

# How to create iPhone ringtones with iTunes

Creating iPhone ringtones with iTunes is the most popular way to create ringtones that iPhone users often use. If you do not know how to do it, please read the instructions for creating iPhone ringtones below.

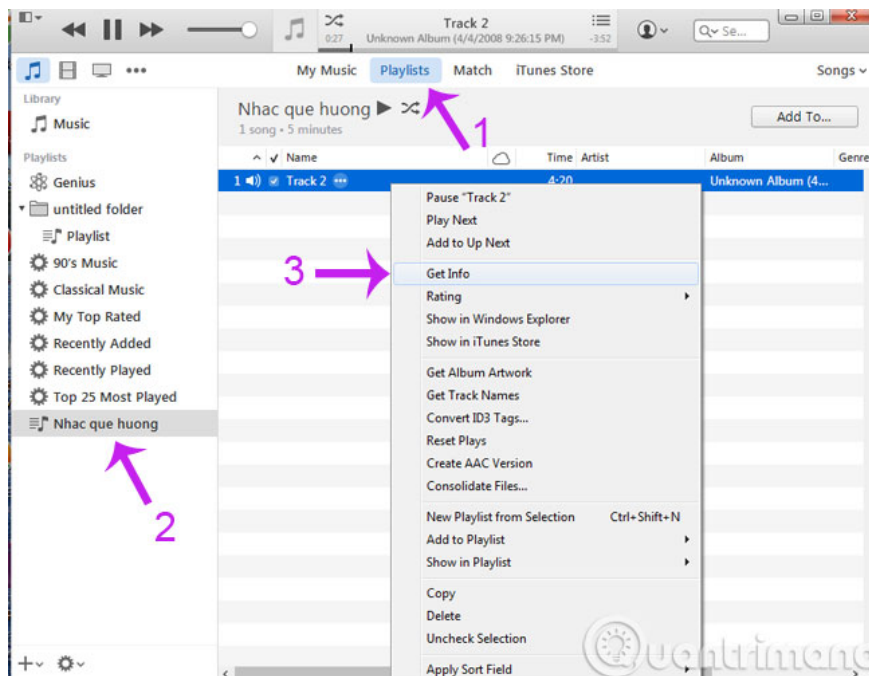

You were too bored with the iPhone's default ringtone and would love to own the melody of the hottest songs today. Or simply just want to create a personal ringtone, suitable for your personal taste. So how to create ringtones on iPhone?

Perhaps many people have the same concerns as you. Therefore, we will help you to design your personal favorite ringtone with iTunes extremely quickly. Please refer to the article below.

