How to use the software Wise Hotkey Windows 10

1. Download Wise Hotkey for Windows

Step 1:

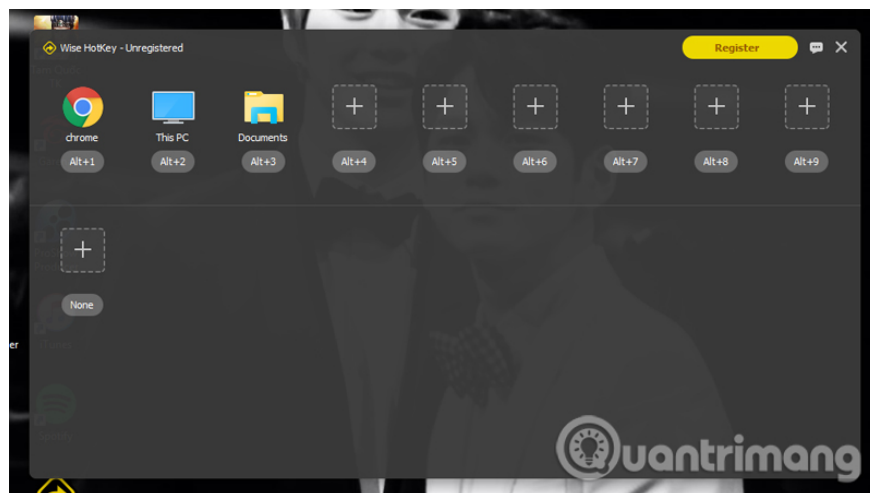

You read the Wise Hotkey software download following the link above and proceed with the installation. How to install Wise Hotkey as well as other software and do not have additional software installed.

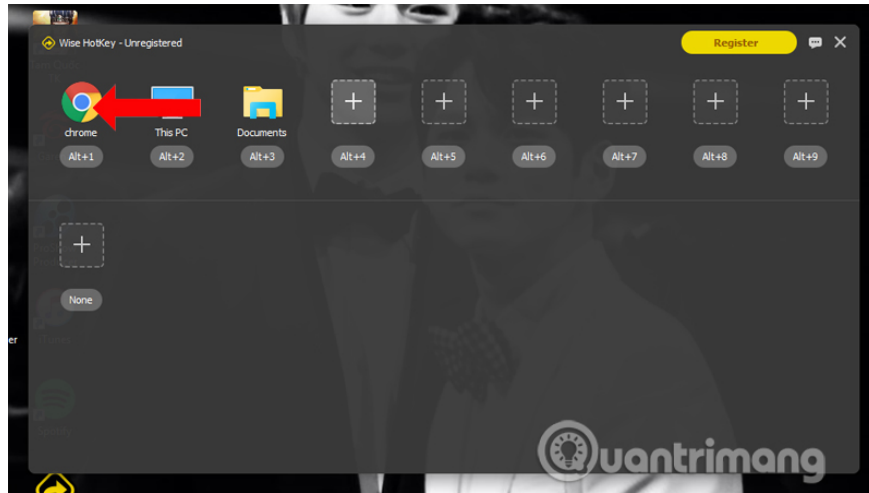

Step 2:

Start the interface of Wise Hotkey. In the main interface of the software you will see the tool has available access shortcuts for assigning applications, software, folders on the computer or the regular web page to access.

