

# How to cut photos from PDF to Word

To retrieve images from PDF files, you need to perform different tricks, not direct images. To teach readers how to cut images from PDF to Word, TipsMake.com asks permission to give the following methods.

To retrieve images from PDF files, you need to perform different tricks, not direct images. To teach readers how to cut images from PDF to Word, TipsMake.com asks permission to give the following methods.

## 1. Use online web to split photos

### 1.1. PDF to Image

Website address: [PDF TO IMAGE](#)

You access the PDF Image website, the interface of this page is easy to use.

You click **Upload file** to download PDF files can contain images to be taken to the site.

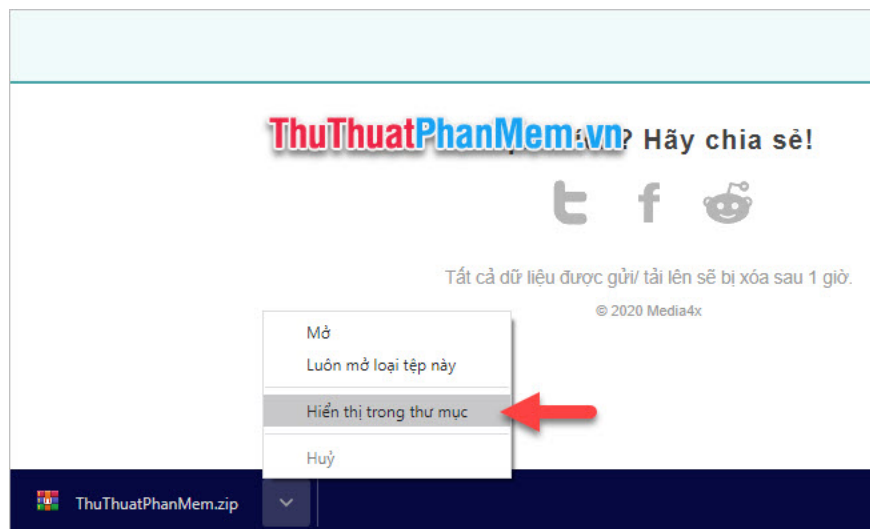

After selecting the uploaded file, the uploaded file takes a bit of time to upload successfully.

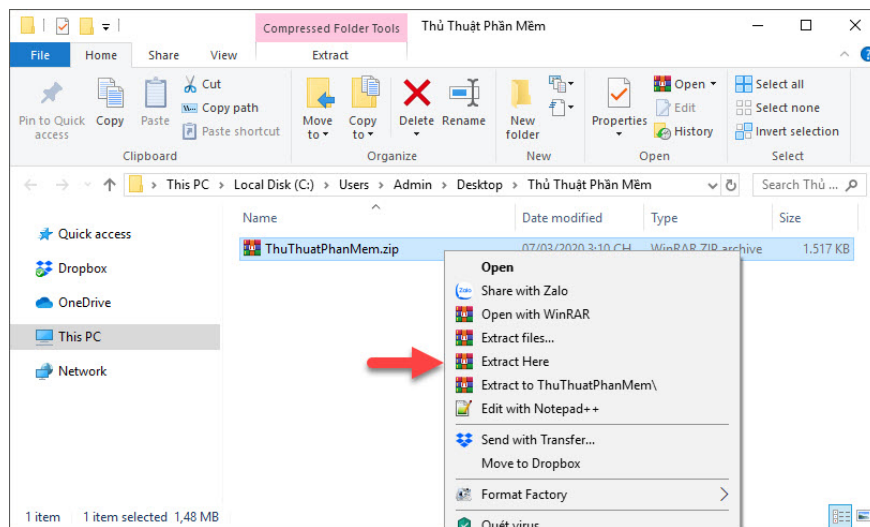

After the file has successfully uploaded, click the **DOWNLOAD DOWN** icon below the download file (or click **DOWNLOAD ALL** if you download multiple PDF files at once).