## Steps to create iPhone ringtones

### Step 1 : First start iTunes

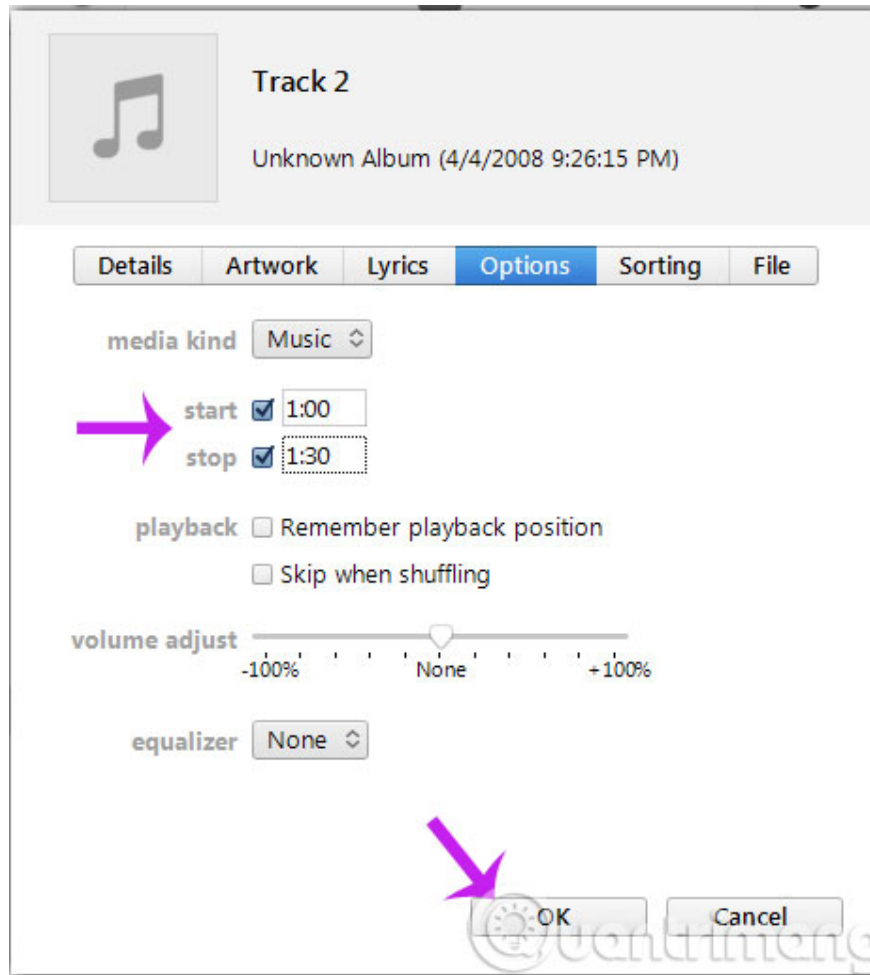

In iTunes, find the song you want to cut as a ringtone, then right-click the song and choose **Get Info** .

### Step 2 : Select the Options tab in the window that appears

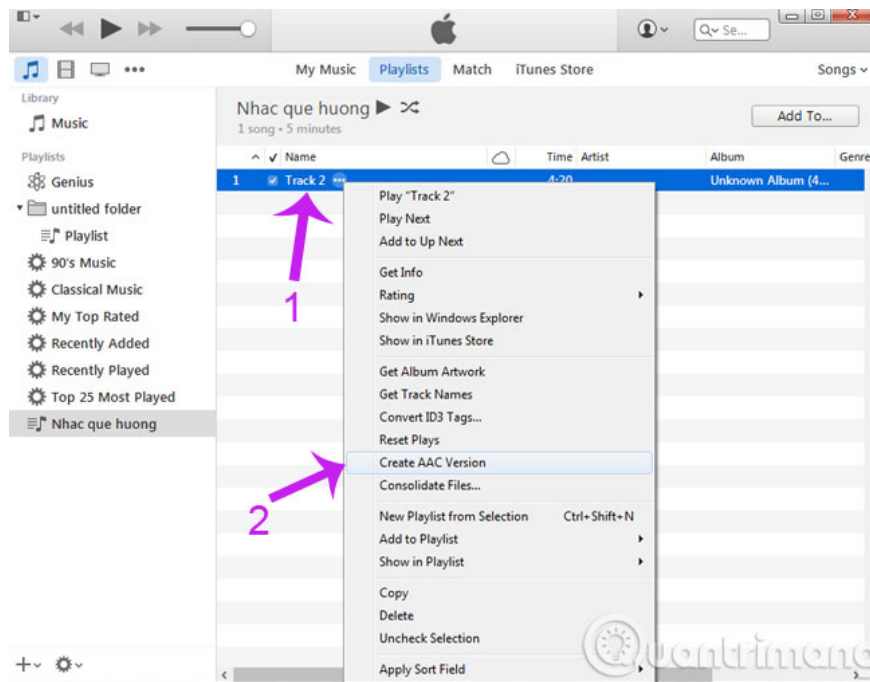

Here select the start and end time for **Start** and **Stop** to cut the ringback tone in that song, it's best to listen to the song first to know how many seconds to cut. Then, press the **OK** button. **Note** : The total time is not more than

40 seconds .

