

How to cut MP3 music and create phone ringtones using mp3DirectCut

You can easily and quickly cut MP3 music and create phone ringtones using mp3DirectCut from various sources without losing quality. To use mp3DirectCut to cut MP3 music and create ringtones, please refer to the following instructions.

mp3DirectCut is one of the most popular audio editing software programs currently available. You can use this utility to cut MP3 music, or a favorite segment from a song, and use those segments as ringtones, background music for a self-created video album, or for many other purposes (depending on your needs). Below, we will guide you on how to use the software to **cut MP3 music** for your mobile phone.

Additionally, if you prefer using Format Factory, check out the guide on **creating ringtones with Format Factory** . Compared to mp3DirectCut, **Format Factory** has the advantage of being free to use and not only cuts MP3 ringtones but also supports many other audio formats.

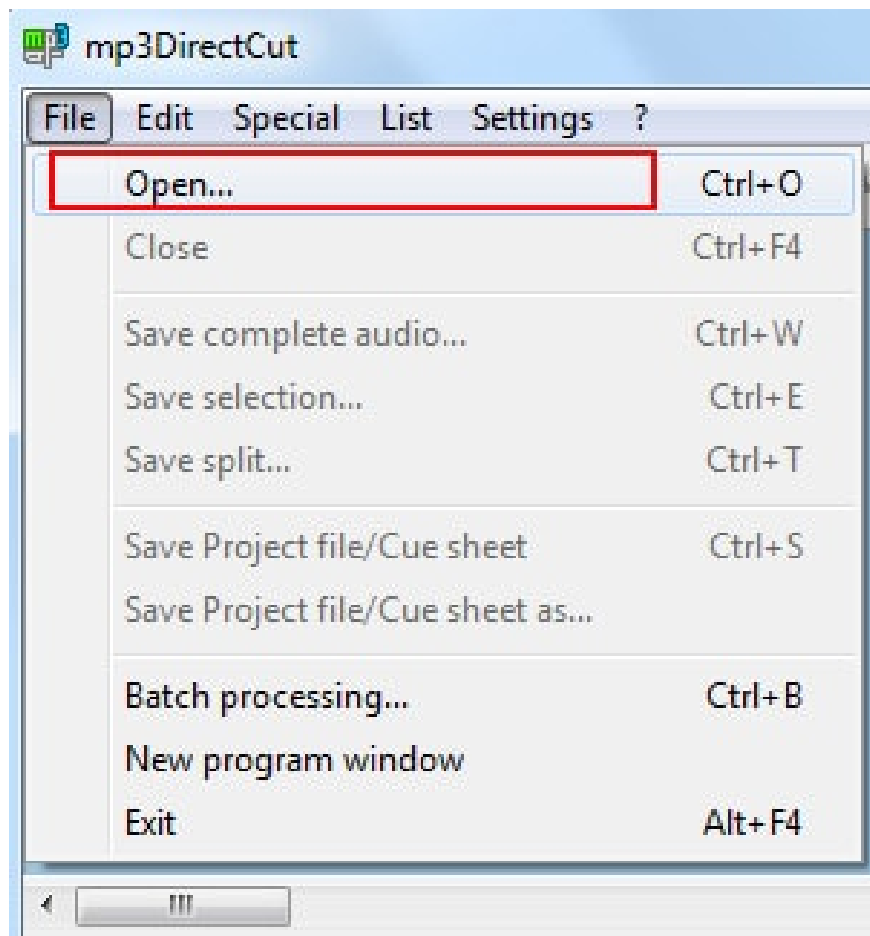

Instructions on how to cut MP3 music and create phone ringtones using mp3DirectCut

Cut MP3 music, create ringtones using mp3DirectCut

Download and install the latest version of mp3DirectCut.

Step 1: Open mp3DirectCut, select the audio file you want to cut by clicking **File --> Open** (or using the keyboard shortcut **Ctrl + O**).