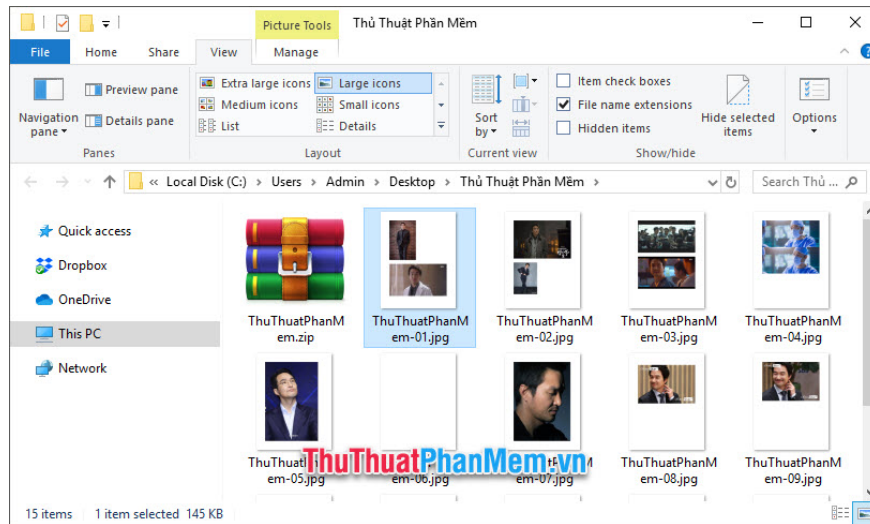

After downloading the zip file containing the image, open the folder containing the compressed file.

Proceed to extract the folder file as usual, right click and select **Extract Here** .

After extracting, you will see your PDF file has been compressed into photos like printed paper. Now you just need to insert the image into your Word file only.

## 1.2. PDF Candy

Website address: PDF CANDY

You access the website address and then click on **Select files** to display very prominently on the website.

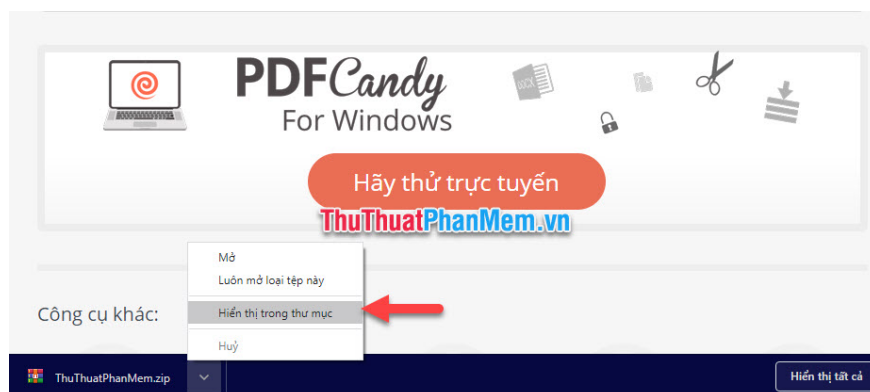

You choose the PDF file to extract images in your computer folder, after selecting the upload file, you need to wait a bit for the site to finish splitting the image.

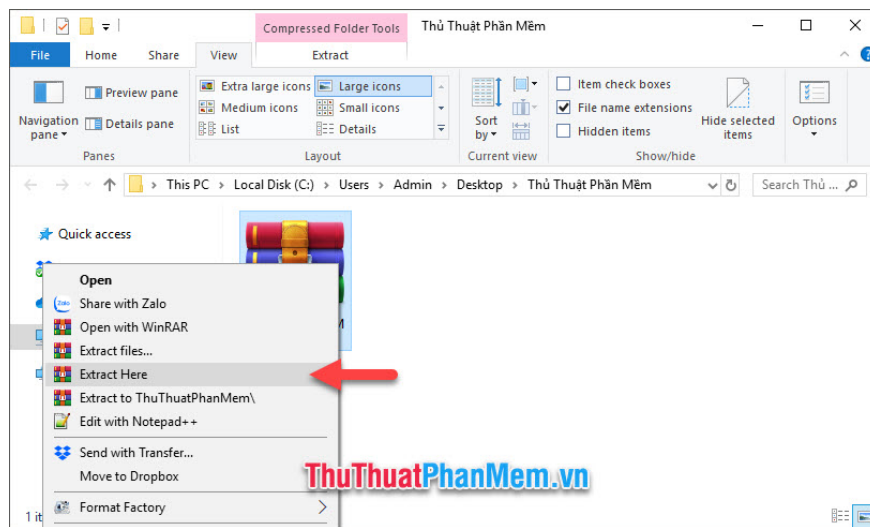

Then you can see the **Download file** button is displayed. Click here to download the extracted image files.