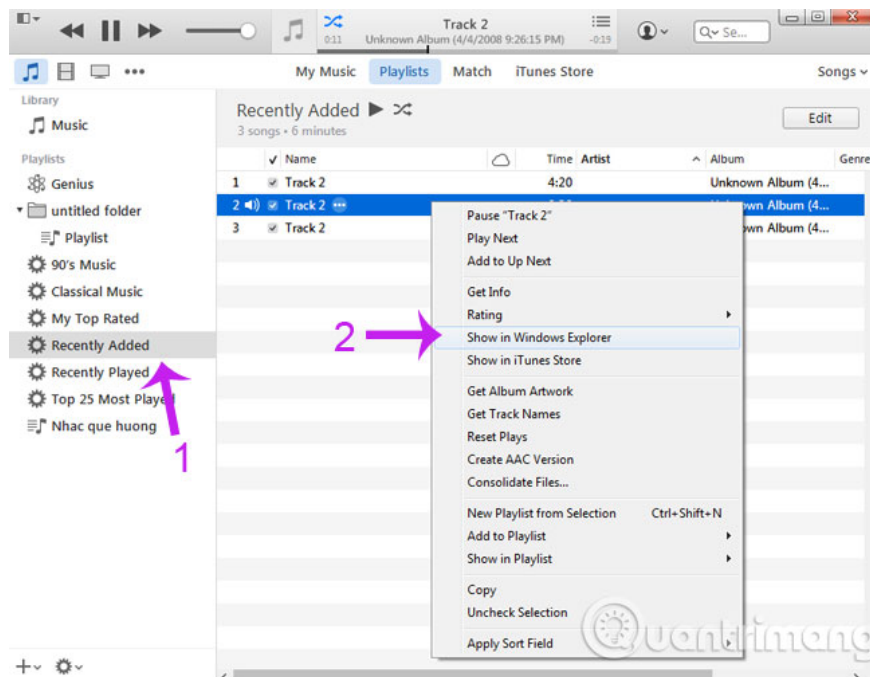

### Step 3 : Create an AAC version for the song

After step 2, **iTunes** will switch to the song list screen, right-click on the medium file and select **Create AAC Version** .

#### Step 4 : Display music files in Windows Explorer

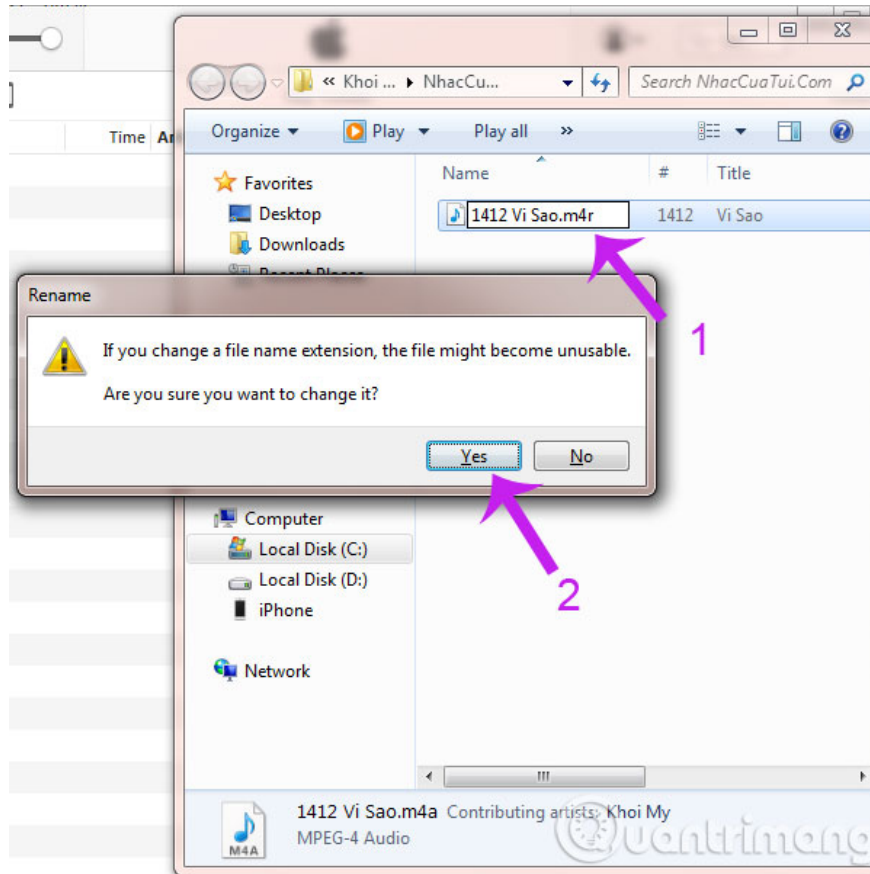

After step 3, there will be an additional piece of music just below the original song you just selected, corresponding to the time you cut. Continue to right-click the file just cut, select **Show in Windows Explorer** to open the folder containing the file.

