

# How to create card photos in Photoshop

Photoshop software is famous for its professional features and maximum support for professional card photography. In this article, the Software Tips will guide you how to create card images in Photoshop.

Photoshop software is famous for its professional features and maximum support for professional card photography. In this article, the Software Tips will guide you how to create card images in Photoshop.

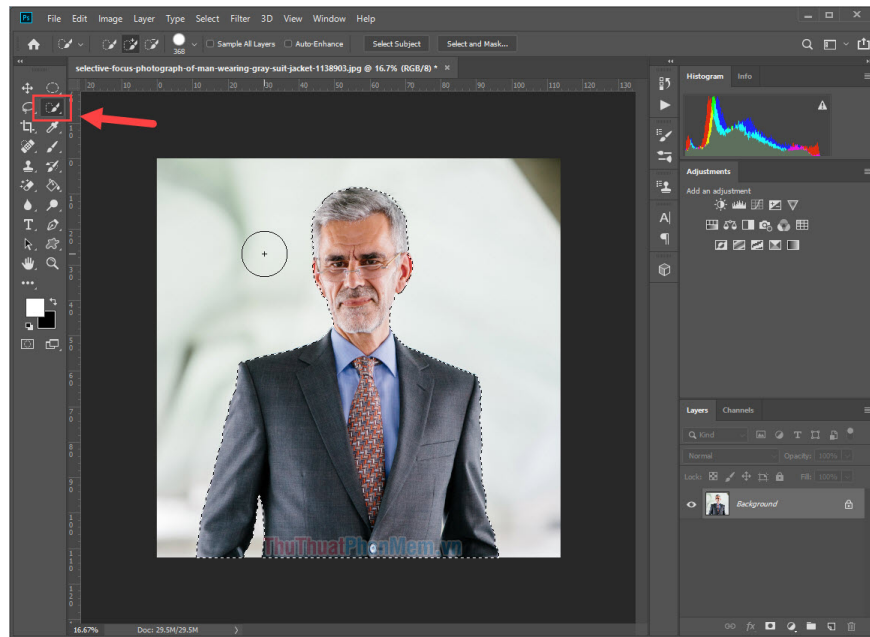

In this article, we will have 03 main parts as follows:

1. Create a green background for the card image (if the photo does not have a blue background)
2. Crop card photo according to the ratios (3x4 and 4x6)
3. Create photos to print (There are many photos in one sheet to save money when printing)

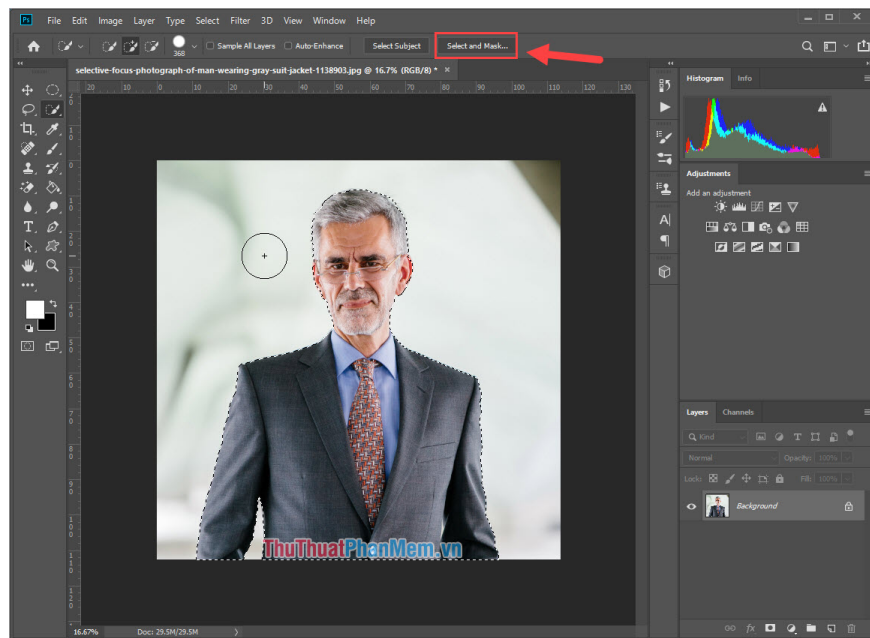

If your photo has a green background, then you go to Part 2, but if the photo is free, please follow the steps from the beginning.

## 1. Create a green background for card images

**Step 1:** You proceed to open the image you want to make a card image and select the **Quick Selection** tool . Then, you use the **Quick Selection** tool to select the subject to be separated from the background.

