

How to create iPhone application bulletin board

Tweaking ShortLook will create a bulletin board for the iPhone application, showing the application icon with notifications.

Applications on iPhone when new notifications are displayed on the lock screen, with horizontal frames showing the contents of the notification. Tweaking ShortLook for iOS 11 jailbreak devices again creates a more unique notification style, when displaying the application icon interface with new notifications first.

Accordingly, when there is a notification, a black background interface appears with the notice of the application. When clicking on the screen, the default notification interface will be displayed again.

Instructions for creating new iPhone notifications

Step 1:

Currently tweaking ShortLook is sold for \$ 3.99. If you want the previous experience can access the repo <https://repo.xarold.com/pack/shortlook> .

Step 2:

After installation is complete, users access Settings and then select ShortLook to proceed to change settings. In this new interface you will have many main customizations to use.

1. Enabled: Toggle tweaking.
2. Show Contact Photos: Displays contact photos for notifications.
3. Translucent background: Turn on or off black blur background.
4. Timeout bar: Select the time interval to display the ShortLook message.
5. Sleep Resume if Acknowledged: Go back to Sleep mode unless the message is confirmed by ShortLook.
6. Use Anemone Icons: Use the icon in Anemone if you use Anemone themes.

Dynastic Development

ShortLook v1.0.4

Enabled

APPEARANCE

Show Contact Photos

Translucent Background

Display notifications with a dark blurred translucent background rather than the default solid black background.

Show Notification Message

Show notifications' content underneath their title and subtitle. This will not show if you have 'Show Previews' turned off for the application sending the notification.

TIMEOUT

Specify how long to wait before automatically dismissing a notification.

MOTION

Dismiss on 'Raise to Wake'

Resume Sleep unless Acknowledged

Rather than showing the Lock Screen, return to sleep after displaying a notification if the device is not raised or tapped.

APPLE WATCH

Notifications while Connected

By default, iOS will not wake for a notification if it appears for the paired Apple Watch. By enabling this, your device will still wake to show ShortLook.

THEMING

Use Anemone Icons

If you have Anemone installed, you can toggle whether or not to use themed icons provided by iOS or from Anemone. Because some themes have low quality icons, if you find that icons in ShortLook are pixelated or blurry, try turning this off.

Send Test Notification

Your device will return to the Lock Screen and you will receive a test notification from a random application.

After activating the options you want to use, the bulletin board will be applied right on the device. We will visualize how the message displays through the image below.