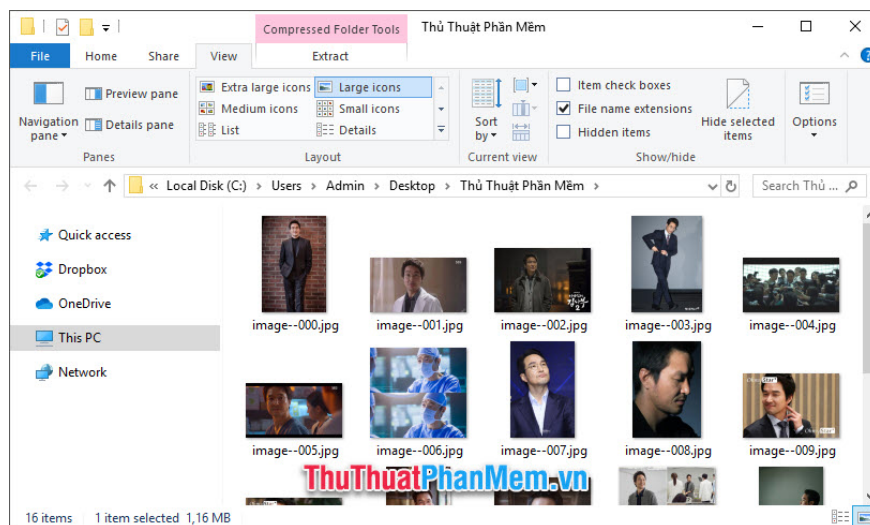

After downloading the compressed image file, open the folder where the file was downloaded.

Perform decompression to get the image files out by right-clicking on the zip file and selecting **Extract Here** .

So you have to get the full image was inserted in that PDF file. All that's left is to insert the removed image into your Word document.

## 2. Get photos by screen capture

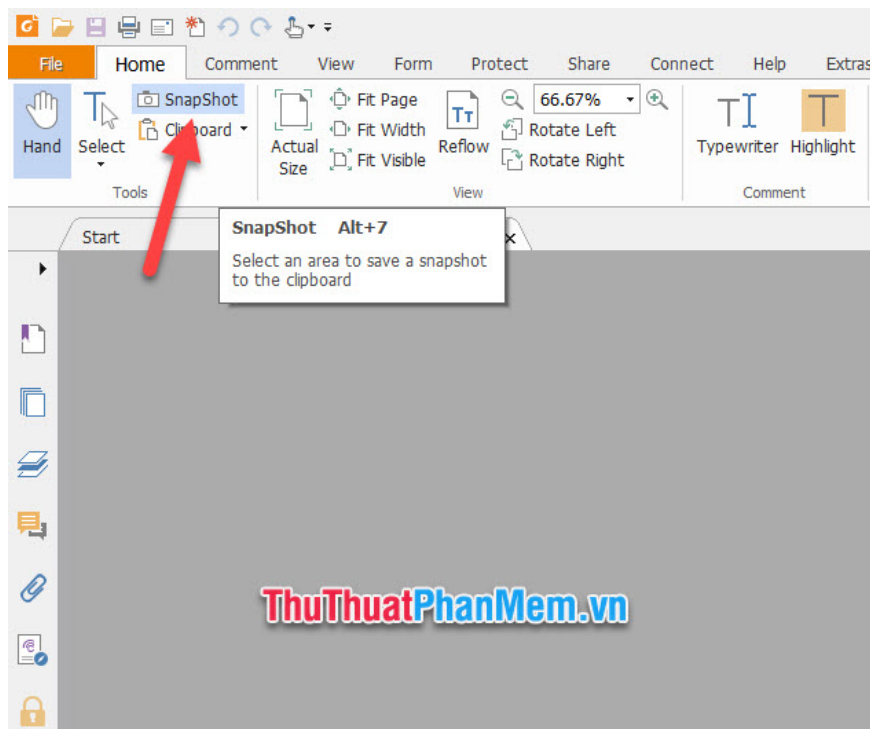

Currently, all PDF readers will be able to capture images in their documents. TipsMake.com will use the popular Foxit Reader software to give instructions.

First you need to open the PDF file to get the image out.

Next, you find the **Snapshot** function in this file interface and with Foxit Reader, it is located in the **Tools** section of the **Home** ribbon on the toolbar.