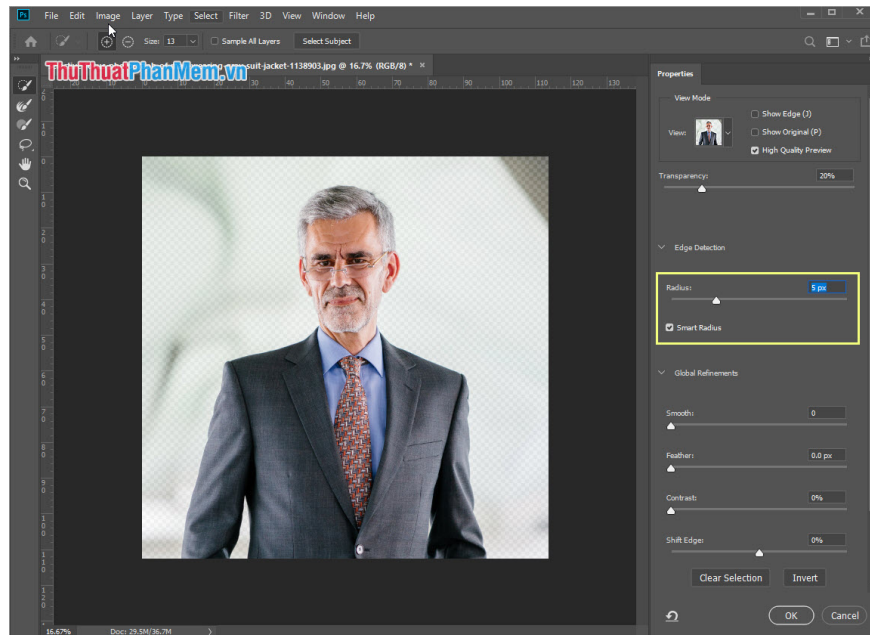

**Step 2:** Once you've selected the subject to be separated, you select **Select and Mask** . to edit for softer, smoother strokes.

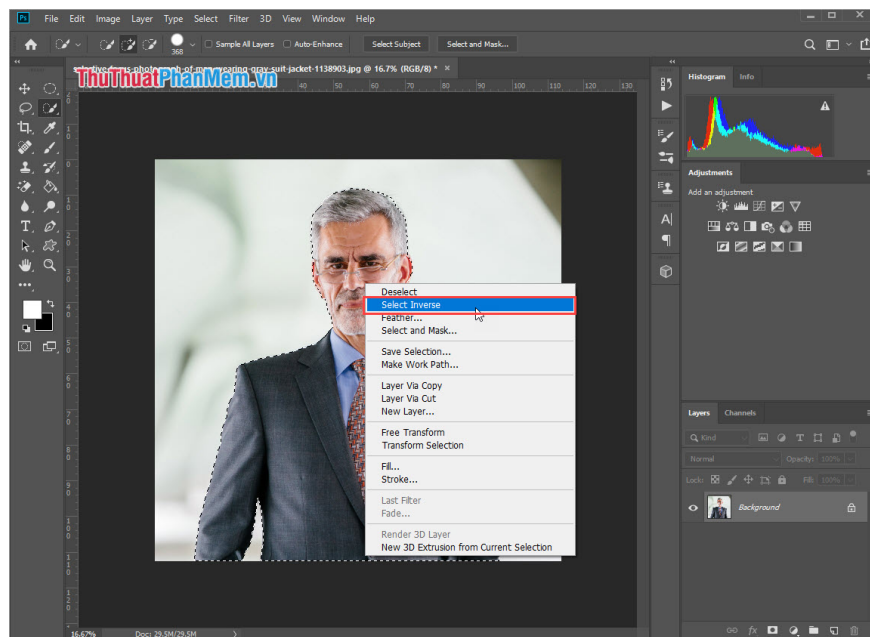

**Step 3:** After selecting **Select and Mask** . we will have the **Properties** window . You proceed to set the parameters as follows:

1. **Radius: 5 pixels (px)**
2. **Select Smart Radius**

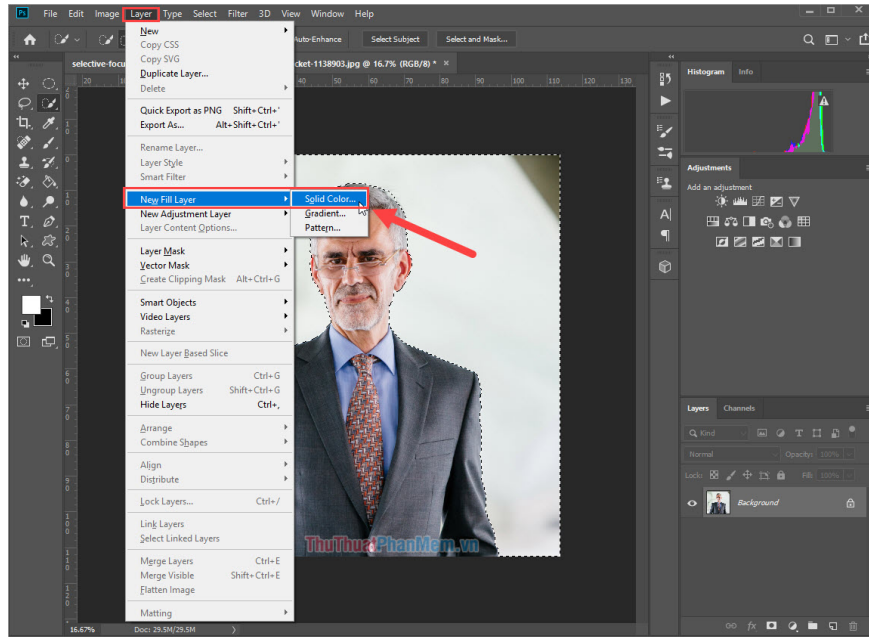

Finally, click **OK** to save.