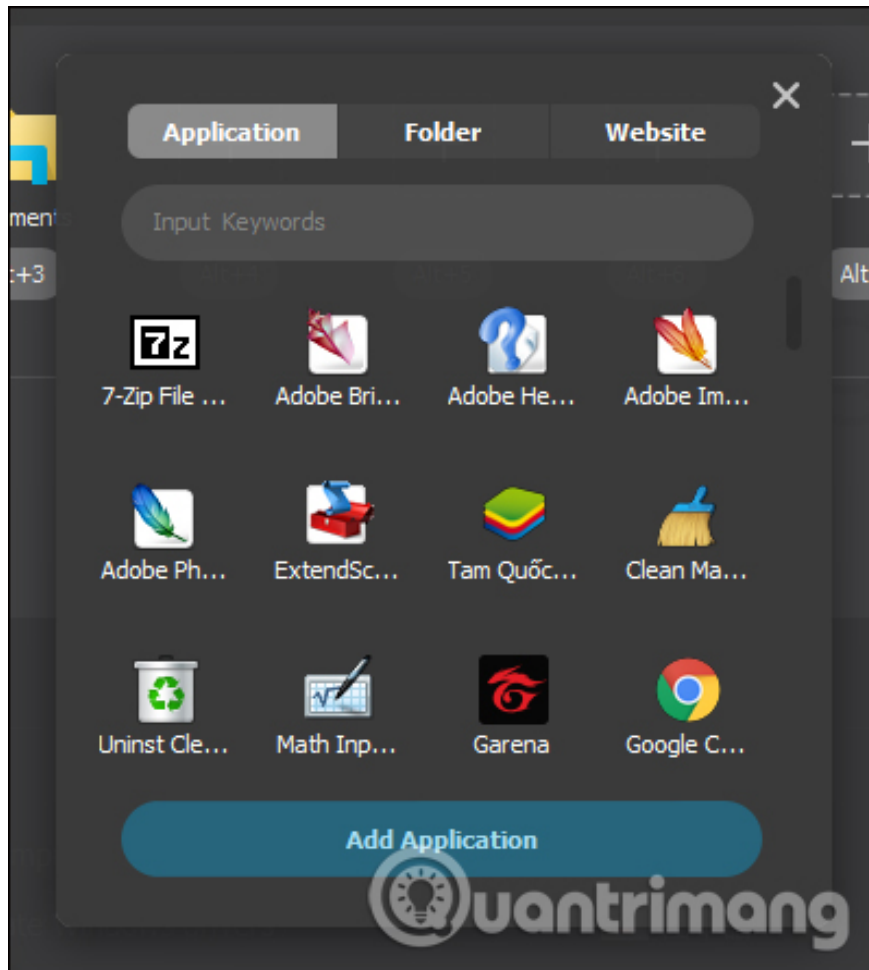

Note to readers , because using the trial version, we will only use 3 pre-set shortcut entries on the screen interface.

To add software to the Wise Hotkey interface, click on one of the icons you want to change.

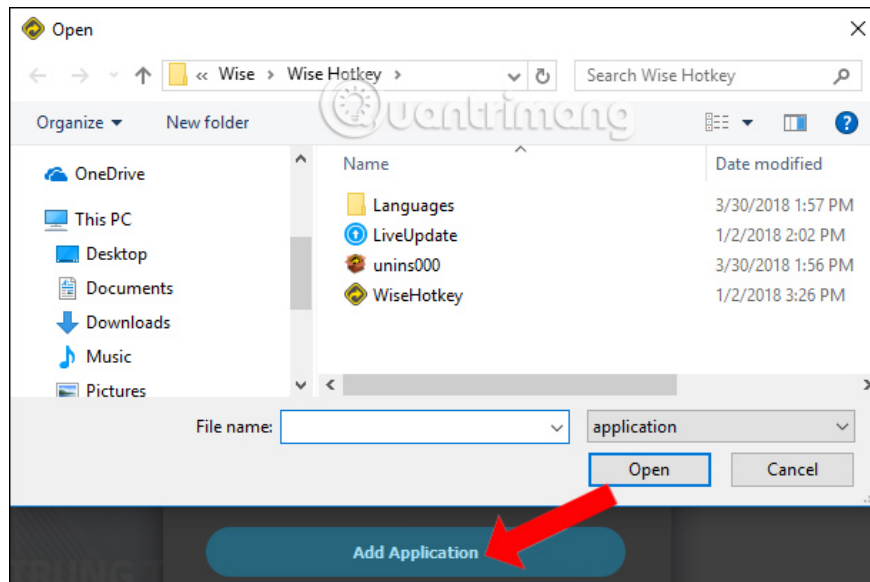

Then there appears a small dialog box with 3 Application options, Folder and Website.

Step 4:

Select the software to install on the computer you want to access quickly with the shortcut in the list, or enter the search keyword in the horizontal bar above and then click.

In case the software you want to use is not in the list, click **Add Application** and then locate the installation folder to add the Wise Hotkey interface.

