

How to create WiFi hotspot on UC Browser web browser

UC Browser is a web browser for computers with rich features, fast surfing speed, especially can use the computer to become a free WiFi hotspot.

In order to be able to turn your computer into a free WiFi hotspot for other devices, we will normally have to use professional software such as Wi-Fi playback using Wi-Host software, or mHotspot. These software will help users to turn their laptop into a place to send WiFi to smartphone devices, or even for other laptops.

However, things will become much simpler when we use UC Browser. UC Browser web browser for PC owns friendly interface, access speed as well as fast file download. Especially, the feature to turn the computer into a free WiFi hotspot. We will not need to install any other programs, but can use the UC Browser right away to support other devices that can catch WiFi waves.

Play WiFi on your computer using UC Browser

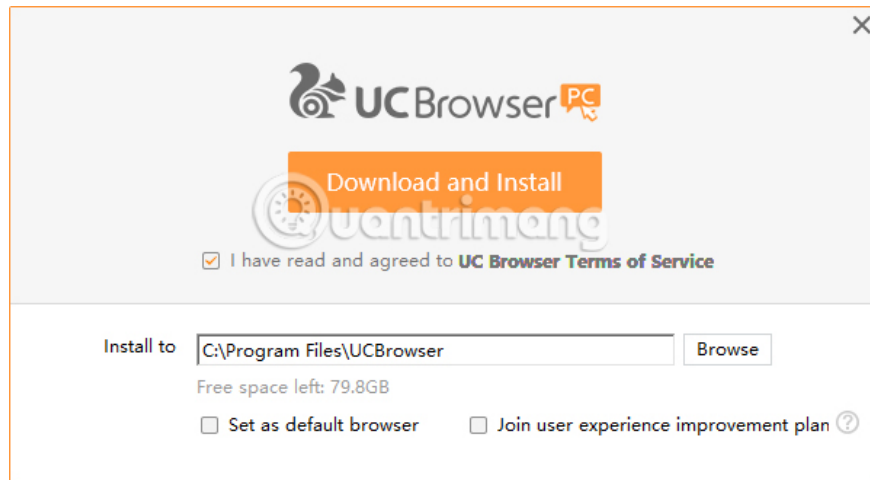

Note , this feature will only apply to computers with wireless network cards available

First of all, download UC Browser for your computer following the link below:

1. Download UC Browser for PC browser

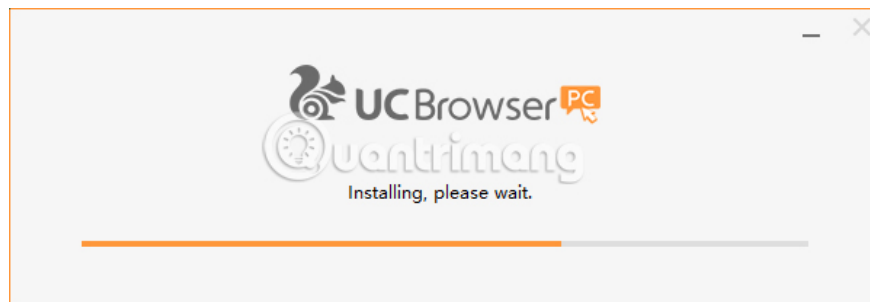

Step 1:

After downloading UC Browser file to your computer, you proceed to install the browser. First of all, we will click on **Download and Install** .

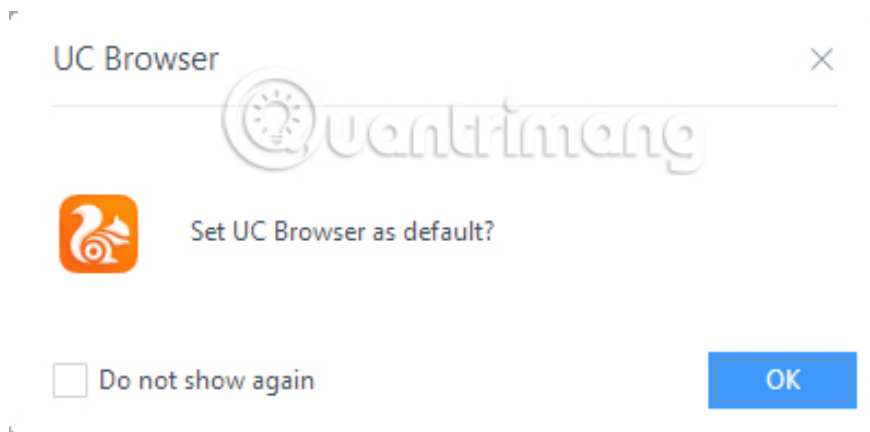

Step 2:

Then we wait for the successful installation of UC Browser on your computer.

