

# The most complete and detailed guide on how to create videos on Grok AI in 2026.

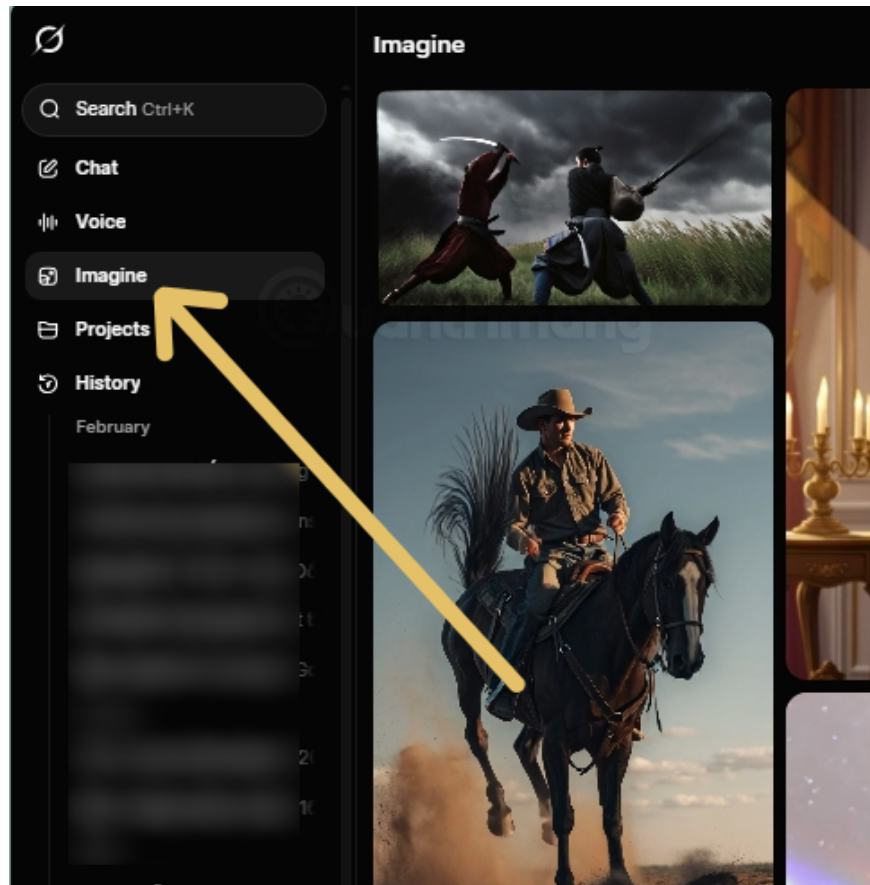

Grok Imagine represents a new leap forward in the field of creative AI, offering a simple way to transform images into animated videos.

Grok Imagine revolutionized AI content creation in 2026. With just one or two simple steps, you can transform text descriptions or still images into lively short videos with sound. Below is a detailed guide on the most effective ways to create videos on Grok today.