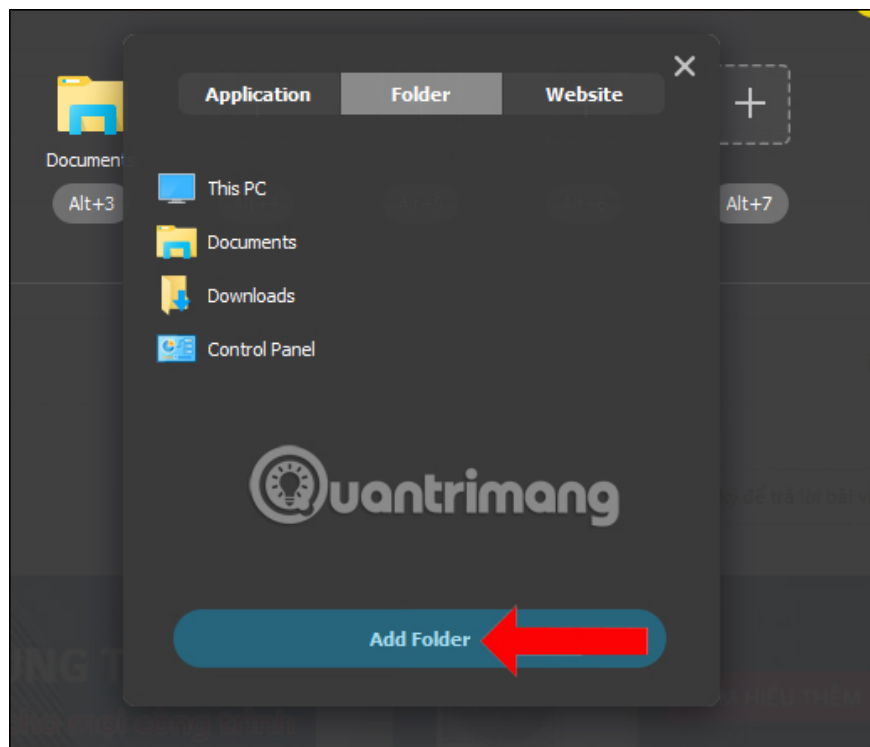

Soon the software you choose will appear in the Wise Hotkey interface with the selected shortcut. **Note that** applications on Windows Store will not be able to use Wise Hotkey.

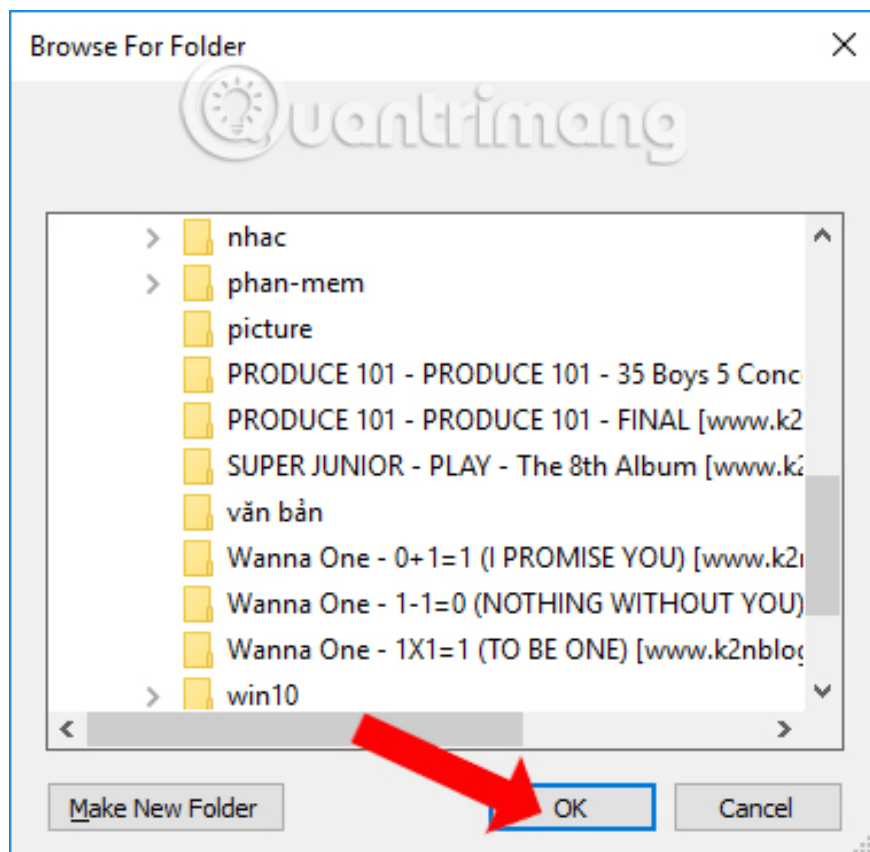

Step 5:

