You want to make yourself or something stand out in an image by clearing the background or blurring the background but don't know how to do it when using Photoshop. In this article, TipsMake.com will help you perform the removal of photo background in Photoshop software quickly and effectively.

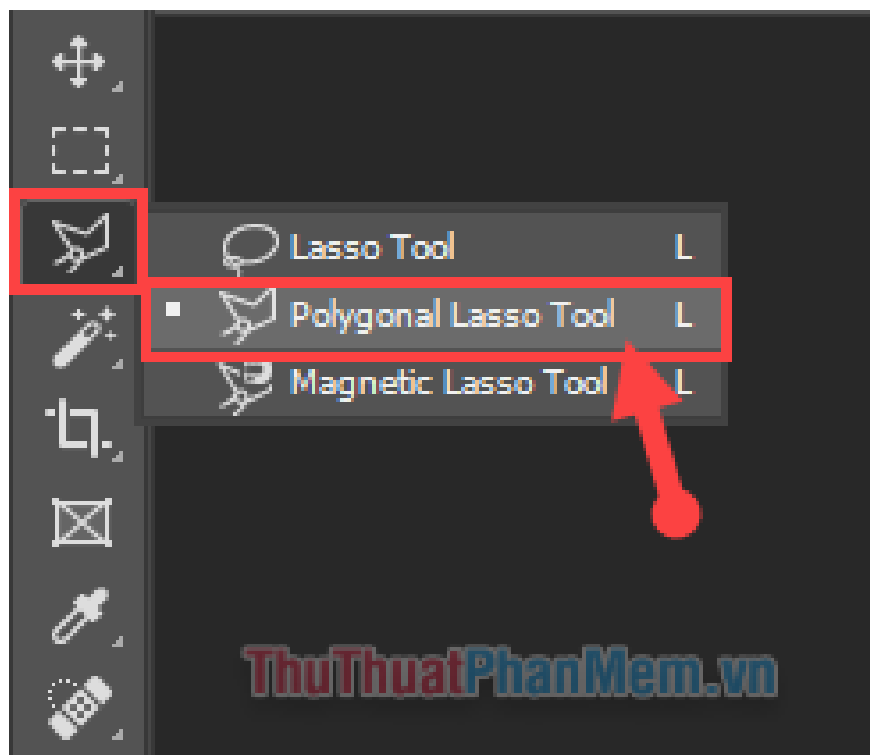

## Method 1. Blur the background

For those of you who want to make yourself stand out from the surroundings by blurring them. We are going to work with Photoshop through the *Polygonal Lasso Tool*

**Step 1** : Open the Photoshop software and open the image you want to delete the font by selecting *File ? Open* or *Ctrl + O*

**Step 2** : On the left toolbar of Photoshop software, select the *Polygonal Lasso Tool*

**Step 3** : Then you make the area of ??the object you want to highlight by drawing lines around the object. You should draw as close to the object, the later the picture will be beautiful.

The keyboard shortcuts you can use in this step are:

- *Atl + mouse scroll* : To zoom in or out of images to help you localize more easily

- **Hold Space** (spacebar): To make moving photos

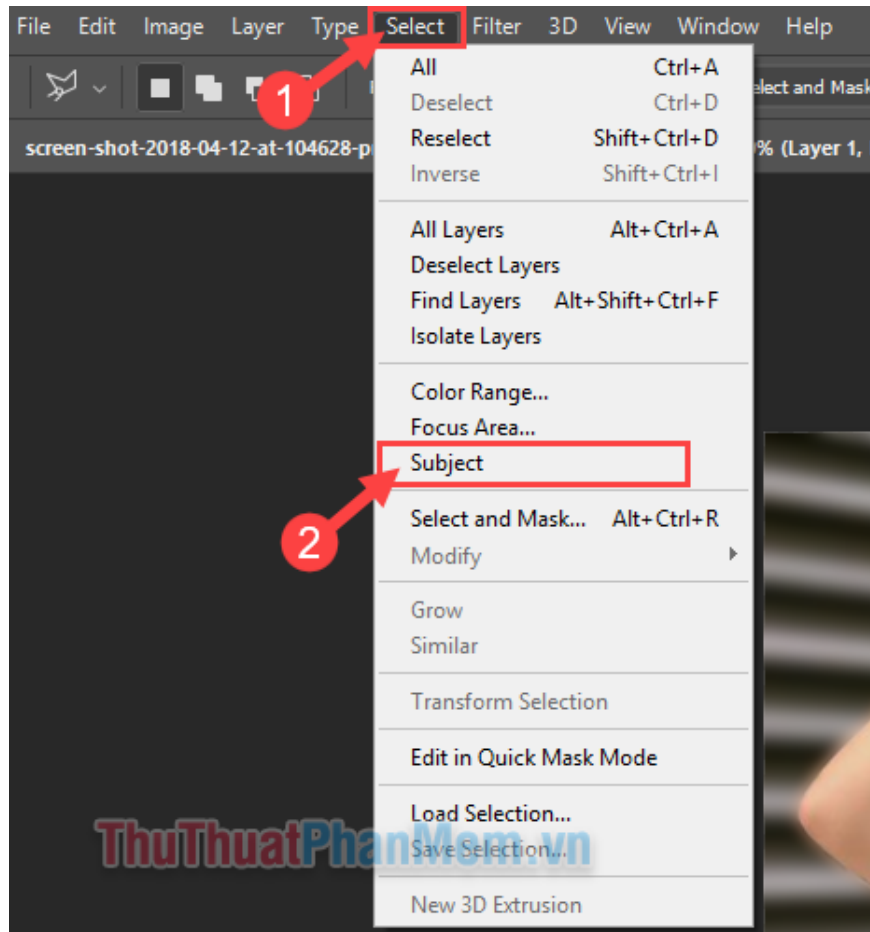

- **Shift + left mouse button** : To be able to localize 2 non-adjacent objects on the image.

