

# How to create fake location, fake GPS on iPhone

To create a fake location on the iPhone, we can install Relocate tweaks.

The fake GPS on the phone, creating fake location on the phone helps users hide the current location on the phone and instead is a fake position that you choose yourself. With Android device you can fake the address with Fake GPS Location application - Hola. As for iOS jailbroken devices, users can use Relocate tweak for iOS 11 and above devices. Refine to bring location map to the world so that we can choose any fake location for the phone. Then the real position will be hidden and replaced by the fake location of your choice. With this fake GPS, you can comfortably checkin Facebook at any location in the world. The following article will guide you how to use Relocate tweak on iPhone / iPad.

1. How to create fake location on Zalo
2. How to delete Significant Locations (important locations) on iPhone, iPad
3. Instructions to turn on positioning on iPhone
4. Instructions on how to mark locations with Marker on iPhone

## Instructions fake GPS on iPhone / iPad

### Step 1:

Users download the Relocate tweak at the Nepeta source in Cydia, or download the link below.

```