## 1. How to create Grok videos using prompt and commands

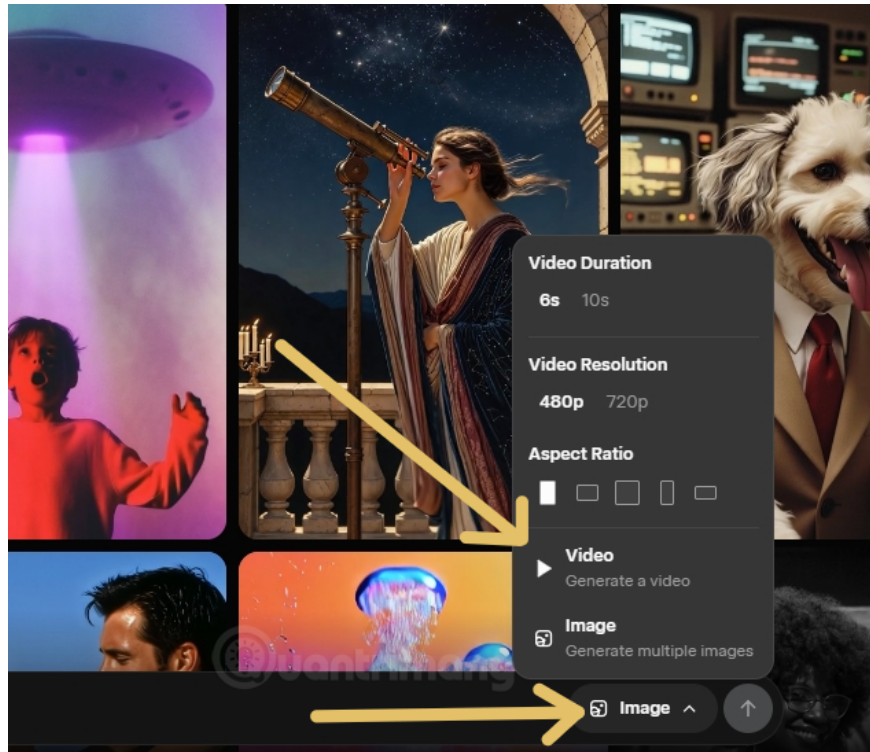

This is the most creative method, allowing you to turn even the craziest ideas into lively clips without needing original footage.

**Step 1:** In the Grok interface, select the Imagine option.

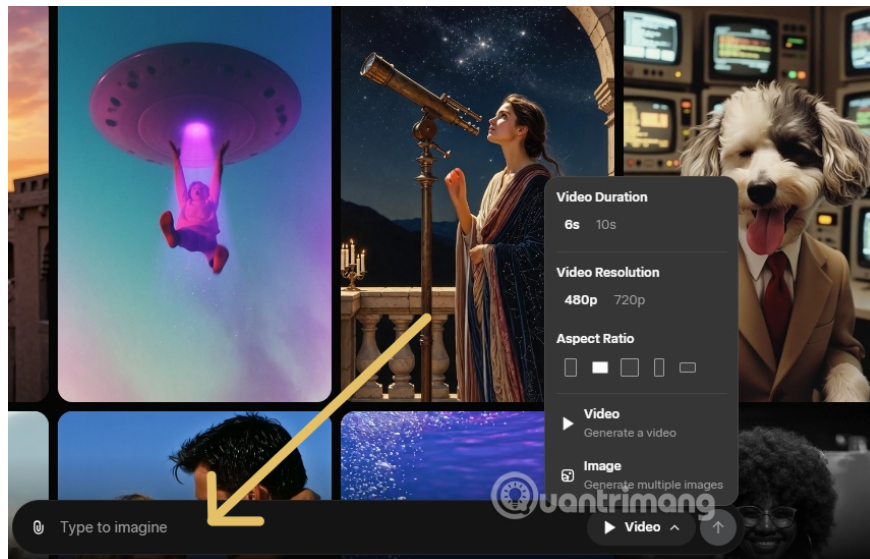

Step 2: In the prompt box , click Image and select the Create Video option. Next to this option, you will have other options including:

1. **Video Duration:** The default video length is 6 seconds, and if you want a 10-second video, you will need to purchase the Super Grok package.
2. **Video Resolution:** Currently, Grok only allows users to create videos in 480p and 720p resolution, while HD resolution requires users to have a Super Grok package to use it.
3. **Aspect Ratio:** You can choose from various aspect ratios including 1:1 square, the default 16:9 landscape screen, 9:16 mobile, etc.

**Step 3:** Finally, after selecting the aspect ratio, quality, and duration, enter a detailed description in text. For best results, use English along with stylistic adjectives.

**Step 4:** Press Enter to start creating the video.

Below is a video created by TipsMake.com using the prompt above in Grok AI.