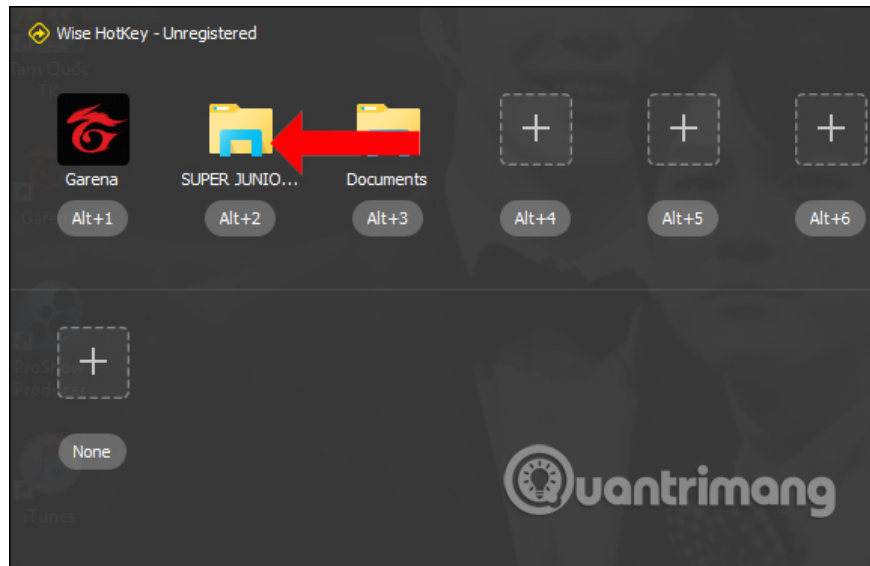

To **add a folder** to the Wise Hotkey interface, click on **the Folder item** and then click on **Add Folder** to add more folders.

Find the folder you need to assign a shortcut on your computer, click and then click the OK button to add.

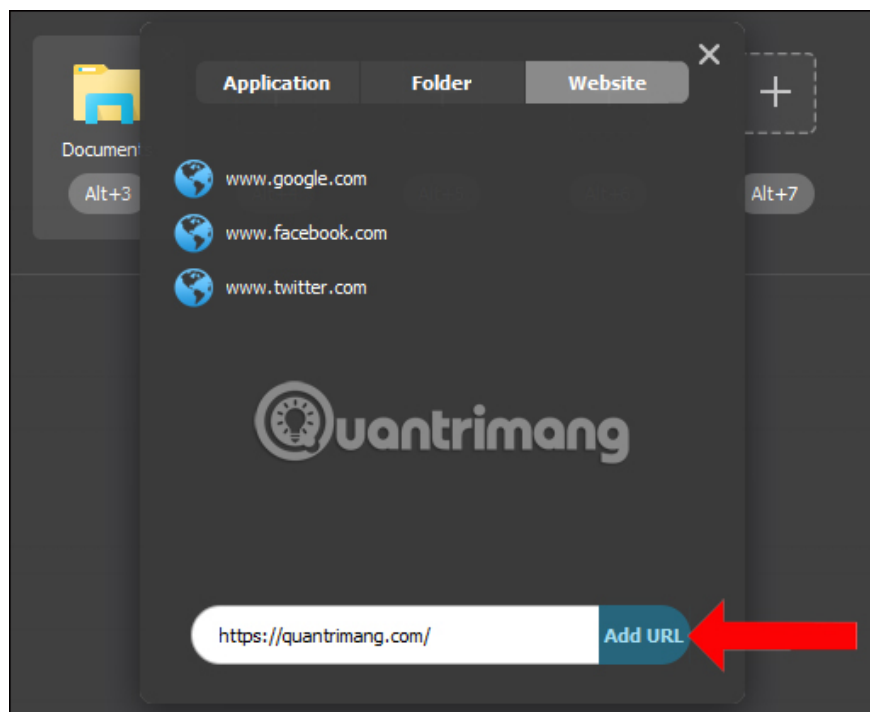

The folder also immediately appears on the Wise Hotkey interface.