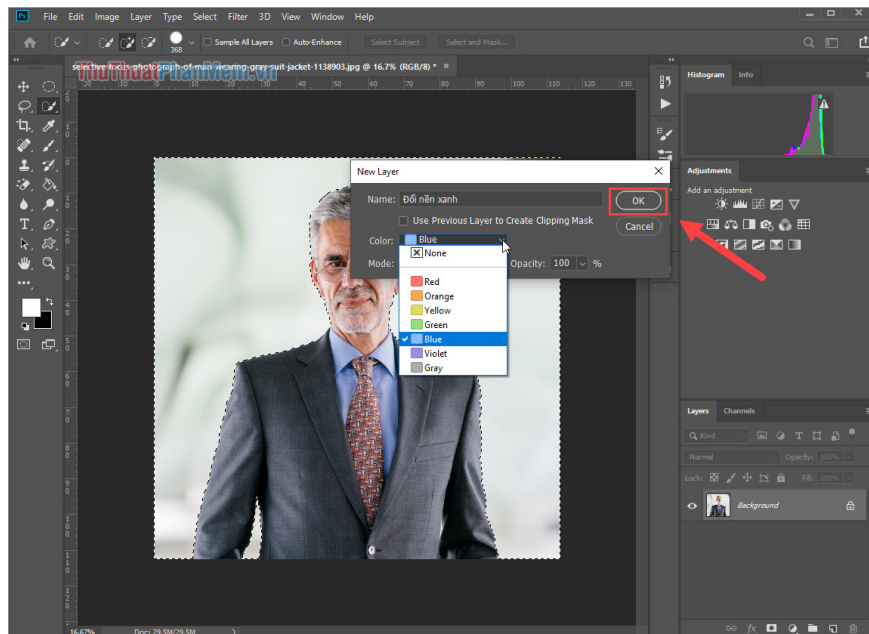

**Step 4:** You Right-click on the subject and choose **Select Inverse** to invert the selection.

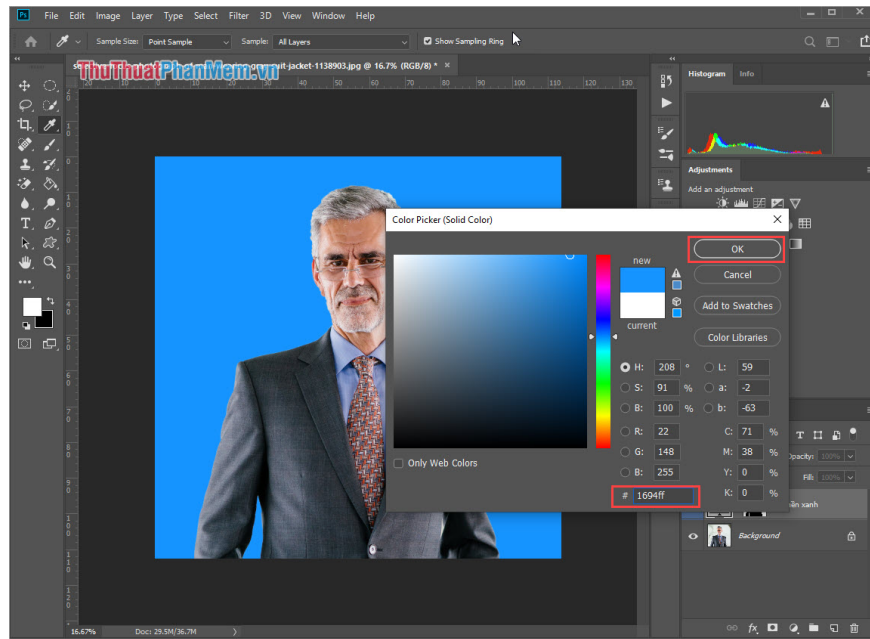

**Step 5:** Next, select **Layer -> New Fill Layer -> Solid Color** .

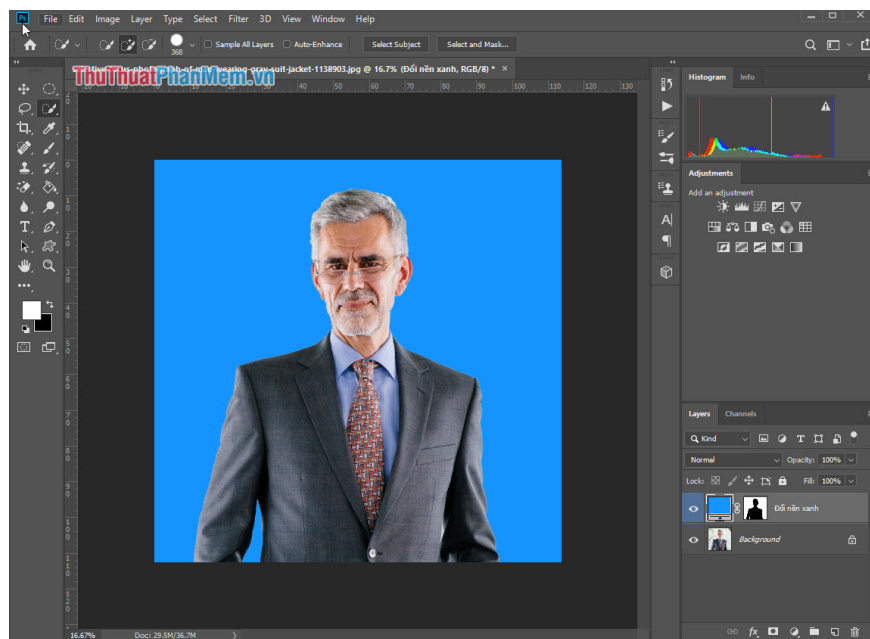

**Step 6:** Then, you proceed to name it and choose **Color Blue** to distinguish it. Finally, click **OK** to move to the color selection step.

