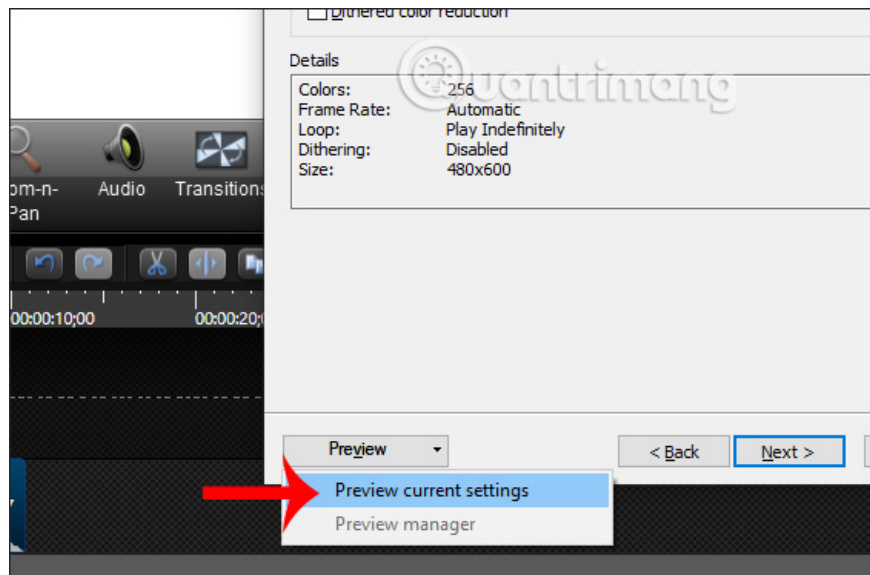

Step 5:

Switch to the re-adjust interface for output animation on Camtasia. If you don't know about color adjustments or other content, leave all the default settings. If you want to edit, **change the Colors and Frame rate section**. Then click Next to continue.

If you want to **preview the gif image** , click **Preview** and select **Preview current settings** . Then the gif image creation process takes place for users to preview.

Step 6:

Next we **resize the animation** if we want. The default size of the video will be the size of the animation. Click **Next** to move to the next step.

Video Size
Select the size of the video to produce.

Video size

Editing dimensions video size 480x600

Custom size:

Width: Maintain aspect ratio

Height:

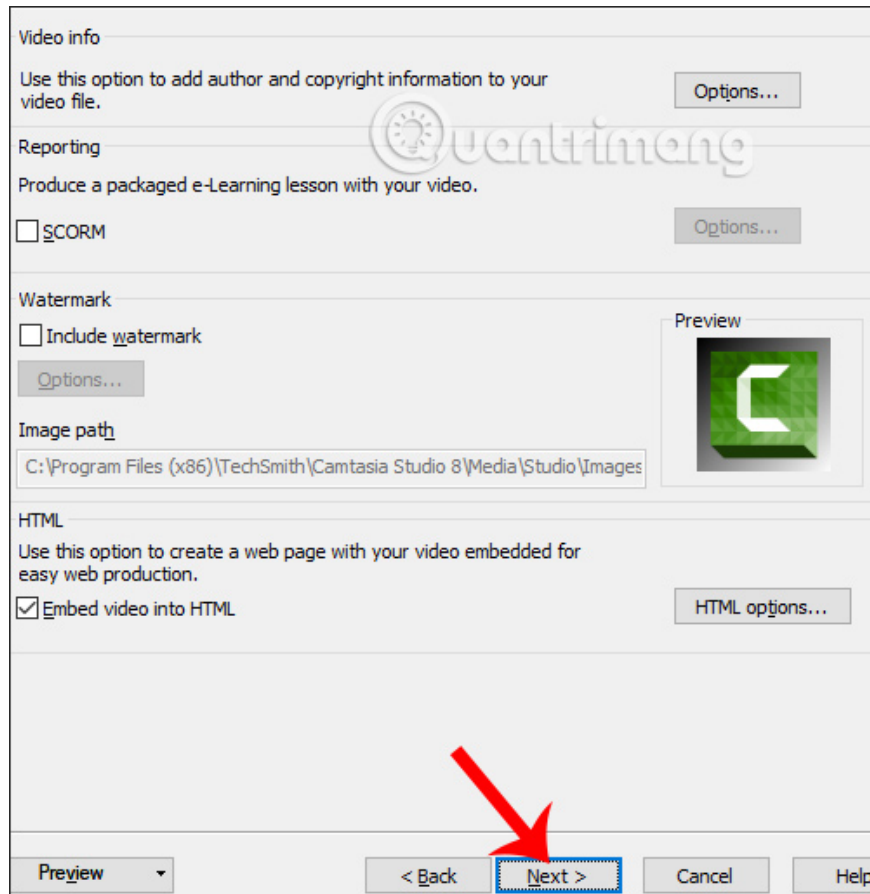

Warning: Changing the size of the video will degrade the image quality in the resulting video.