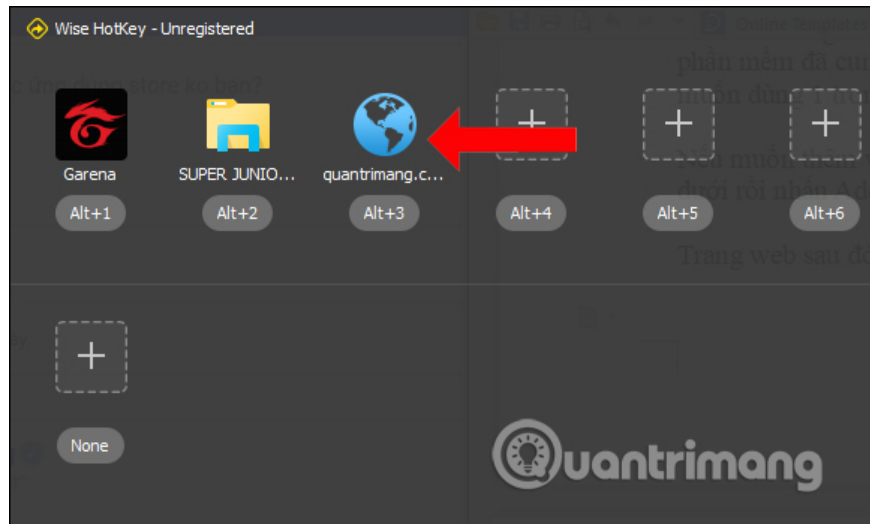

Step 6:

To **add** frequently visited **websites** , click on **the Website section** . By default, the software has provided you with Facebook, Google and Twitter pages. If you want to use 1 of these 3 websites, click on it.

If you want to add another website, **enter the page URL** into the Input URL below and click **Add URL** .

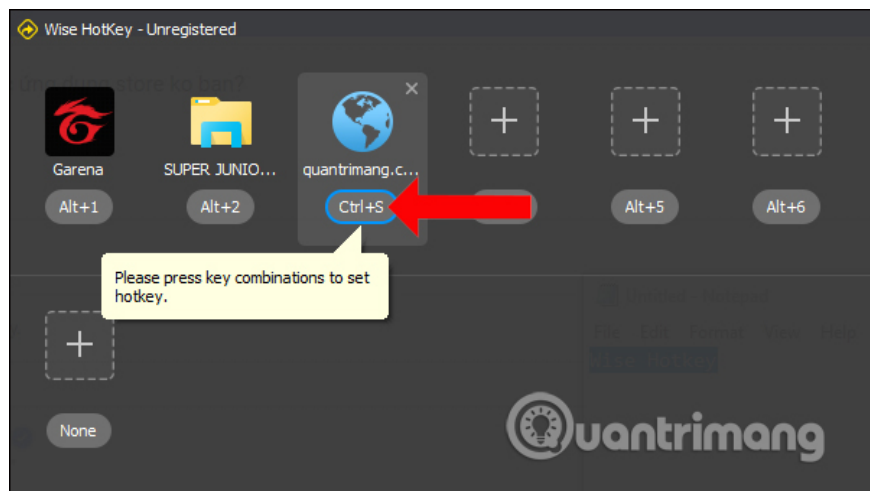

The following website will also appear on Wise Hotkey's interface.

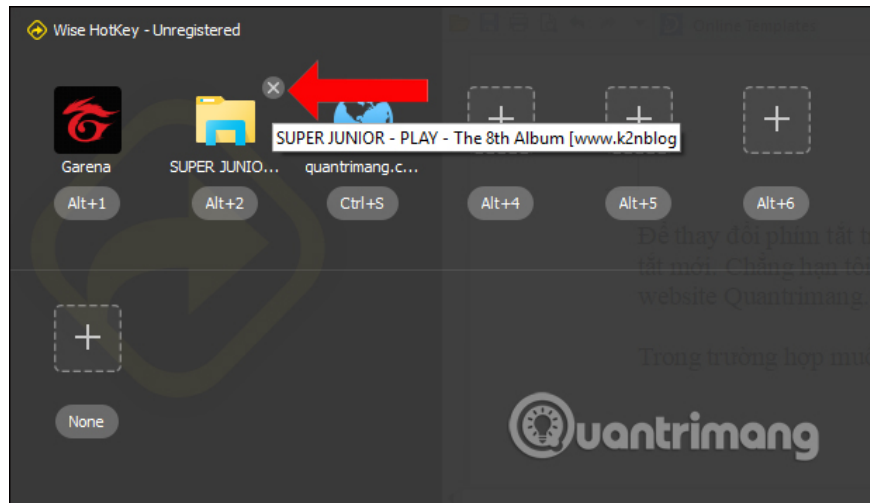

Step 7:

To **change the access shortcut**, tap the shortcut you want to change and then enter the new shortcut key combination. For example, I changed Alt + 3 to Ctrl + S to quickly open the TipsMake.com website.

In case you want to delete the established shortcut, click on **the x sign** to be.

So with Wise Hotkey software, users will quickly access software, folders, websites through shortcut keys. You can use the shortcut assigned by Wise Hotkey, or change to another key combination that suits your usage habits.