**Step 7:** The Color Picker window will appear for you to choose the color. Now you need to choose blue to replace the background image. Most people today use blue with the code **#1694ff** to tag images. You can enter the code to select the color faster.

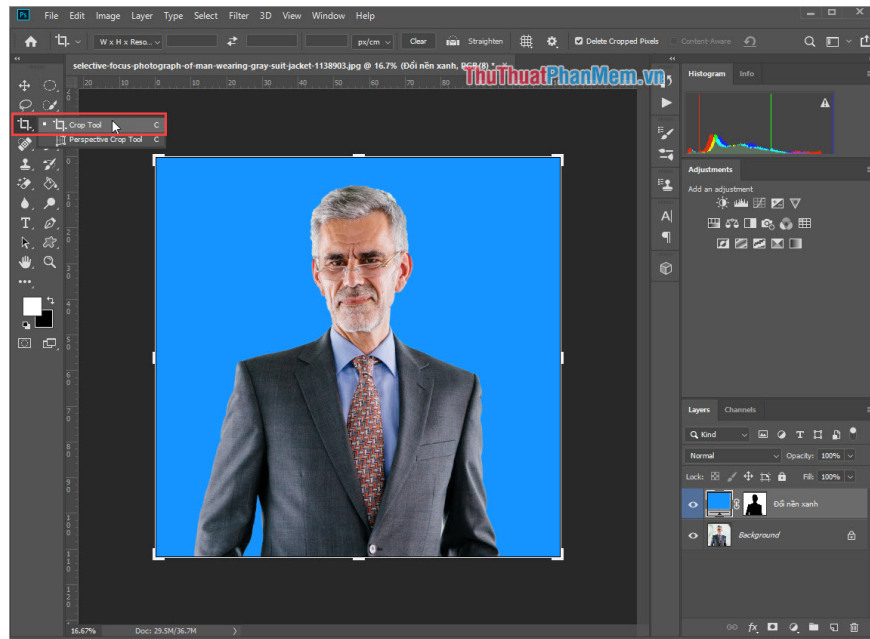

Finally you click **OK** is finished, so we have replaced the green background image successfully!