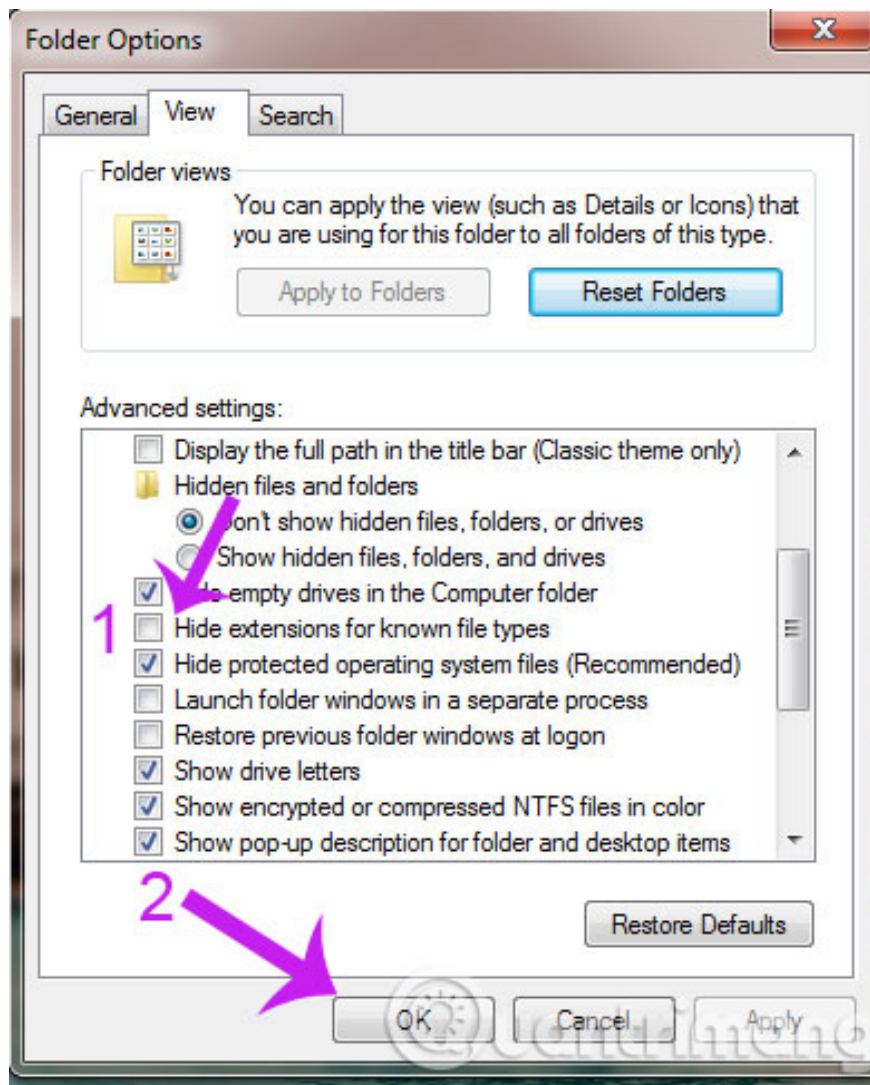

#### Step 5 : Change tail m4a to m4r

At this point, the folder containing the created file will open. However, this file is in **m4a** format, while the format for making iPhone ringtones is **m4r**. Therefore, it is necessary to change the **m4a** tail to **m4r**

accordingly.