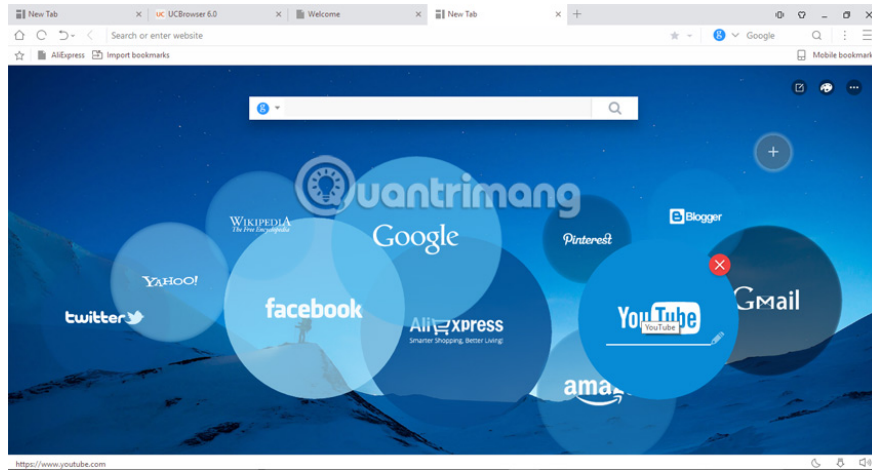

Soon the interface of UC Browser will appear. Here a small dialog box appears and asks if users want to set UC Browser as the default browser on the computer.

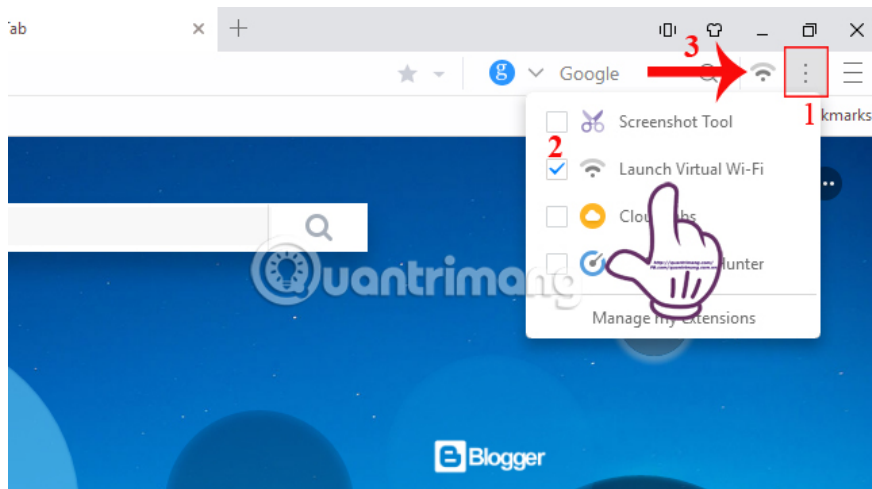

Step 3:

Here is the interface of UC Browser web browser on the computer.