## 2. Cut the card photo to the proportions

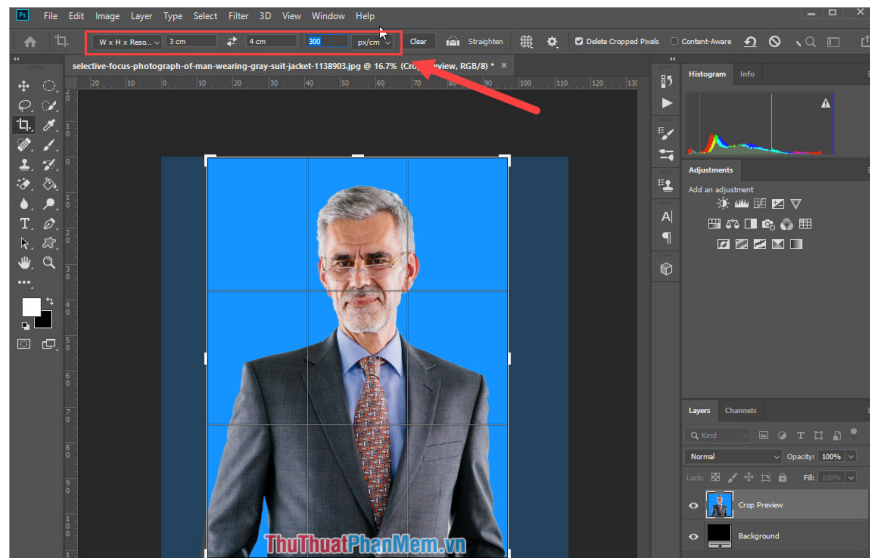

**Step 1:** Select the **Crop Tool** to crop the image.

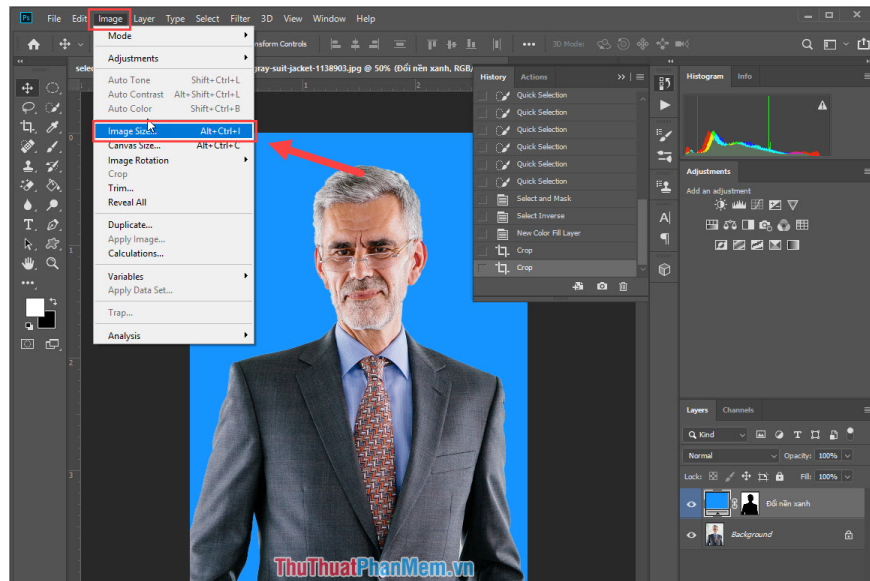

**Step 2:** After that, you turn to set the following parameters:

1. **Mode:** W x H Resolution
2. **Width:** 3 cm (3x4 photo) or 4 cm (4x6 photo)
3. **Height:** 4 cm (3x4 photo) or 6 cm (4x6 photo)
4. **Resolution:** 300 px / cm

Next, you use the mouse to align the image area to create a card in the center of the **Crop** frame to make them beautiful. When the calibration is complete, click **OK** to crop the image.

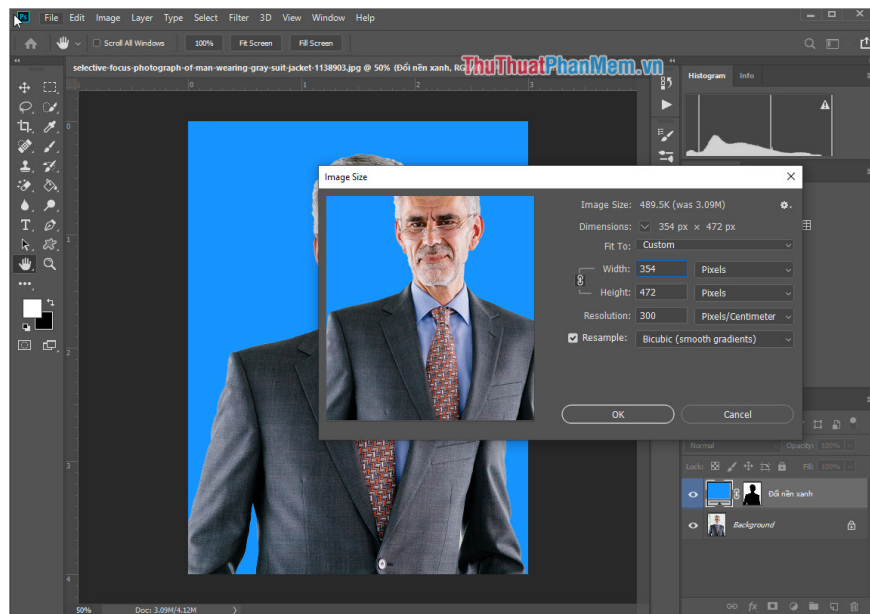

**Step 3:** Next, you select **Image -> Image Size** to Resize the image to scale.

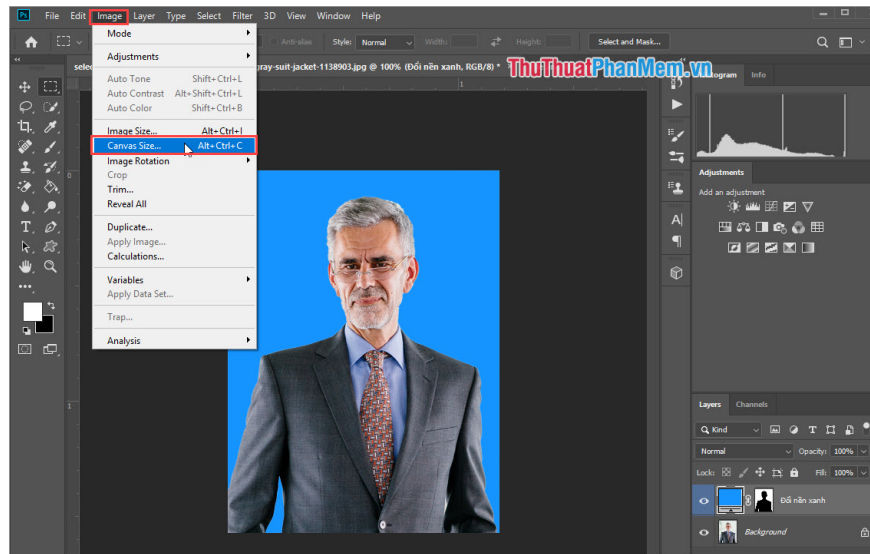

**Step 4:** You proceed to set the following parameters:

1. Photo 3x4cm: 354 x 472 Pixels, Resolution 300 px / cm
2. Photo 4x6cm: 472 x 709 Pixel, Resolution 300 px / cm

Then you click **OK** to save.