**Prompt writing tip:** For a smooth video, use verbs indicating movement such as *flowing*, *flying*, *walking*, and *zooming in*, combined with your desired visual style.

## 2. How to create a video using photos created on Grok

This feature helps you maintain consistency: create a beautiful image first, then "breathe life" into it and bring it into motion. This is the best way to control the quality of the input image.

**Step 1:** Select the Image option (1) and enter prompt (2) and then select Create (3) to have Grok create any static image from the command as usual.

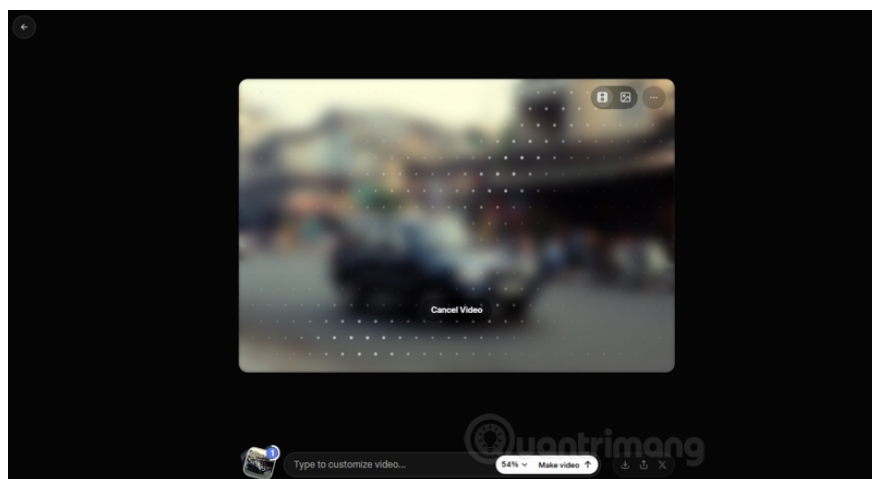

**Step 2:** After the image appears, Grok will show you countless versions of the image you created. If you want to create a video from any image, simply select the video playback icon in the corner of the image or click directly on the image you want to create a video from.

Step 3: The video you select will be automatically generated by default. This video will have the basic movements you used when creating the video, but of course, it will be suitable for the prompt content you previously selected.

For example, TipsMake.com created an image of a car driving on the streets of Hanoi in 2004. When the image was converted into a video, the car would move exactly as shown in the image creation prompt. The sound would also be created appropriately.

This is the default video when you simply select the "Create Video from Photos" button. If you want to change it, type your request in the text box below (Type to customize video), for example, changes to animation, sound, adding voiceovers, colors. Grok will change any element for you. After typing your request, select "Make Video".