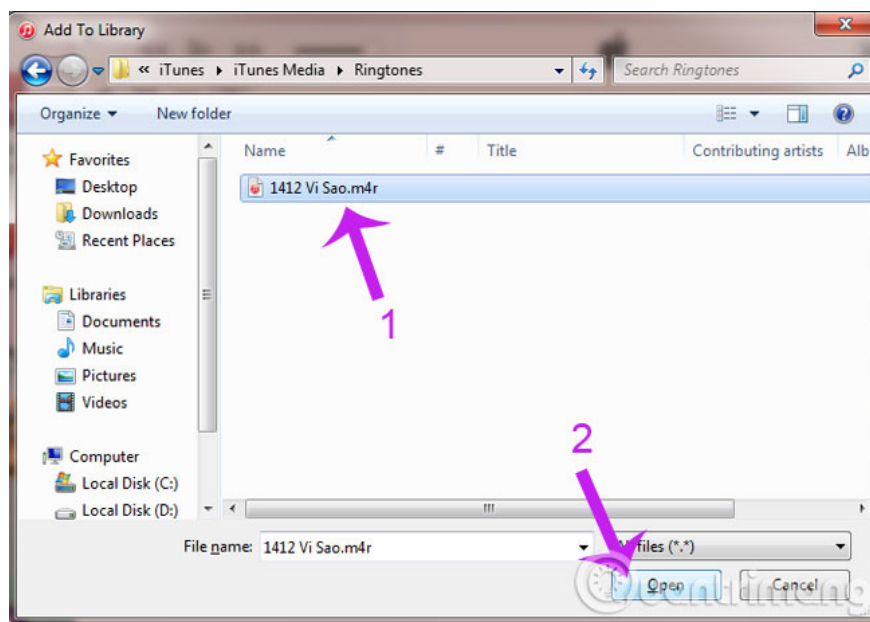

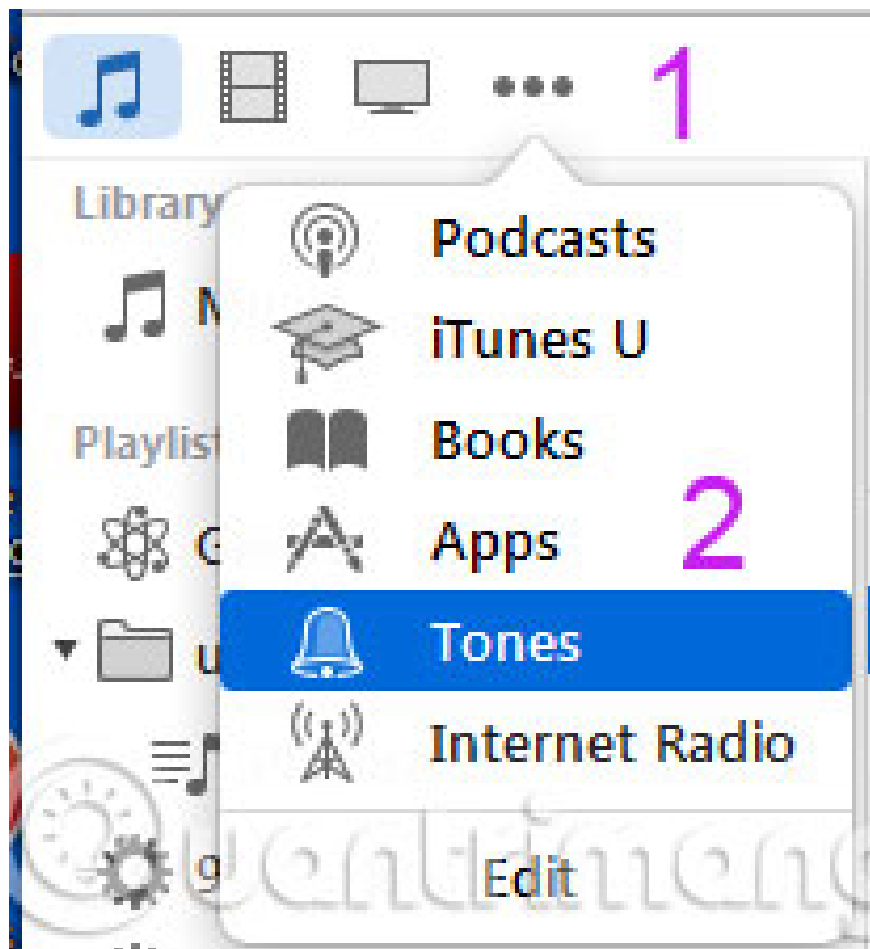

Note: If you do not see the file extension, go to Control Panel >> Folder Options. In the Folder Options window, select the View tab and then uncheck the Hide extensions box for known file types.