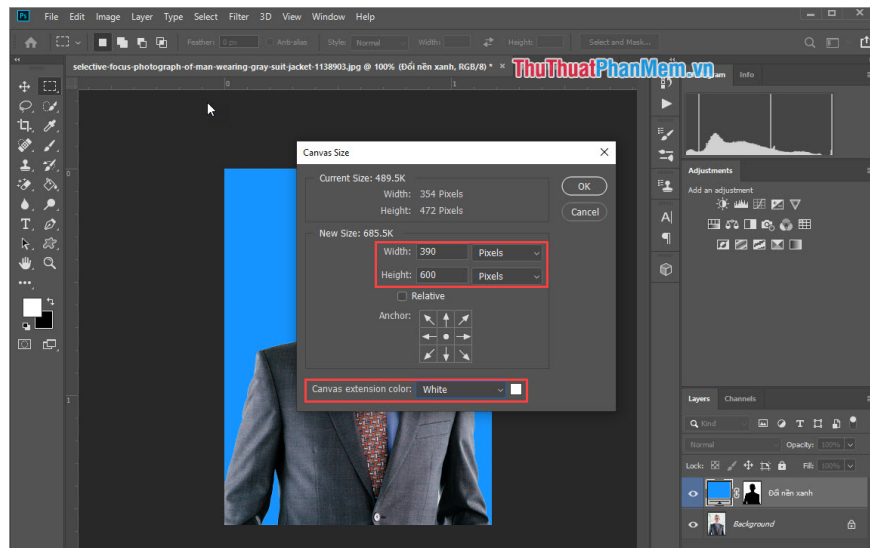

**Step 5:** Next, select **Image -> Canvas Size** .

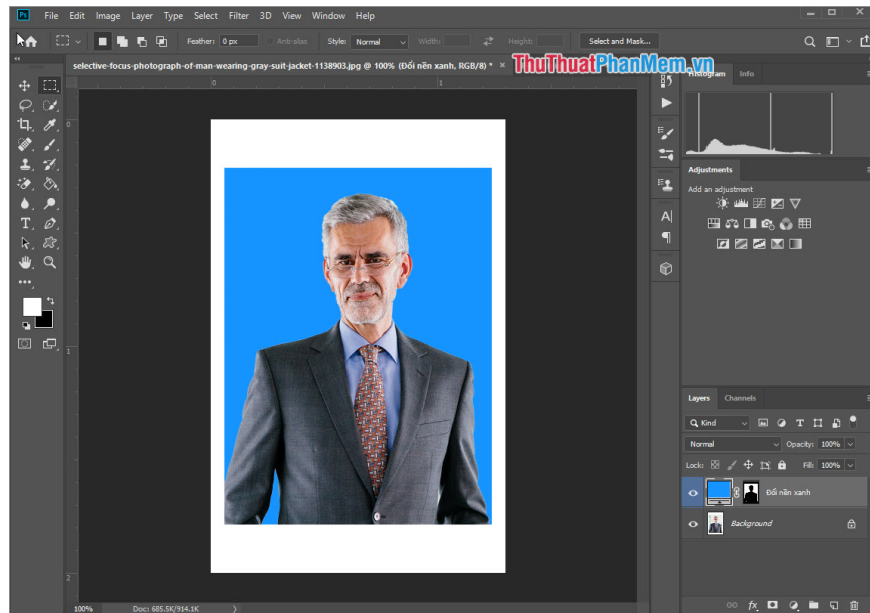

**Step 6:** Continue setting the parameters as follows:

1. Photo 3x4cm: 390 x 600 Pixels
2. Photo 4x6cm: 570 x 870 Pixel
3. Color White

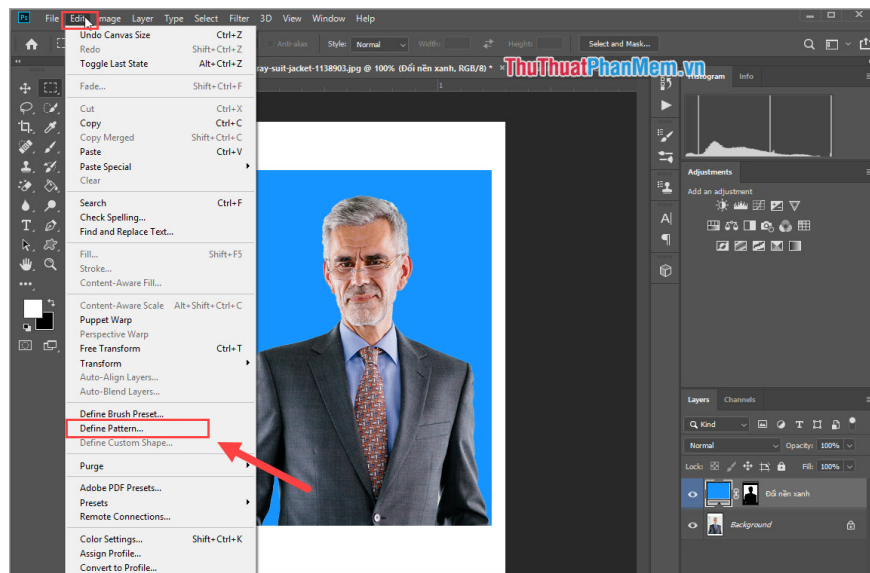

Finally, click **OK** to finish! So you have finished the photo cropping and resizing according to the ratio of 3x4 and 4x6 images.