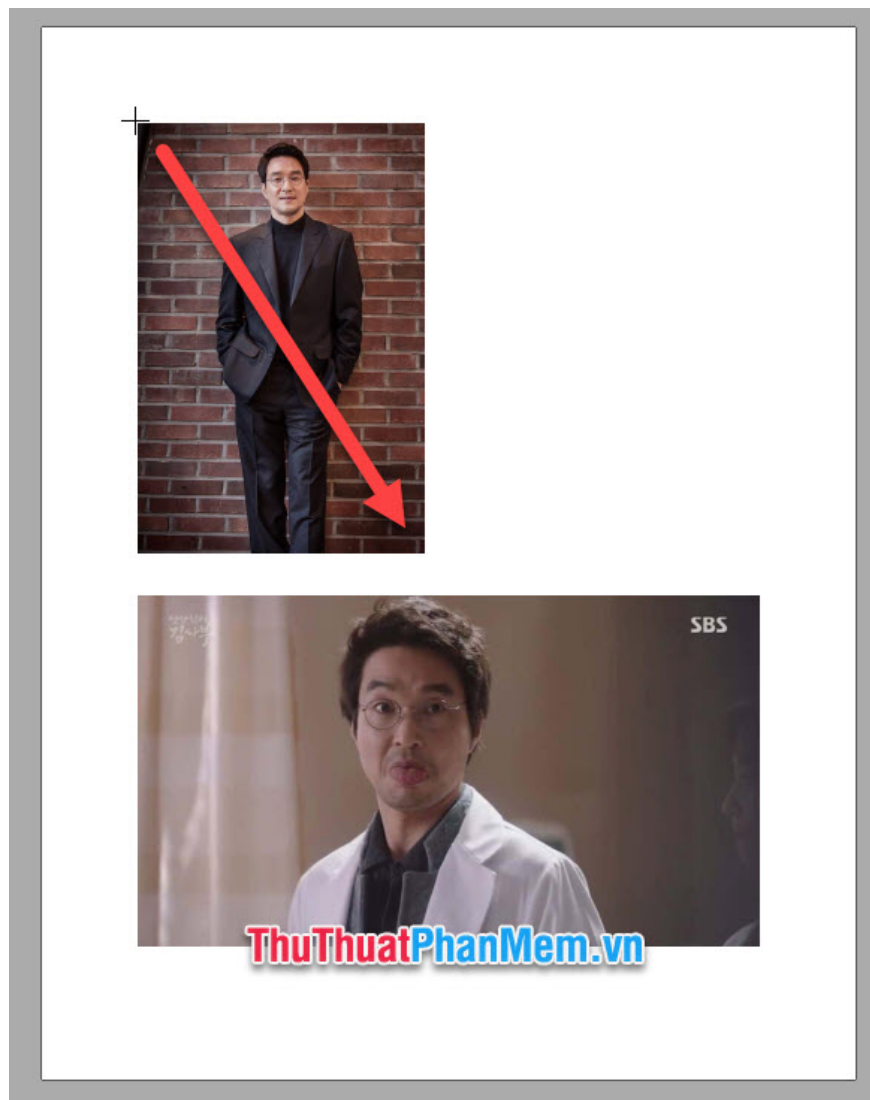

Or you can use the key combination **Alt + 7** to perform the same function.

