

How to create Settings key, Delete tweak on iPhone

To add the Settings or Delete tweak key on Cydia, you can install more CellDia tweaks.

With jailbroken iOS devices, it is definitely familiar with the installation of additional tweaks from Cydia. Users must access the contents of the content to display the details of the tweak to install or remove if not used. And to save that, tweaking CellDia will help us perform the installation or deleting tasks right from the list of tweaks.

Accordingly, there will be 2 Settings or Delete buttons currently in the tweak list, so that you can perform the operation without accessing the information section of the tweak. In particular, CellDia tweaks don't interfere too deeply into the system. The following article will guide you how to use CellDia tweak on iPhone.

Instructions for adding Settings, Delete Cydia tweaks

Step 1:

Users download CellDia tweaks from the Julio Verne archive in Cydia or Xarold. Refine unlimited version of installed operating system.

Step 2:

After installation is complete, users do not need to change any settings as other tweaks. The Settings button and the Delete button are automatically added to the tweaking interface on Cydia.

With the device that has not installed CellDia, there is no option. Users are forced to open the information interface of the tweak to perform another operation if desired.