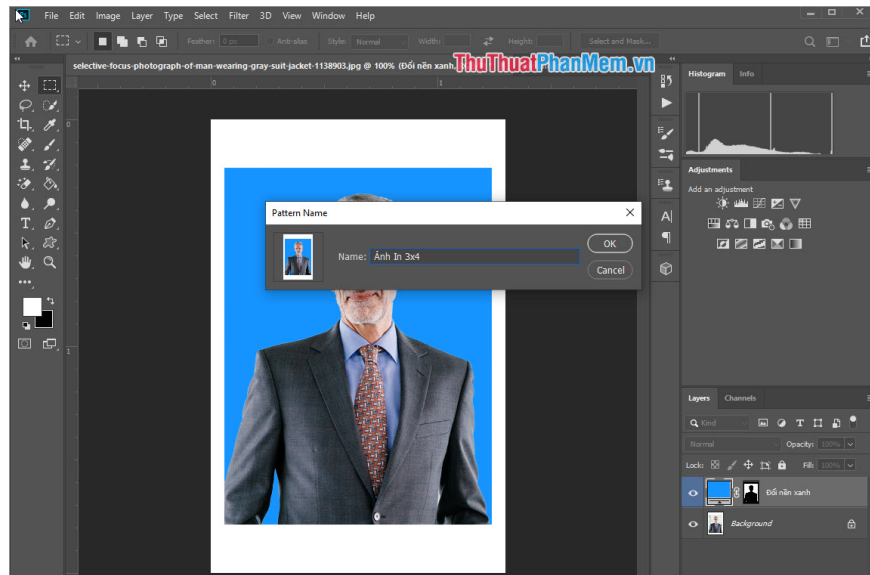

### 3. Create an image to print

To save money on printing, we will create a card photo into a 10 x 15 cm photo frame to print once.

**Step 1:** Select **Edit -> Define Pattern** to create a Pattern image.

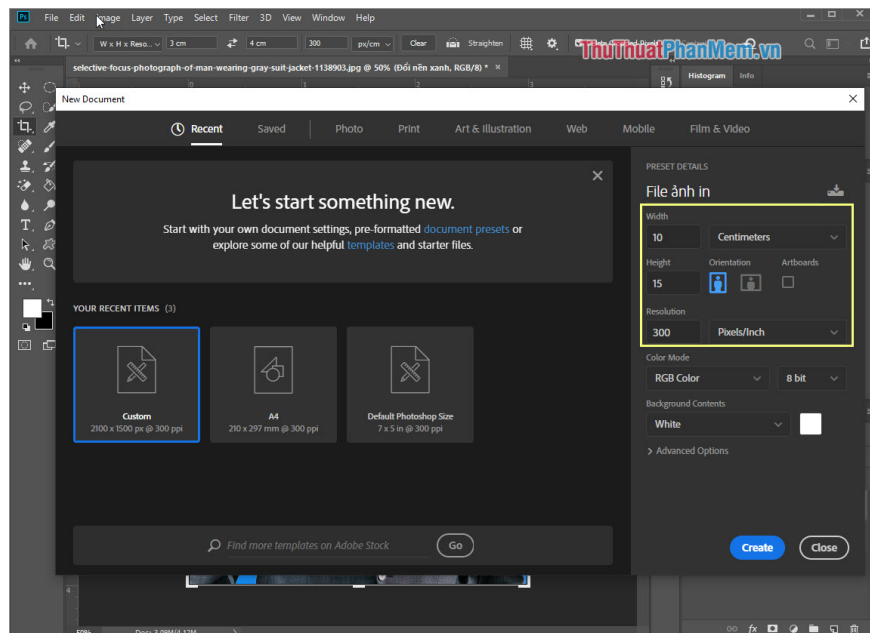

**Step 2:** You name it arbitrary so that it is easy to remember and click **OK**.

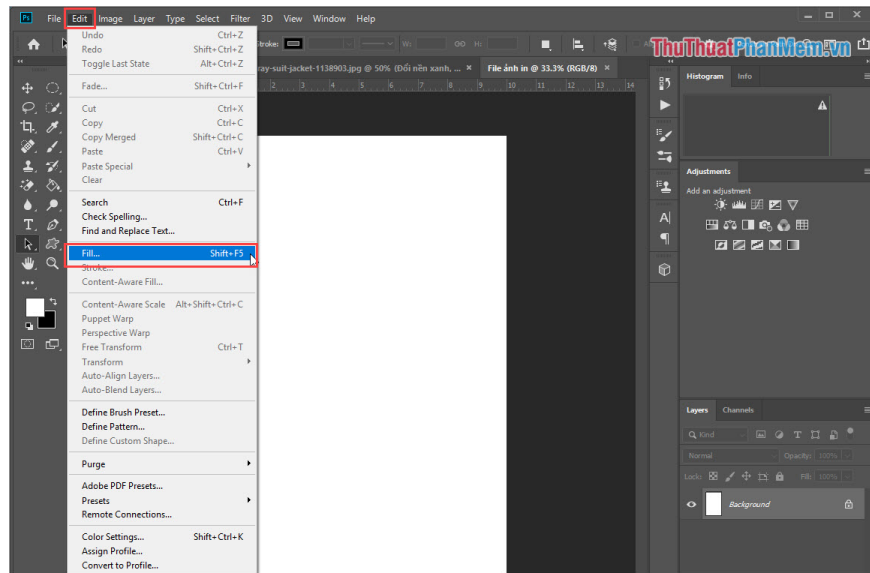

**Step 3:** Choose **File -> New (Ctrl + N)** to create a new working file and set the following parameters:

1. **Width:** 10 centimeters
2. **Height:** 10 centimeters
3. **Resolution:** 300 centimeters

