

How to create semi-transparent images in GIMP

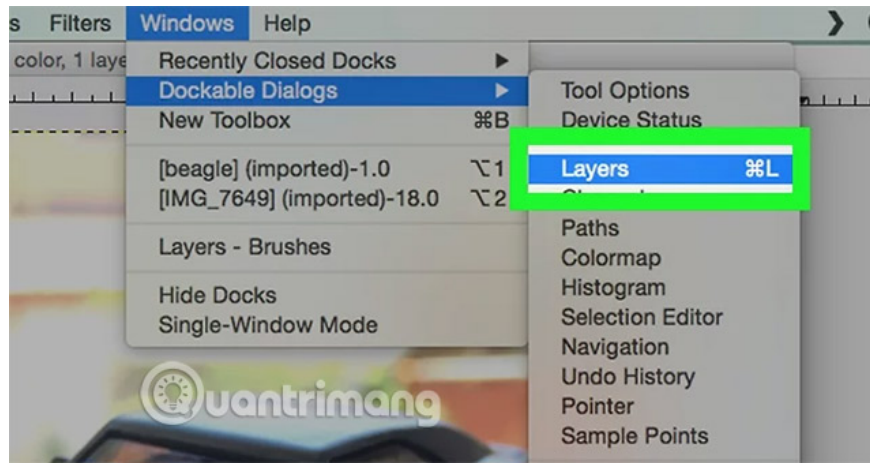

GIMP can create semi-transparent images very effectively, especially when users want to create business logos. GIMP is not difficult to use and this semi-transparent image creation process takes only a few minutes to perform.

If you want to manipulate images or simply want to design a logo for your website or business blog, you can use the GNU Image Manipulation Program, abbreviated as GIMP, as a free alternative. for advanced image editing software. GIMP can create semi-transparent images very effectively, especially when users want to create business logos. GIMP is not difficult to use and this semi-transparent image creation process takes only a few minutes to perform.

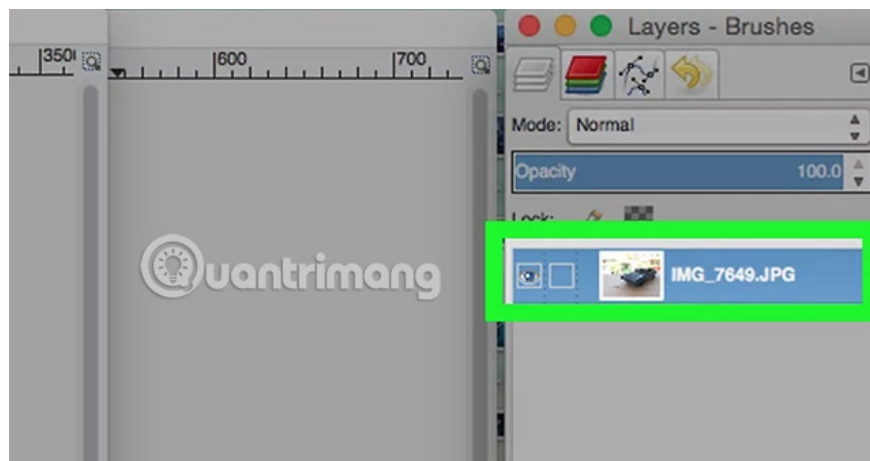

1. Launch GIMP and open the image you want to make semi-transparent.

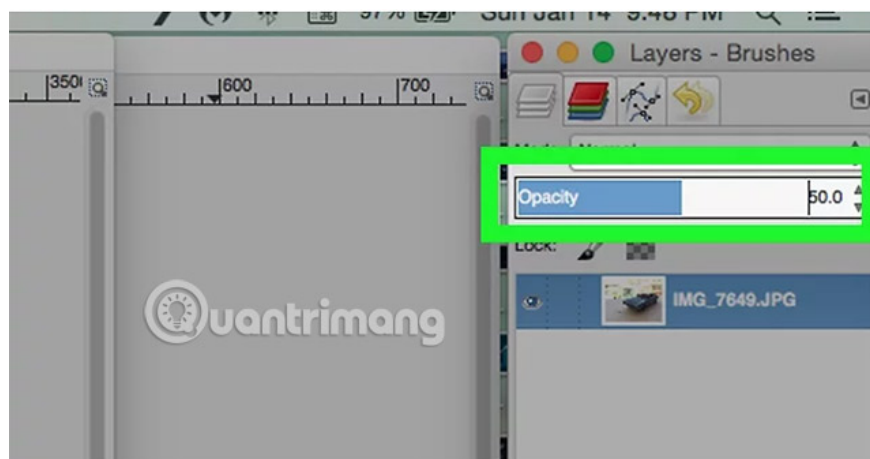

2. Press **Ctrl + L** to display the **Layer** tool box to the right of the GIMP window. You can also click "**Windows**" at the top and select "**Layers**" from the menu. The layer containing the image is selected by default.

3. Click and drag the "**Opacity**" slider at the top of the **Layer** tool box to the left to reduce opacity and increase transparency.

4. Set the **Opacity** slider to "**50**" to create a semi-transparent image.

5. Save images in GIF, TARGA, PNG or TIFF format to maintain transparency.

Users can also enter the number **"50"** in the box next to the **Opacity** slider and press **"Enter"** to make the image semi-transparent.

Good luck!
