

How to create background for photos on Xnapper application

The Xnapper application will create any image background, from phone screenshots to photos available in albums, helping you get more interesting images.

In addition, the Xnapper application also has a lot of settings to customize the surrounding background or the original image such as image corners. You can also change the watermark inserted in the image. The following article will guide you to create background for photos with Xnapper.

Instructions to create photo background on Xnapper application

Step 1:

You download the Xnapper application for your phone according to the link below and then proceed with the installation as usual.

Step 2:

At the interface of the application we **click on the line Select from Photos Manually** to select the photos in the album on the phone. Display albums, we click on your album to select images.

TipsMake

You will move the white circle to adjust items including:

1. Shadow: Add a shadow effect to the image.
2. Border radius: Customize the roundness in the four corners of the image inside the image.
3. Inset: Customize the size of the captured image.
4. Padding: Customize the size of the wallpaper.

Step 4:

In addition, we can also **click the Settings button to further adjust including Watermark , Auto balance inset and Auto redact email addresses** . You can change the Watermark line to something else if you want.