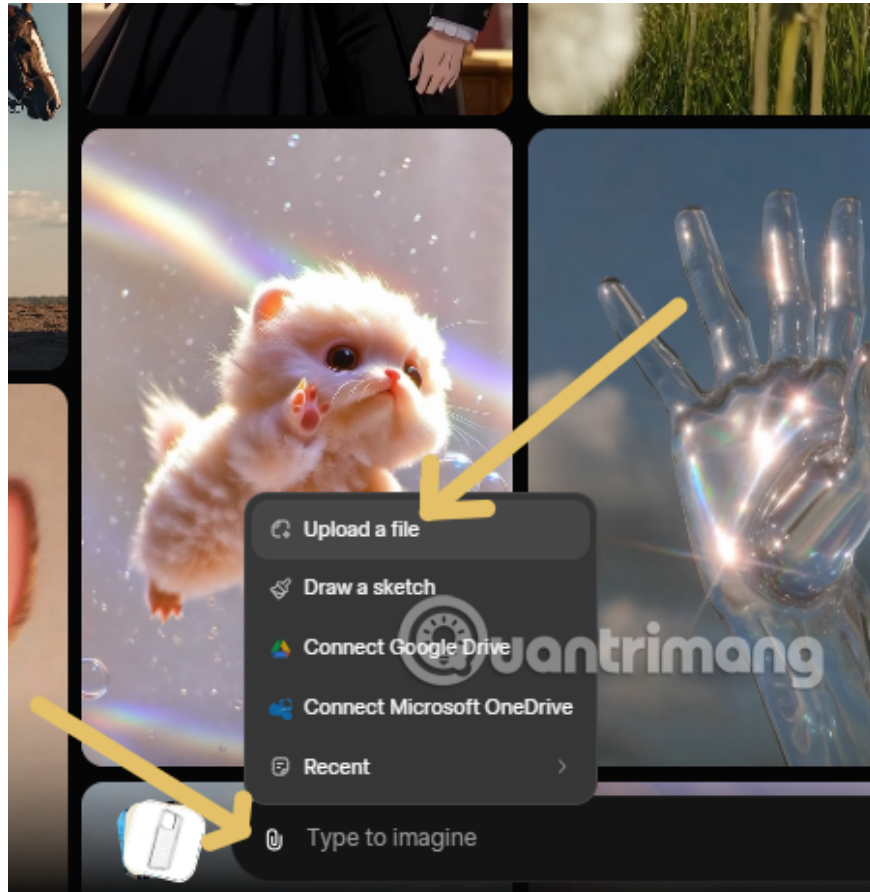

And this is what happens when you've been asked to add human voices and car engine sounds.

**Benefit:** This method helps you control the first frame of the video, preventing the AI from creating random images that don't match the original intention.

### 3. How to create a video from existing photos (uploaded from your device)

If you already have a commemorative photo, portrait, or design on your computer, Grok Imagine will help you transform it into a professional-looking video clip in just 15 seconds.

**Step 1:** Select the Image feature > select the attachment icon > Upload a file

**Step 2:** Choose to create a video. You can ask Grok for more specific instructions regarding audio, images, and transitions to create a high-quality video.

**Step 3:** Customize animation settings:

1. **Normal:** Maintains the original image structure, adds subtle physical movement.
2. **Fun:** AI will dramatically modify and create unexpected, humorous, and artistic effects.
3. **Spicy:** Adds powerful effects in terms of color, transitions, sound, etc.

**Step 4:** After processing is complete, choose one of the four audio mixes that Grok automatically suggests to finalize the video. For example, this is a video that TipsMake.com uploaded promoting a phone case and added voiceovers to advertise it.

## What is Grok Imagine? Why should you use it?

**Grok Imagine** is a powerful extension of the Grok chatbot (part of Elon Musk's xAI ecosystem). Initially designed to create images, by 2026, the tool will have advanced further with the ability to create short videos ranging from 6 to 15 seconds.

It works based on an advanced AI model, helping to create clips with natural movement and corresponding sound. This feature is currently mainly available to users who subscribe to **Premium+** or **SuperGrok** on the X mobile app.

### The outstanding advantages of Grok Imagine:

1. **Ultra-fast processing:** It only takes about 15 seconds to export a complete video.
2. **Easy to use:** Requires no advanced video editing skills, suitable for social media users who need a quick and easy solution.

3. **Audio integration:** The created clips always include background music or sound effects that match the context.
4. **Cost-effective:** Free or significantly cheaper than other dedicated AI video creation software.

## Tips for achieving the best video quality.

Although Grok Imagine is very clever, it is still in the development (Beta) phase, so please note:

1. **Detail quality:** Sometimes small details like the character's eyes or fingers may be slightly distorted.
2. **Length:** Currently, videos are limited to short lengths (under 6 seconds), suitable for Stories or Reels.
3. **Copyright:** Please ensure you have the right to use the images when uploading from your personal device.

**In conclusion:** Grok Imagine is the ideal tool for transforming static ideas into engaging, dynamic content. If you're looking for the quickest way to make your X profile stand out, this is definitely an option you shouldn't miss.