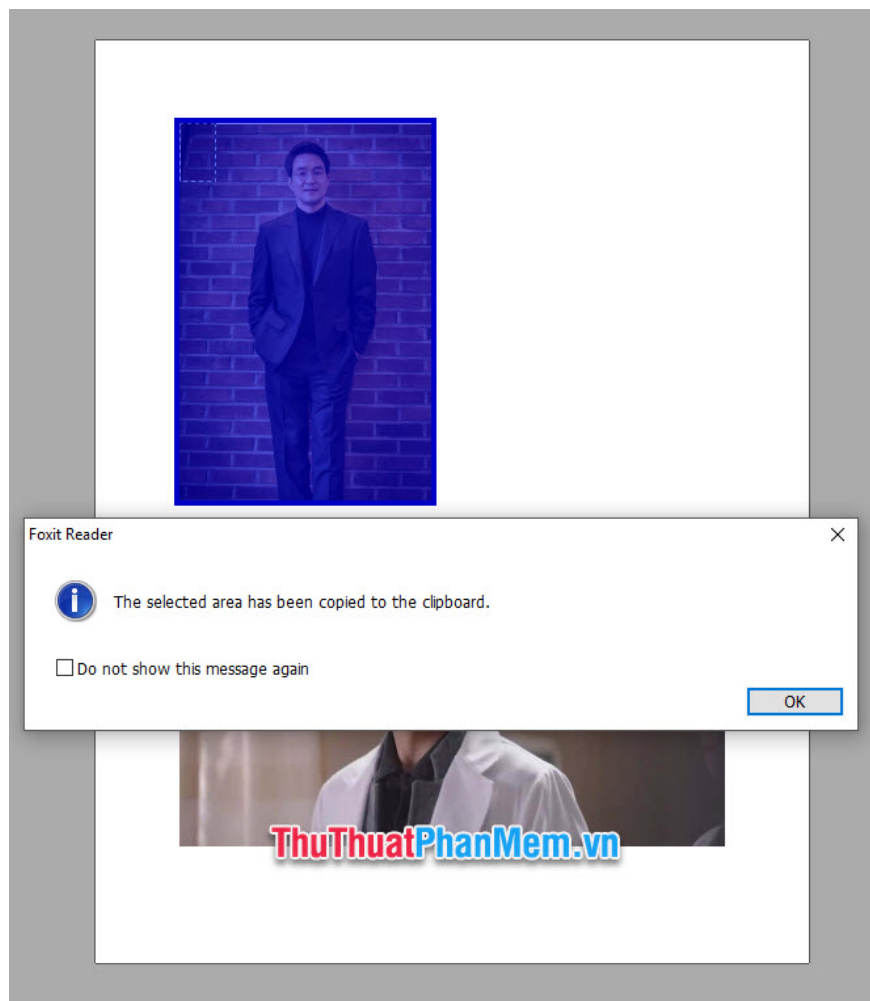

Other PDF reading software will also have **SnapShot** function so you can search with similar names.

After you click on this function, your mouse pointer will turn into a cross.

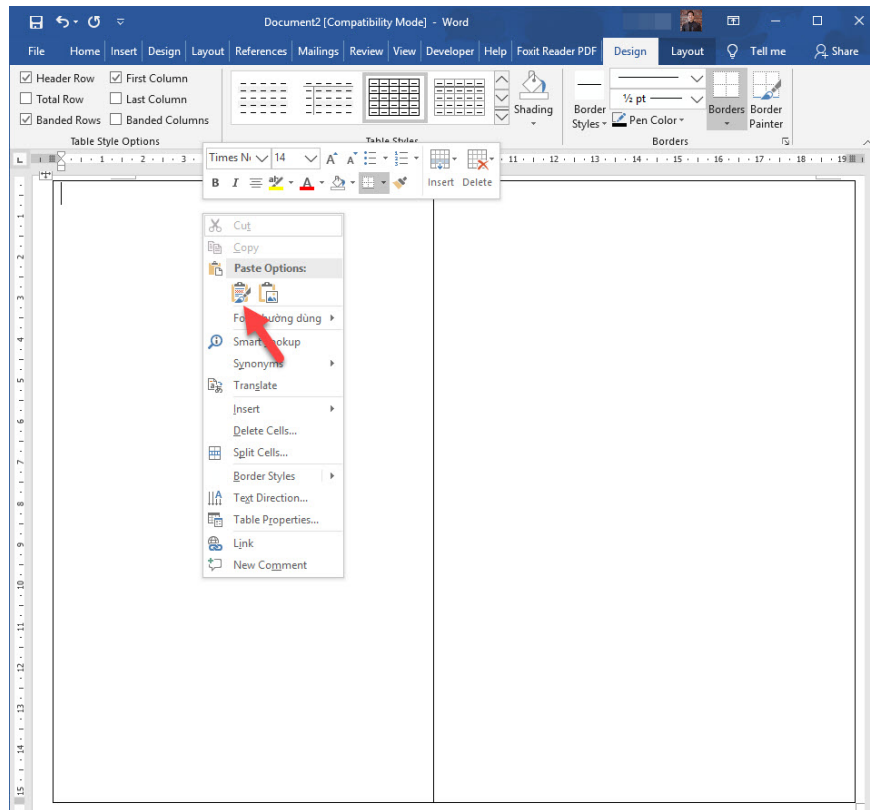

You can click and drag to create a rectangular area around the image.