### Step 6 : Add files to the Tones library

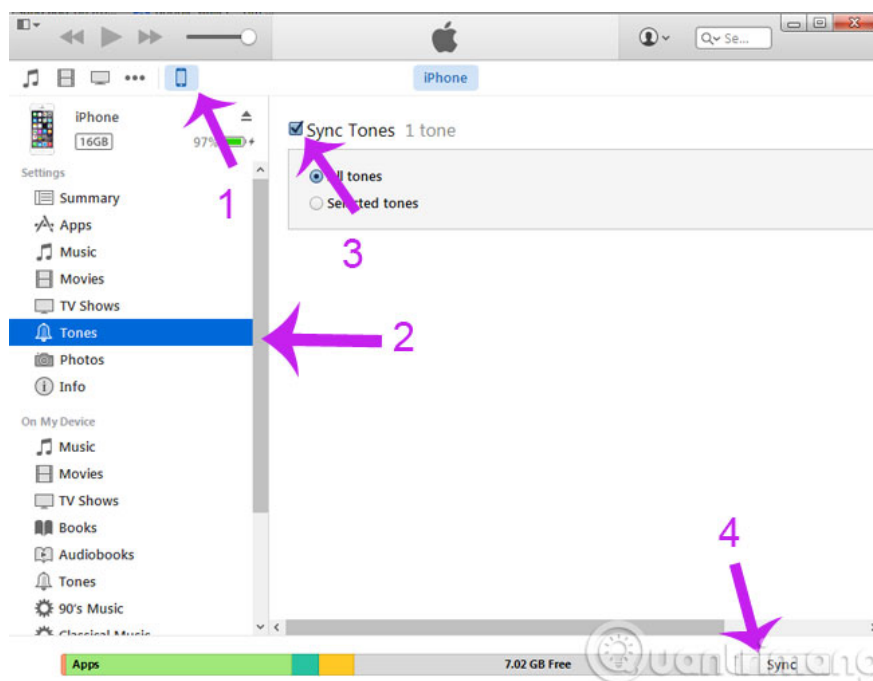

Now just drag the file into iTunes to add it to the Tones library. At the Tones section interface, press Ctrl + O, select the file m4r tail just created and click Open.