Preview ▾

< Back **Next >** Cancel

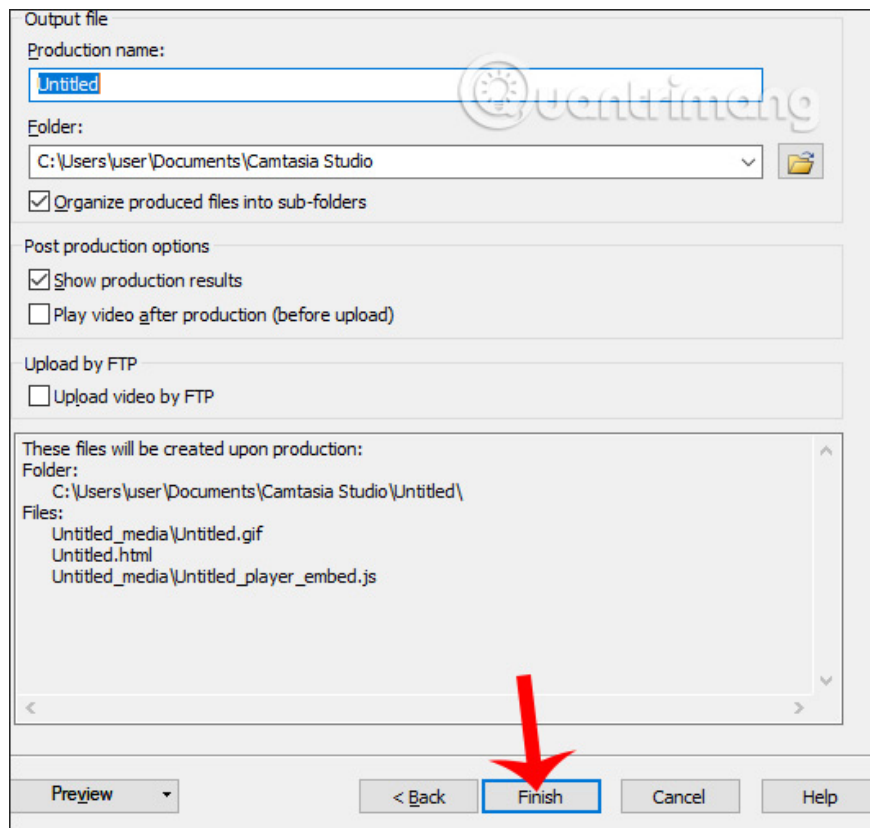

Next click Next to continue.

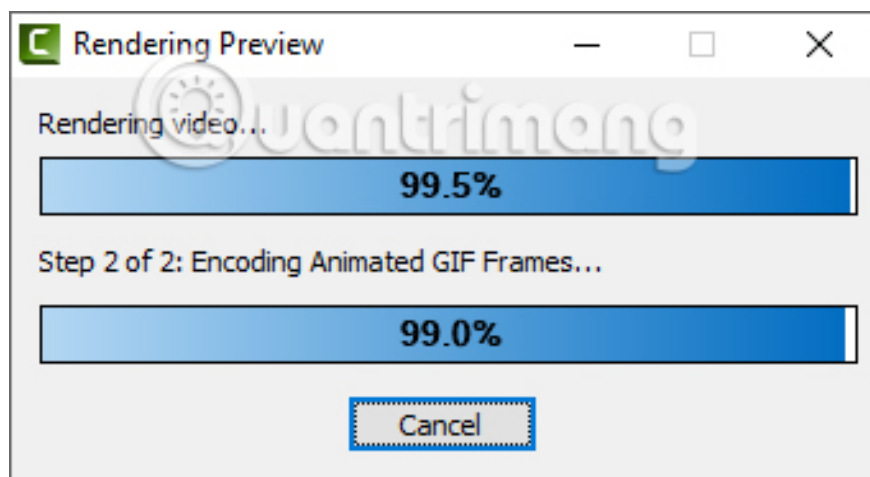

Step 7:

Finally users choose where to save the animation file, name the animation file and **click Finish** at the end to proceed to save the video as an animation.

The process of processing videos and moving to animations is immediately followed. When the process is complete you just need to access the folder where you saved the video that you selected earlier to get the animation.

Besides creating videos from screen-recording videos, adding some content to the video, Camtasia will also help you create animations from videos. The steps are simple and not complicated.

I wish you all success!
