

How to customize widgets on iPad

iPadOS 13 has been significantly improved, not only has a new feature, but the widget interface has also been changed, making it easier to manage and customize the widget.

iPadOS 13 has been significantly improved, not only has a new feature, but the widget interface has also been changed, making it easier to manage and customize the widget. Accordingly, the main screen on the iPad provides layout options and many widget widgets for us to redesign. You can add frequently used applications to the widget interface for quick use. The following article will guide you to add, and customize widgets on the iPad home screen.

How to customize the widget on the Home screen iPad

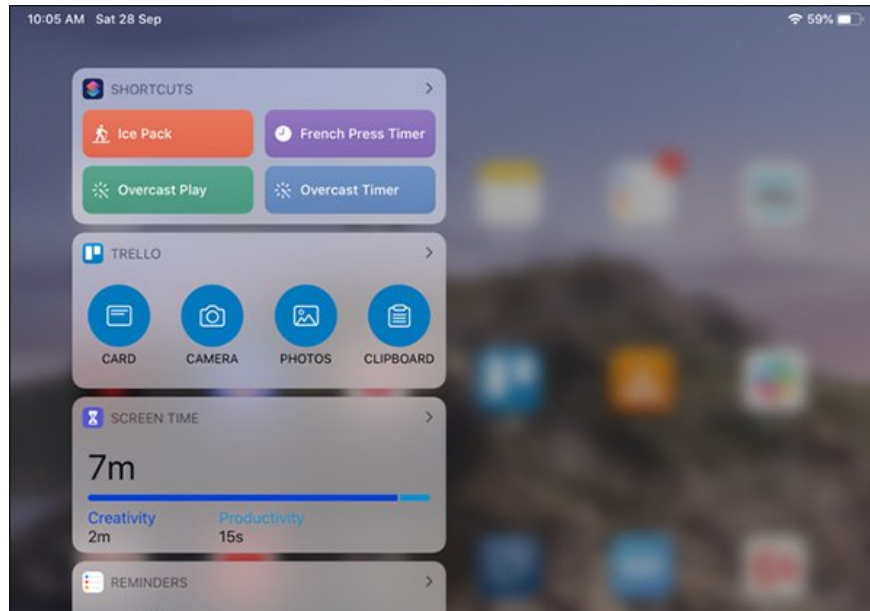

Step 1:

The main screen on the iPad has been added **with the Today View** , which appears in the left column on the screen. We just need to **swipe the screen from left to right to display the Today View interface** with the widget column.

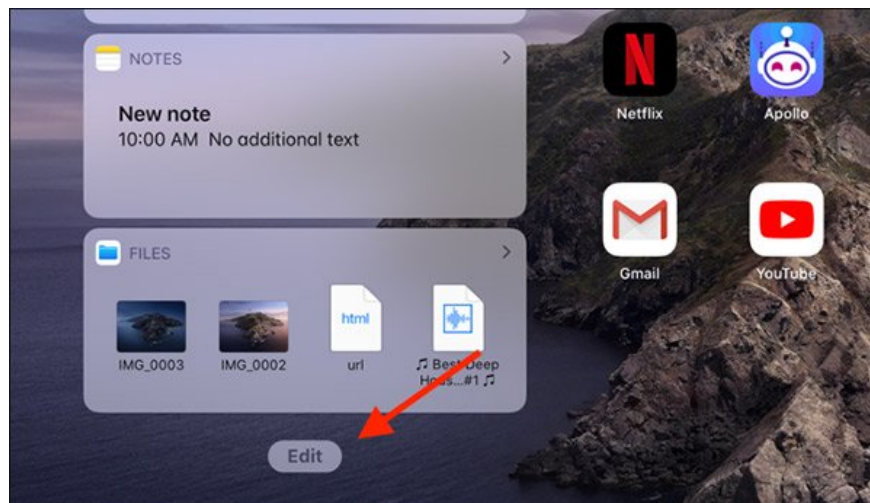

If you're in landscape view, the grid of app icons will shrink to show more apps on the screen, next to the Today View interface. Swipe the panel to the left to hide it.

In case you are in portrait view, simply swipe the home screen to the right to display Today View. At that time, the application icons on the screen will be blurred.

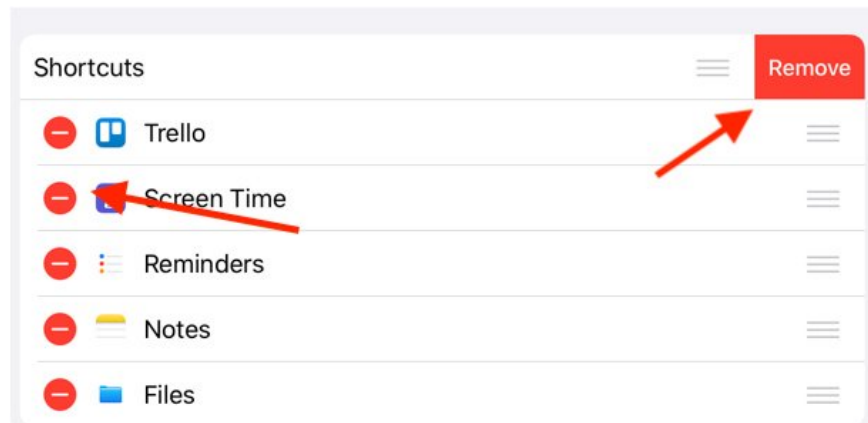

Step 2:

To add the desired widgets to the Today View interface , scroll down and then click **Edit** .