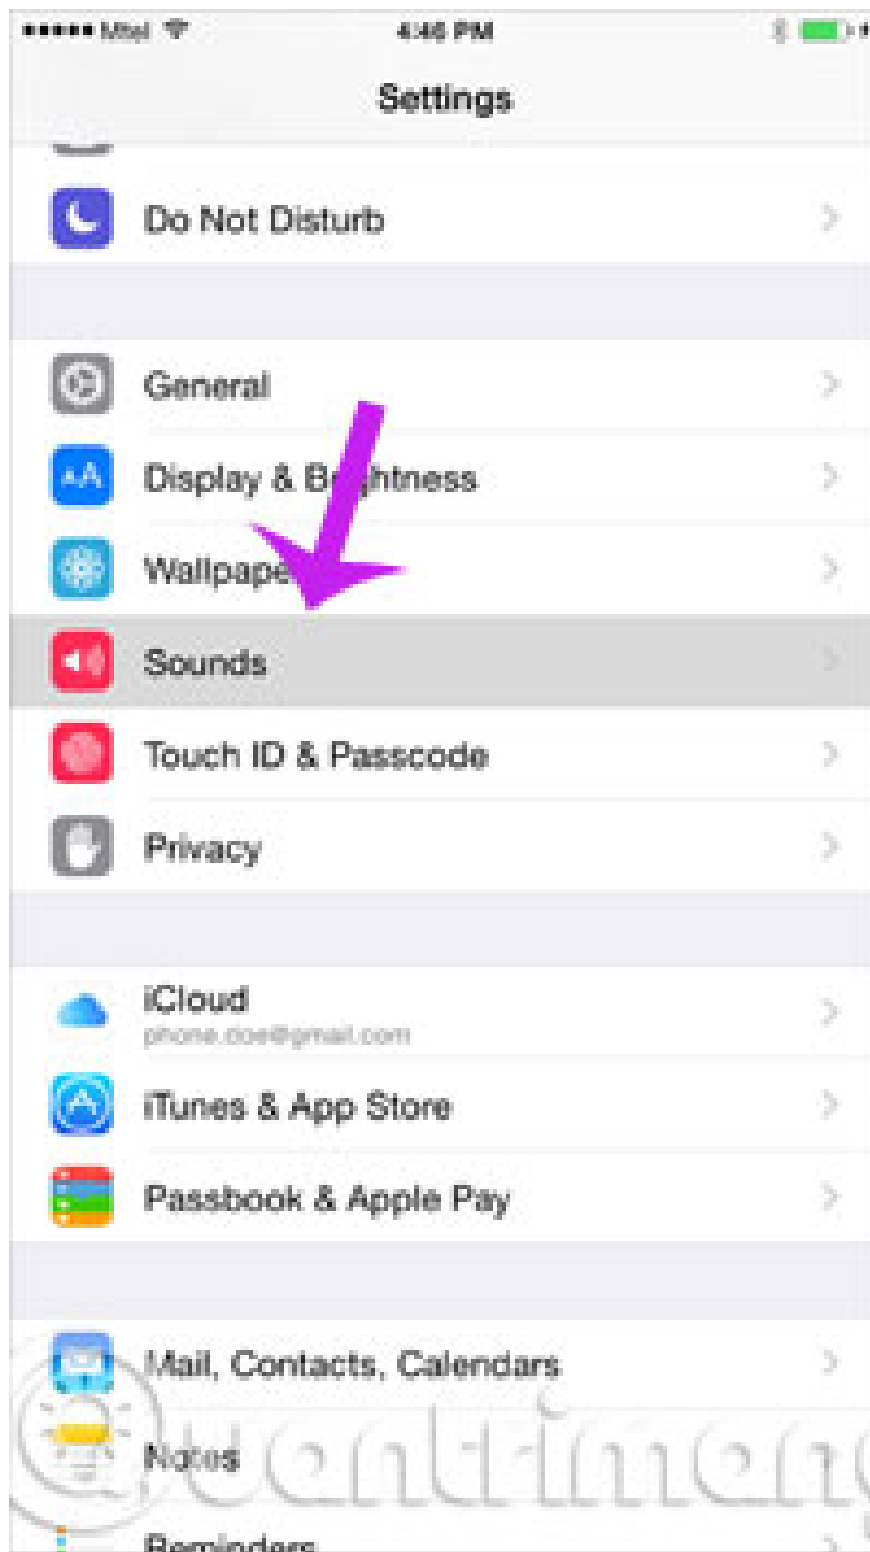

### Step 7 : Sync ringtones on iPhone and iTunes

Here you must proceed to connect the device to the computer to synchronize the ringtone. On the main interface of iTunes click the phone icon as shown below, select **Tones** on the menu on the left of the screen. Then, in the right column, select **Sync Tones** , then select the next to **All tones** . Finally click **Sync** to sync the ringtone.

