

# How to create images on Midjourney using AI

Designed using AI (artificial intelligence), Midjourney can automatically generate images based on short descriptions provided by users. TipsMake will explain how to create images on Midjourney using AI in the article below.

**AI-** based bots can now create photos exactly as users want them, almost instantly, a prime example being the recently trending AI-powered photo generator on Midjourney.

## Instructions on how to create images in Midjourney

### Table of Contents:

**How to create images in Midjourney using AI .**

### *1. What is midjourney?*

AI-based image generators like DALL-E 2 can create entirely new images based on simple text descriptions, or at a more basic level, Craiyon (also known as DALL-E mini), a free web tool, can generate slightly creepy but interesting images.

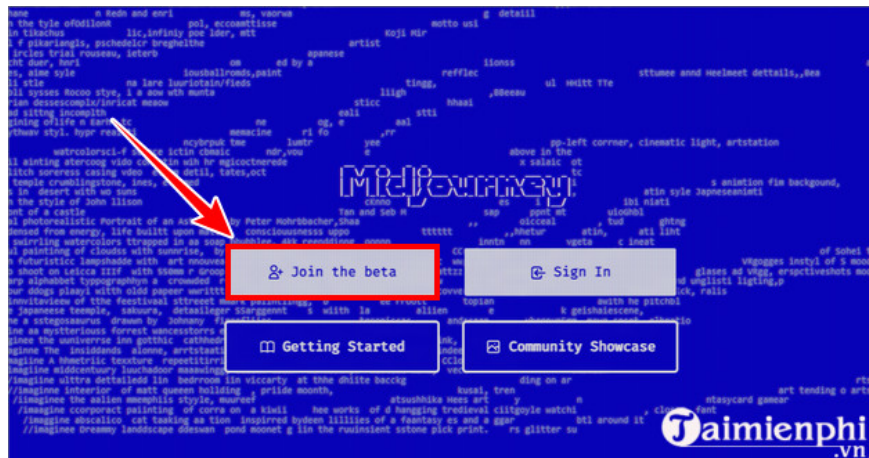

Midjourney sits "between" DALL-E 2 and Craiyon, using AI and machine learning to generate images based on text descriptions. The images created by Midjourney tend to be more aesthetic and artistic.

## 2. How to create images on Midjourney using AI

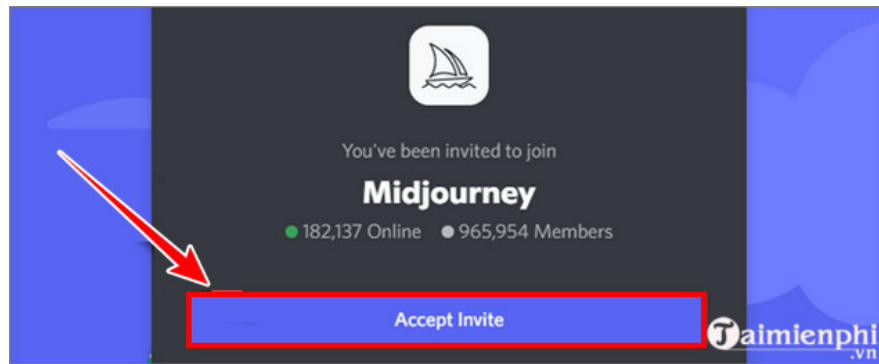

The Midjourney beta version is now available for users to test. All you need to create images on Midjourney using AI is a Discord account, which you use to enter descriptive commands for the Midjourney bot.

To get started, if you don't already have a Discord account, you can sign up for a free account on the Discord homepage or through the app for Windows, Mac, Linux, Android, and iPhone.

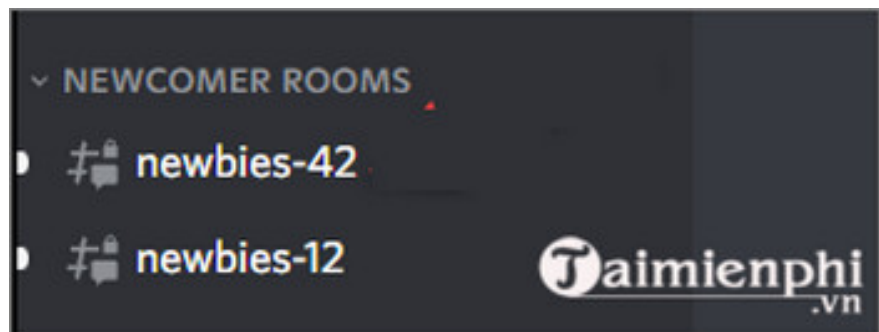

Use your account to log in and set up Discord (on the web or app for Windows, Mac, Linux, Android, and iPhone), then go to the Midjourney homepage (<https://www.midjourney.com/home/>) and select **Join in Beta**.