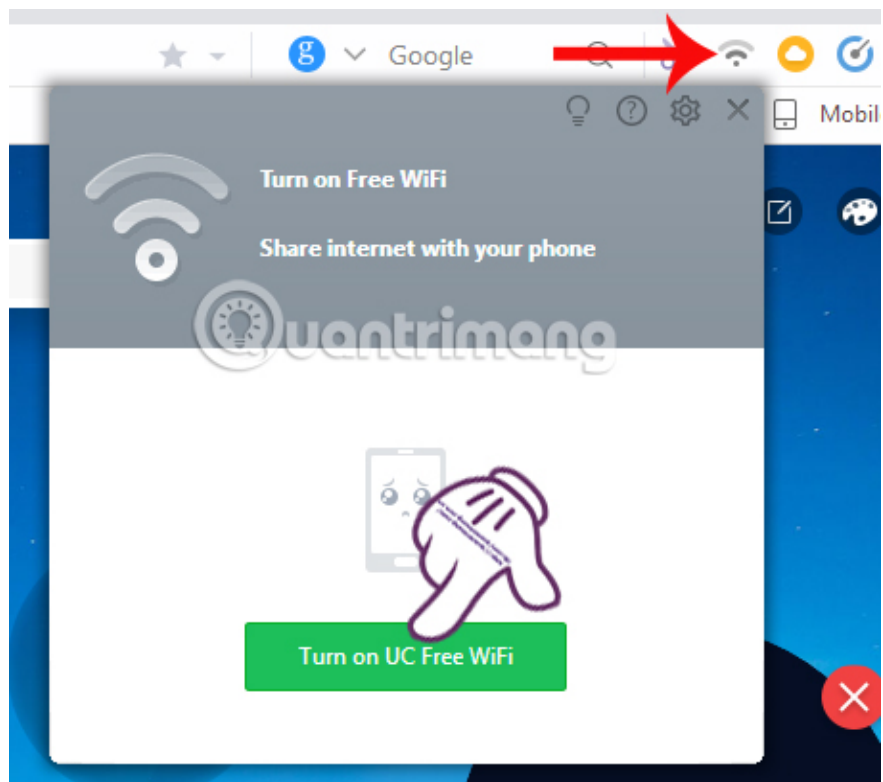

Step 4:

To find the free WiFi feature in UC Browser web browser, in the main interface, we will **click on the 3 vertical dots icon** as shown below, then **select the Launch Virtual WiFi feature** . Instantly **the WiFi icon** will appear on the interface.

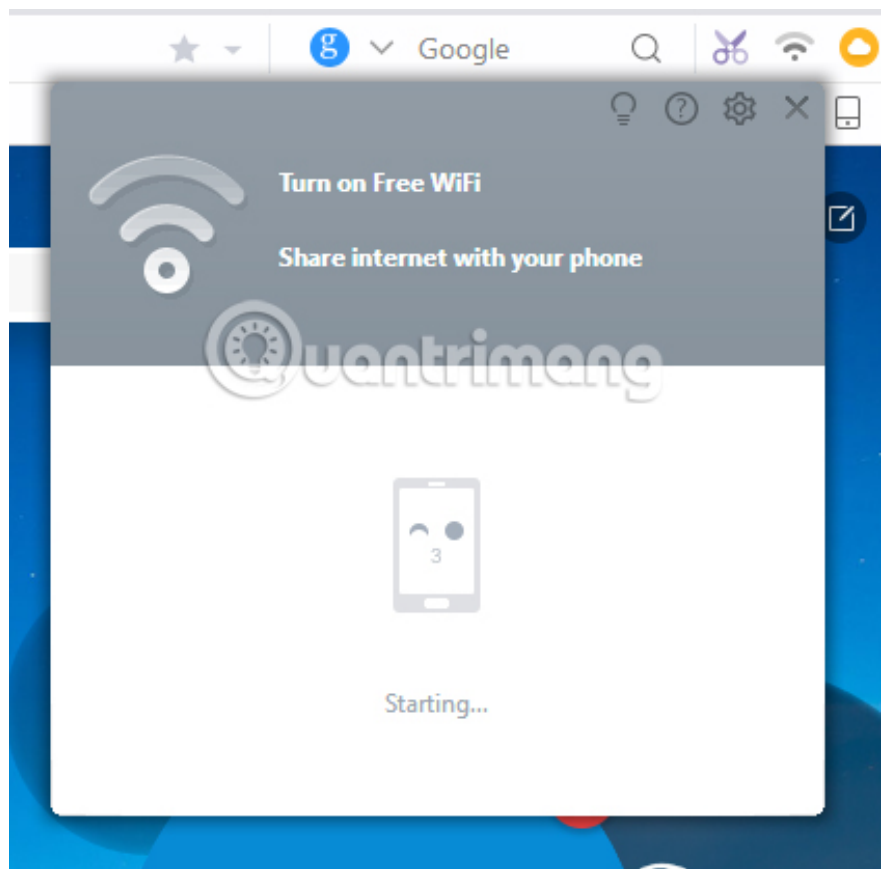

Step 5:

Next, when you click on this WiFi icon on the browser will appear a small dialog box. Here, click **Turn on UC free WiFi** .