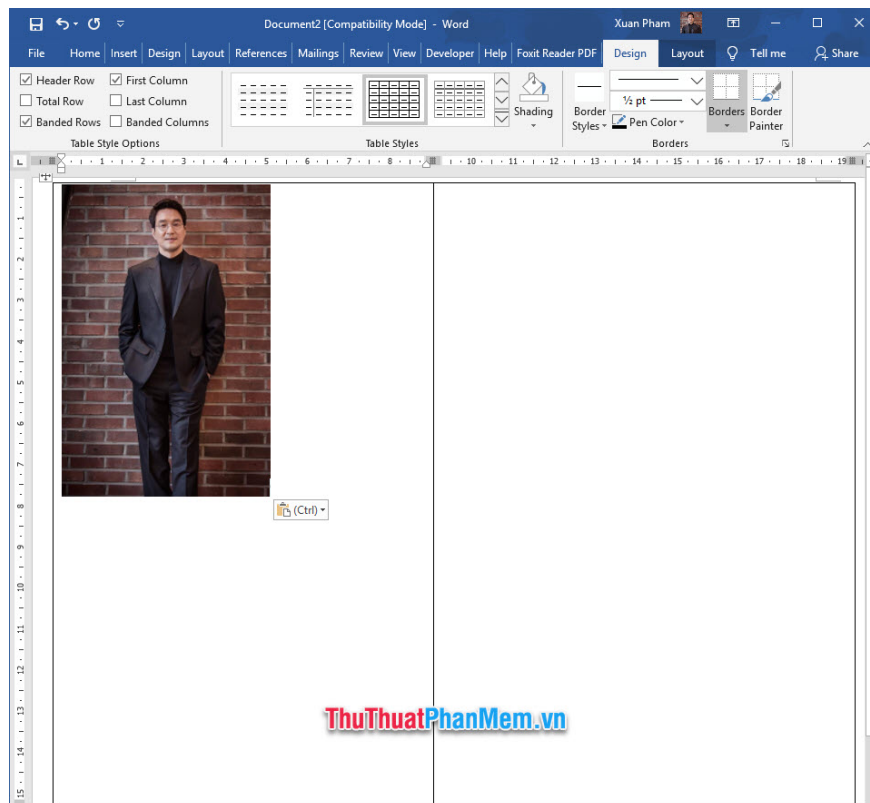

The selected area will be filled with blue, then the blue area will be created as an image saved in your clipboard.

Now, you just need to paste the image in this clipboard into the position you want to insert in Word. You can right-click and select **Paste** or use the Ctrl-V key combination.

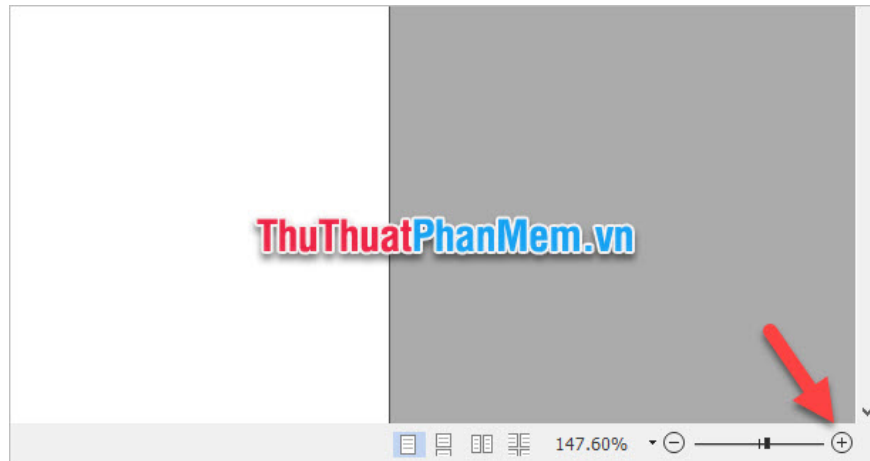

But one thing to note is that photos taken on PDF will have the same pixel size as the image they display on the computer screen.