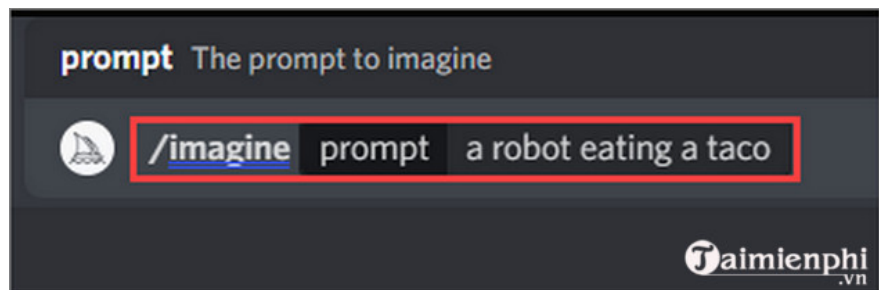

You will then be redirected to Discord, where you click on **Accept Invite**.

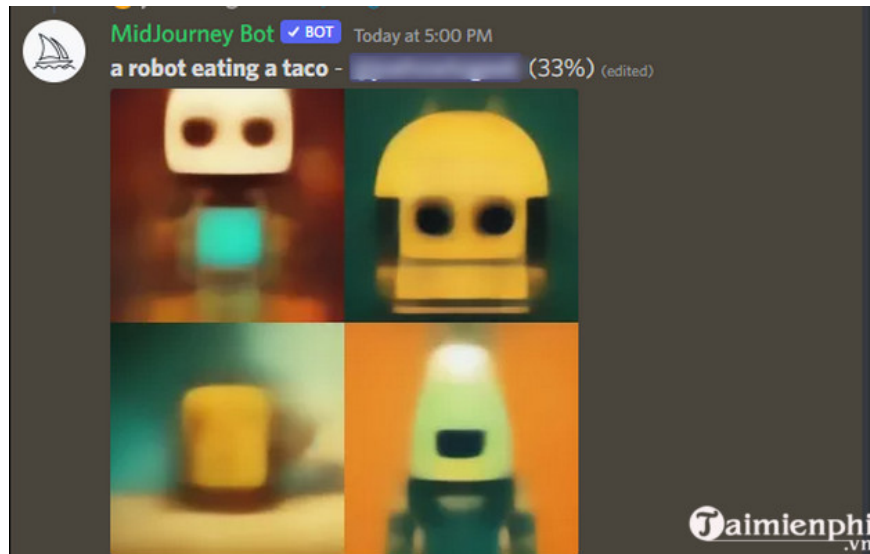

Next, access one of the **Newcomer Rooms** channels on the sidebar.

Type the command **/imagine** into the text box, then type your description/prompt, and press Enter.

The screen will display the progress of the images being created, which you can monitor.

Once the process is complete, you will receive a new notification on the screen with some additional options.

**U = Upscale** : Creates a larger version of the image.

**V = Variation**: Creates a new image based on the image you have selected.

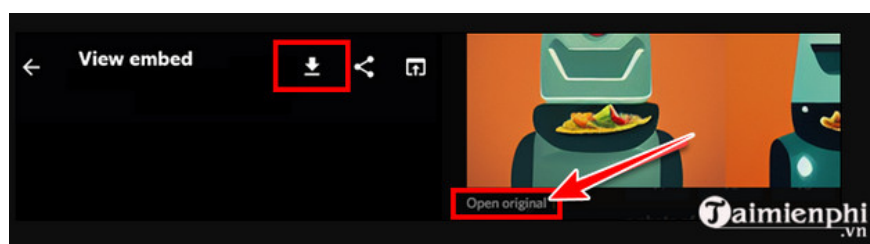

**Refresh**: Creates 4 new images from the same description/prompt.

The results will be sent in a new message along with some new options that you can use to create more versions.

To save an image, simply select the image and tap the download icon on your mobile device, or click "**Open Original**" on your computer to view the image in full size before saving.

Above is a detailed guide on how to create images in Midjourney using AI. The steps are quite simple; just enter the command **/imagine** and a short description. Additionally, if you encounter any difficulties or problems while doing this, please leave your comments in the section below the article.