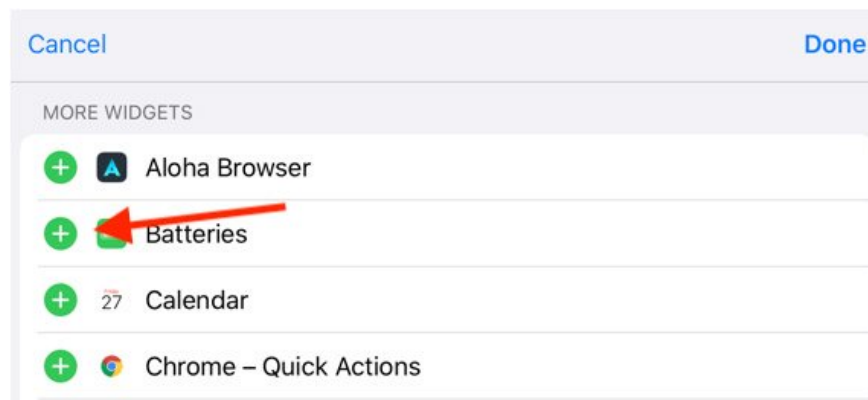

At this point we will see the widget is displayed. **To remove**, click on **the red circle icon** and **click Remove** to delete.

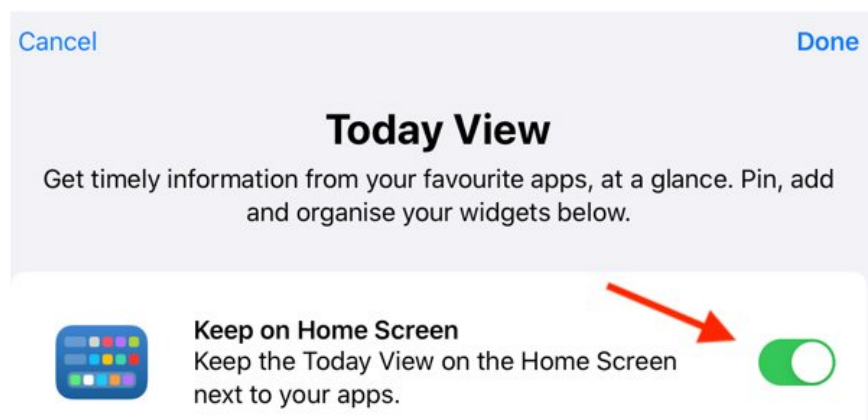

Step 3:

Scroll down to the **More Widgets** section to add the widget you want to use. To **add widgets to the Today View interface**, click **the blue circle**.

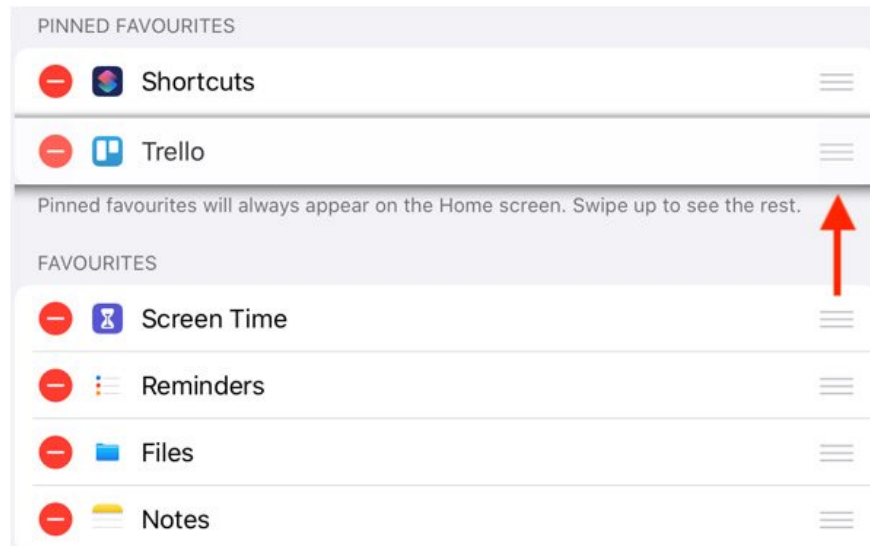

Step 4:

To pin the Today View interface to the iPad home screen interface, swipe from left to right to open Today View. Then swipe down and click Edit, then turn on Keep on Home Screen.

Shortly thereafter shows the **Pinned Favorites section** below so we can **drag any widget into this list** if we want to always show it on the home screen interface.
