

# How to customize the application icon on iPhone

To customize the application sticker on iPhone, we can install LabelChanger tweak.

The application stickers on iPhone are set by default according to the iOS operating system, or according to the application icon when you download from the App Store. If users want to refresh these stickers, you can install LabelChanger tweak for jailbroken iOS 9 devices.

Accordingly the application provides many different options for you to change the interface for application stickers. For example, we can change the color of the sticker, add the border to the application's sticker, hide the application sticker or replace the application icon into the color, . The following article will guide you how to change Change application sticker on iPhone.

1. How to create application icon on iPhone / iPad without jailbreak
2. How to adjust notification number on iPhone application icon
3. How to customize the iPhone Home screen
4. How to append to an icon on iPhone

## Instructions for changing iPhone application sticker

### Step 1:

Users download tweaks at Packix source on Cydia, or directly access the link below.

`https://repo.packix.com/package/com.daveapps.labelchanger`

Proceed to install the tweak as usual.