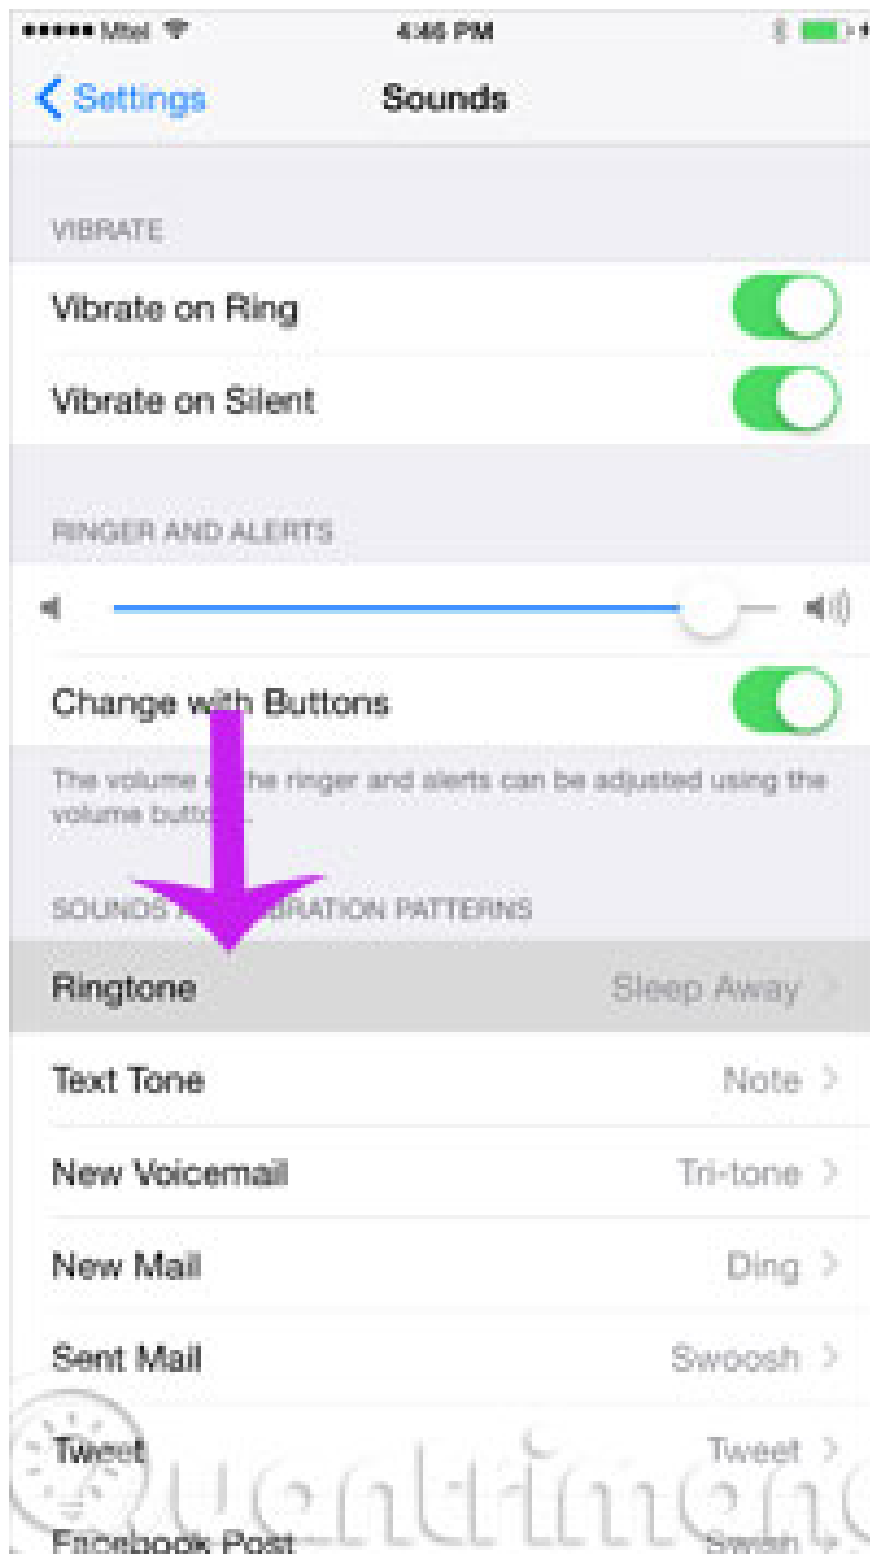

### Step 8 : Set the song as a ringtone

Now switch to your iPhone, select Setting and go to Sound.

### Step 9 : Complete installing ringtones on iPhone

In the **Sound** section, select the **Ringtone** section, you will see the ringtone you just created, select it as a ringtone for the upcoming calls.

So we have just introduced you how to create ringtones for iPhone with iTunes. Now you can freely use your favorite songs to make music for your "mobile phone" already.
