

How to create QR codes for PDF, Word, Excel documents for free, super fast

In today's digital age, sharing information via QR Code is widely used, especially in work. You can create QR codes for documents for others so that they can easily access the document without having to type the URL address.

QR Code is a type of two-dimensional barcode that can store information in the form of characters. When a QR Code is scanned, users can instantly access the linked content, such as a web page, PDF document, Word file, Excel file, or product information.

Some notes when creating QR codes for documents

- It is recommended to choose PNG format to ensure higher image quality.
- Make sure the QR Code size is large enough to be easily scanned by phone.
