

How to delete files immediately after compressing with Winrar

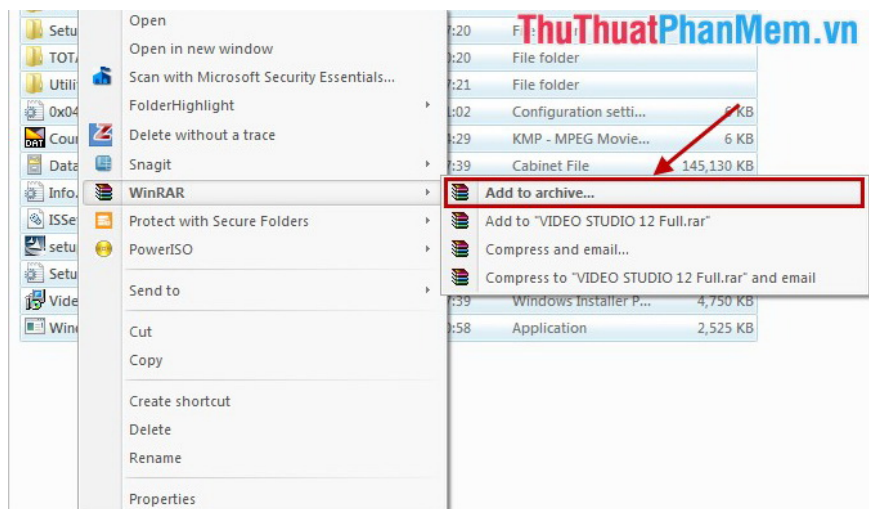

By default, when compressing files with Winrar, the original file will remain the same, so you need to manually delete the original file after compressing the file. To save you more time, Winrar provides the ability to delete files immediately after decompression.

Regularly compress files with Winrar, but you still do not know how to delete the original file immediately after compressing the file.

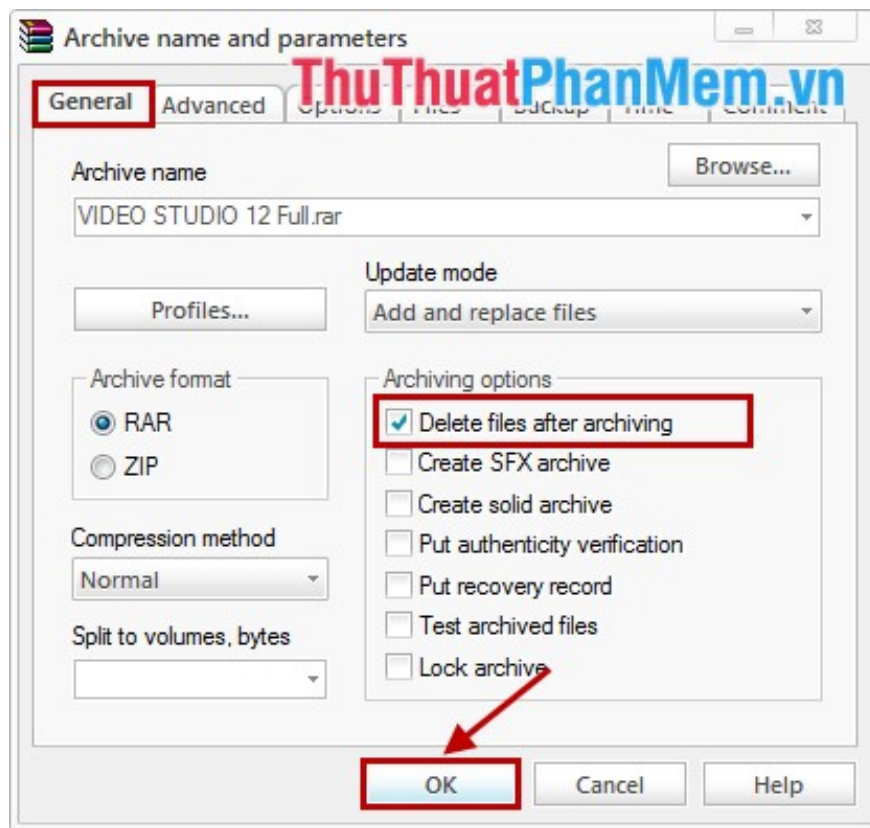

By default, when compressing files with Winrar, the original file will remain the same, so you need to manually delete the original file after compressing the file. To save you more time, Winrar provides the ability to delete files immediately after decompression.

You can follow the simple steps below:

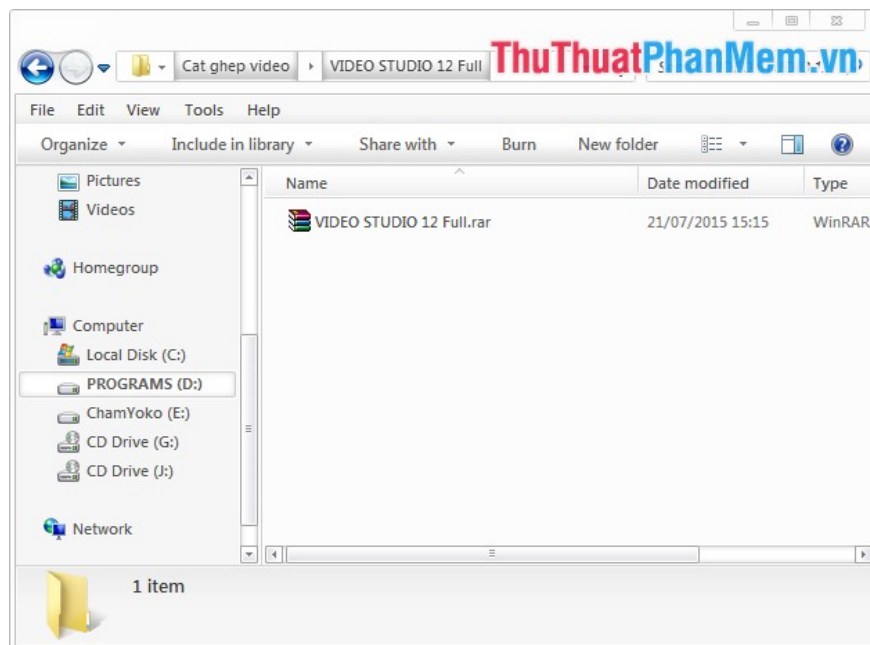

Step 1: Select the files to be compressed, then right-click and select **Add to archive** .

Step 2: The **Archive name and parameters** dialog box appears , on the **General** tab, select the *Delete files after archiving* option in the **Archiving options** section . Then you click **OK** to compress.

After compression is completed, the original file is automatically deleted.

Thus, you only need to add one simple step in the process of compressing the file to automatically delete the file right after compressing with Winrar. You will not lose time to delete the original file after compressing the file. Good luck!