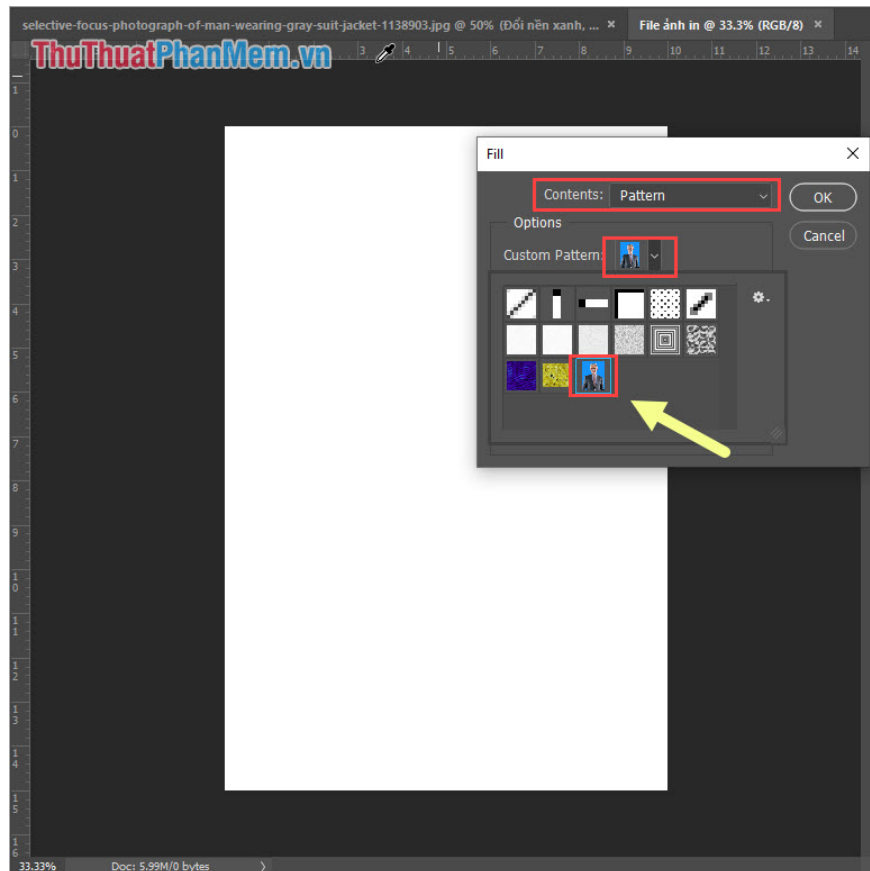

Then, click **Create** to create.

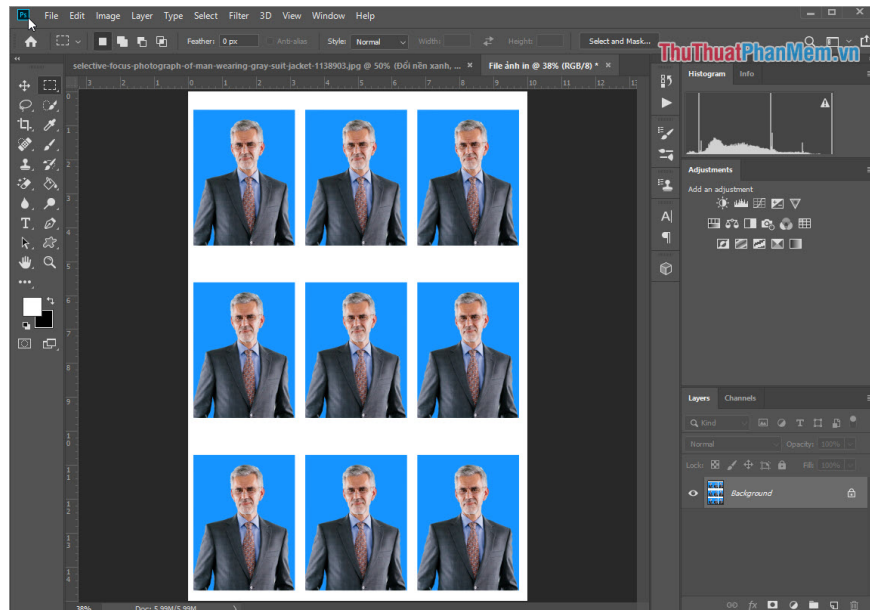

**Step 4:** Select **Edit> Fill** to paste the newly created **Pattern** .

**Step 5:** Select the newly created image **Pattern** above the article and click **OK** .

And this is our result after framing the image for printing.

If you want to print always, just select **File -> Print . (Ctrl + P)** is done.