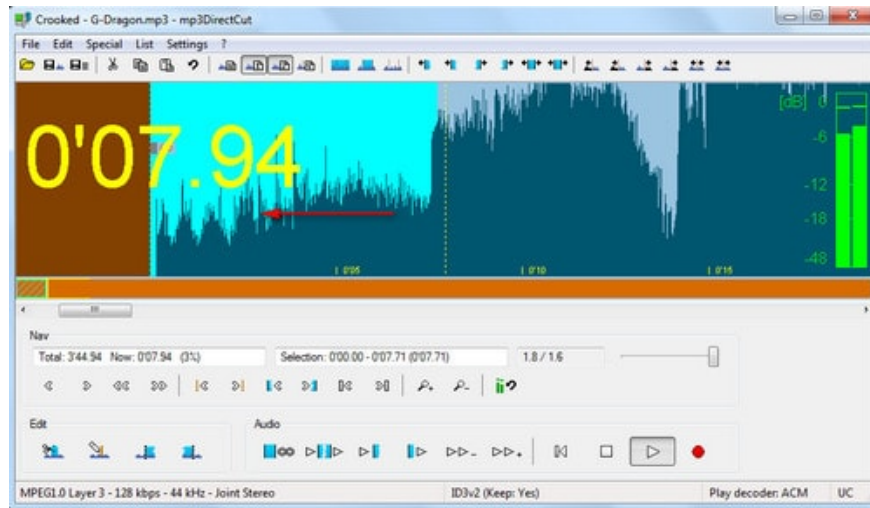

Step 2: After opening the audio file with mp3DirectCut, it will be displayed as a waveform for easy manipulation. To rewind the song, simply hold down the mouse button and drag the slider back to the beginning of the song. Use the **Play**

function to start the audio file. During playback, the time and volume of the audio file will also be displayed.

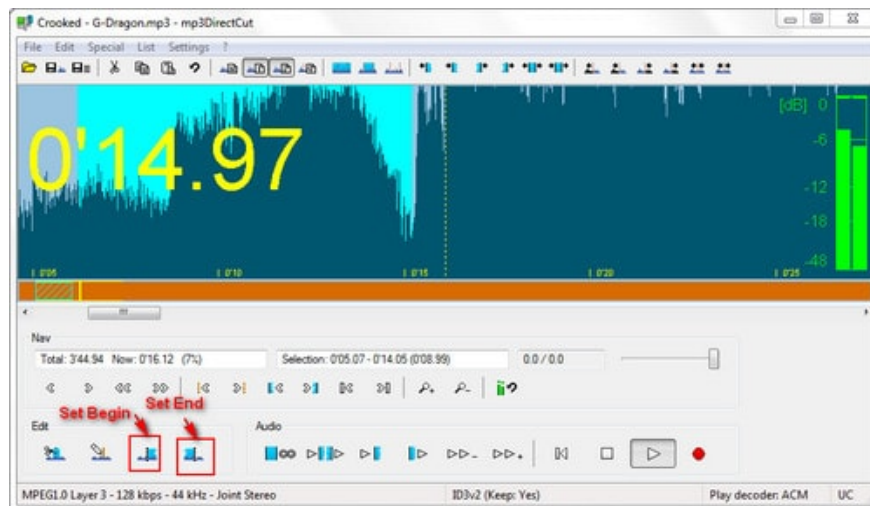

Step 3: There are two ways to cut a section of music.

Method 1: Simply hold and move the mouse to highlight the section of music you want to delete. Press delete to remove these sections and keep only the desired section. In this audio file, TipsMake will try deleting the section at the beginning of the song; the section to be deleted will be highlighted in blue.

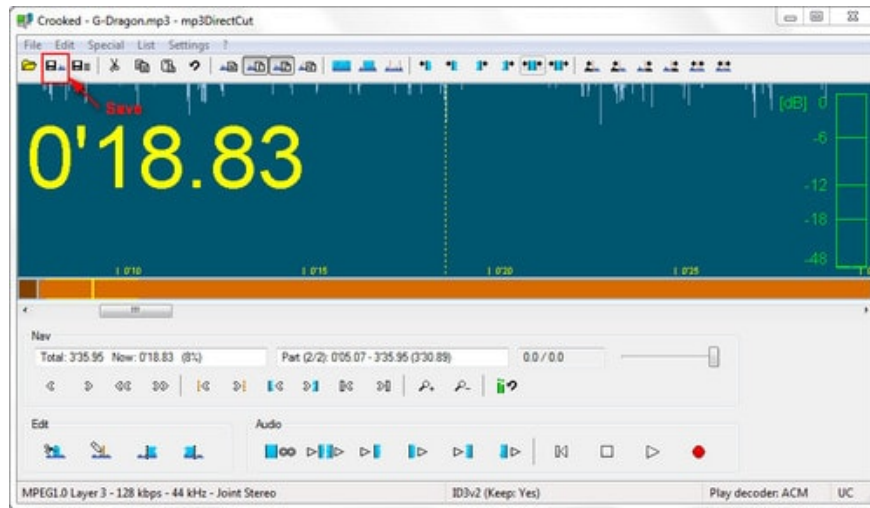

Method 2 : Use the **Set Begin** and **Set End** functions (the 3rd and 4th functions in the **Edit** section) to set the start and end times for the music segment.

Select the beginning and press **Delete** until only the desired music segment remains.

To save the trimmed music segment, select the **Save** function or use the keyboard shortcut **Ctrl+W**.

In conclusion : Use mp3DirectCut to cut MP3 music, create MP4 ringtones, and many other formats such as WAV or AAC. Besides this utility, you can download other **audio editing** software at TipsMake.