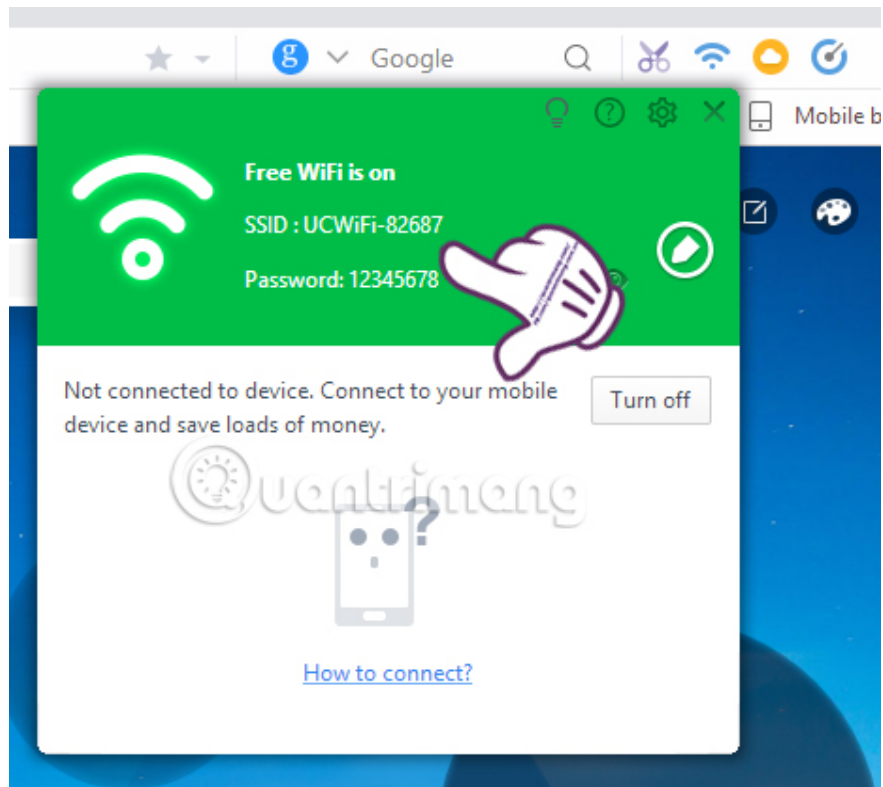

You wait a few seconds for UC Browser to set up WiFi network.

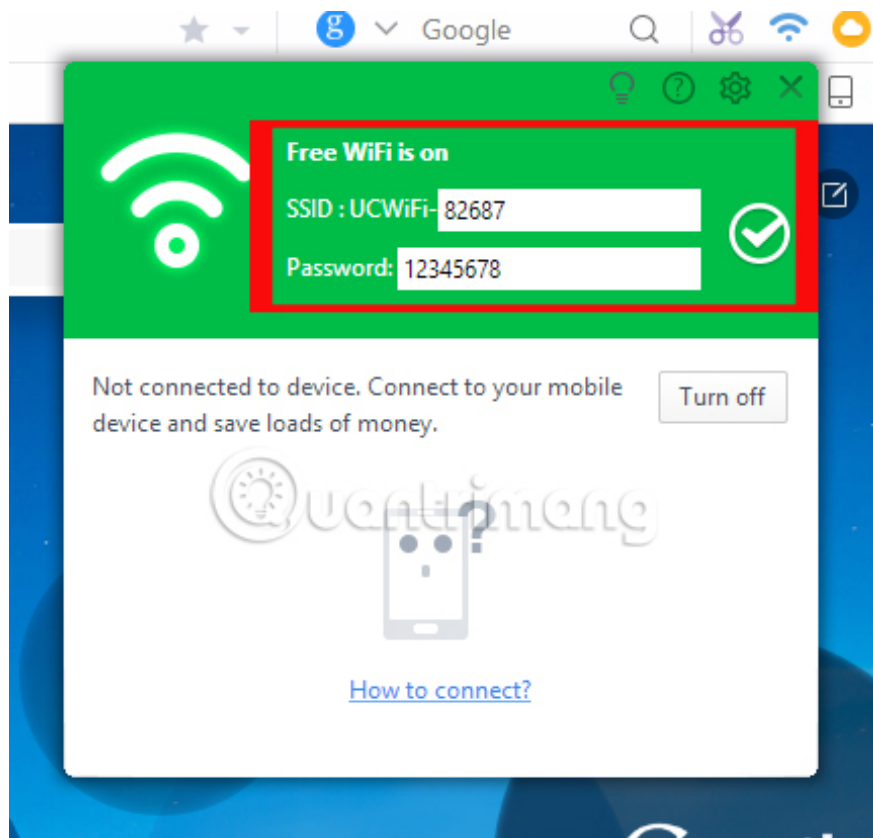

Step 6:

Soon the browser interface will appear dialog box with information of the WiFi has been set up, including the name and password of that WiFi.

If you want **to edit the** name and password information for WiFi, users click on **the pen icon** also in that interface. If you want to **hide the password** , click on **the circle icon** below.

Step 7:

After you have finished changing the name and password for WiFi, we just need to use any device, from laptop to smartphone to search for WiFi network that is broadcast from the computer, via browser UC Browser.

We just need to enter the correct password to be able to connect to WiFi and surf the web already.