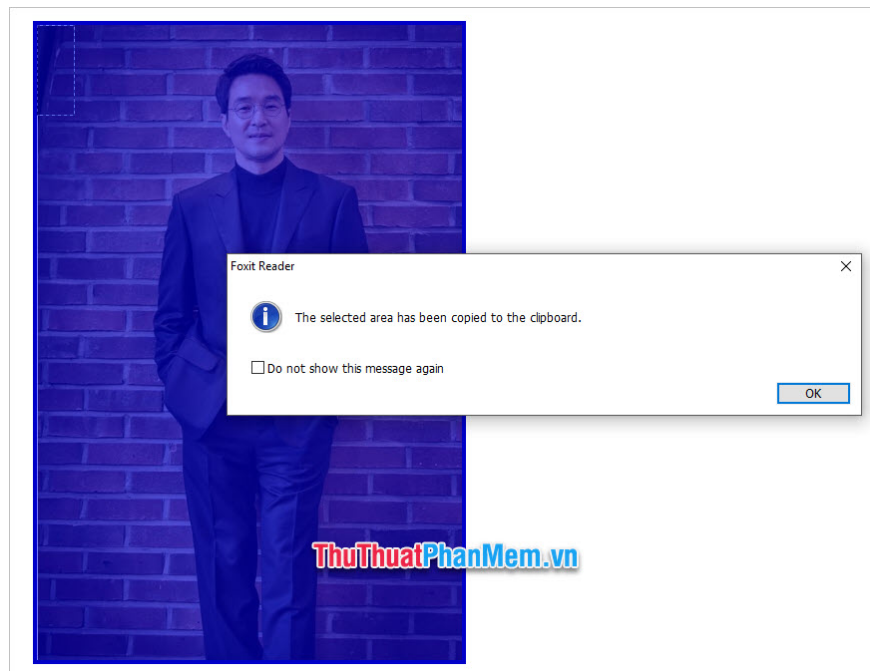

So in order for the image to be larger, you need to enlarge the page so that the image in the page is also displayed larger.

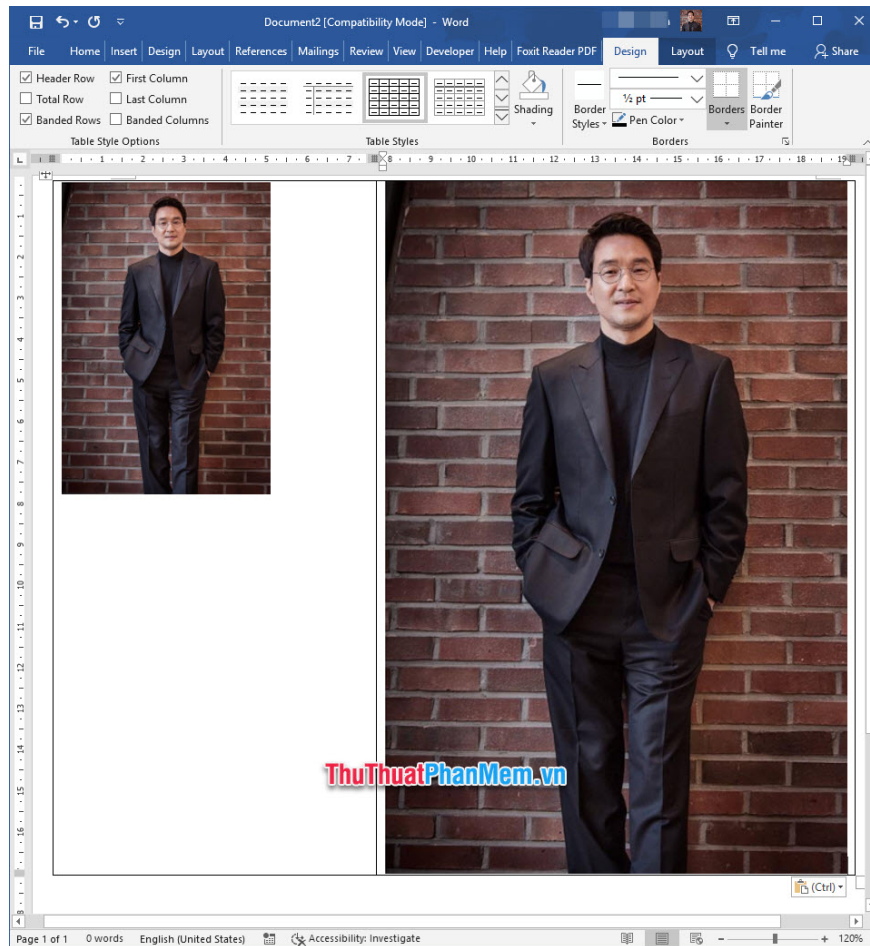

Click on the plus plus icon in the bottom right corner of the software interface to read PDF files.

When you feel that the displayed image is big enough, you will perform **Snapshot again** to take pictures.

Now you have a bigger picture.