After finishing

**Tip** : In the latest version of Photoshop 2019, the software has additional functions that can help users to personalize. By selecting the *Select* tool? select *Subject* .

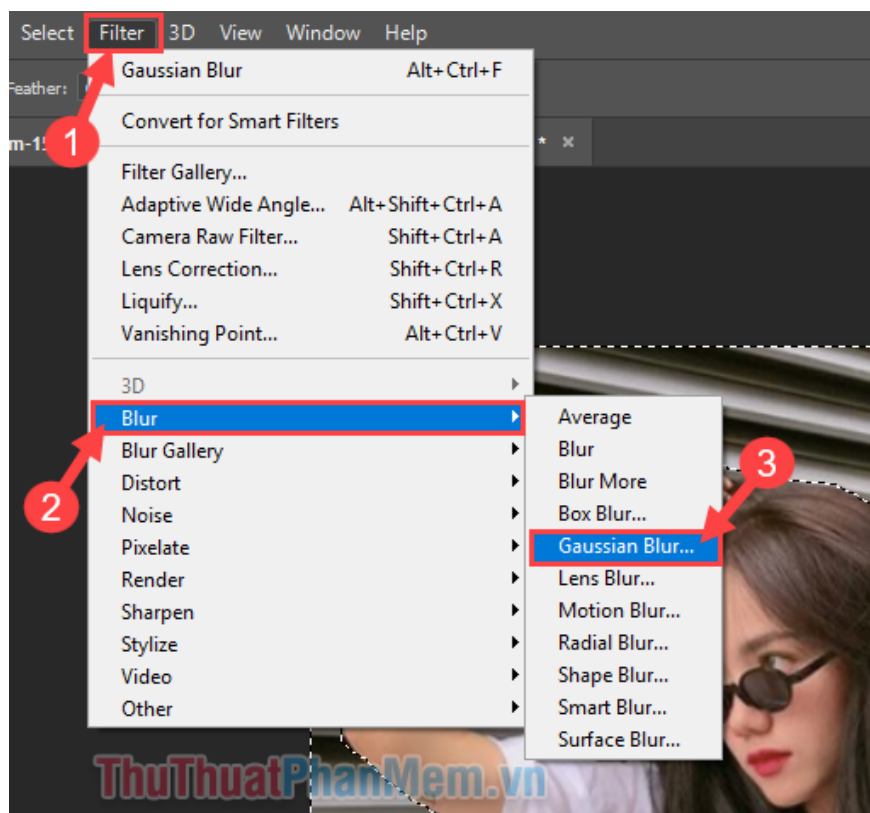

Of course, self-made machines can sometimes cause many images to be zoned exactly as we have them. But for photos with a clean layout, the image color is not too colorful, the Subject is also very effective.

**Step 4** : Now you press *Ctrl + Shift + I* or *Shift + F7* to reverse the area. In other words, it is a delineated background.

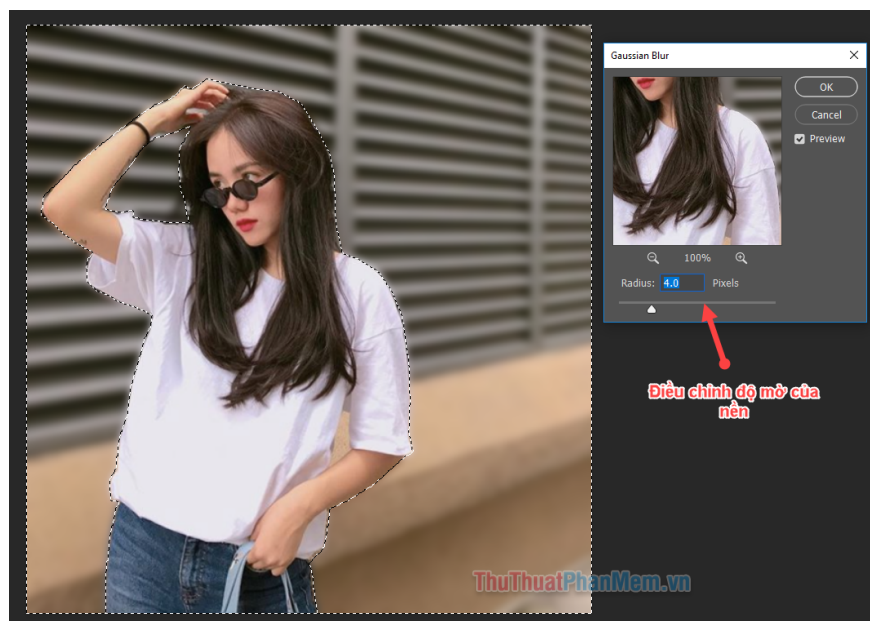

**Step 5 :**

- (1) Select ***Filter*** on the toolbar.
- (2) Select ***Blur***.
- (3) Select ***Gaussian Blur***.

**Step 6** : Here the *Gaussian Blur* appears, you can customize the level of background blur. The higher the *Radius*, the more blurred the background and the more prominent the subject. Then choose **OK** to finish the job.

And this is the result:

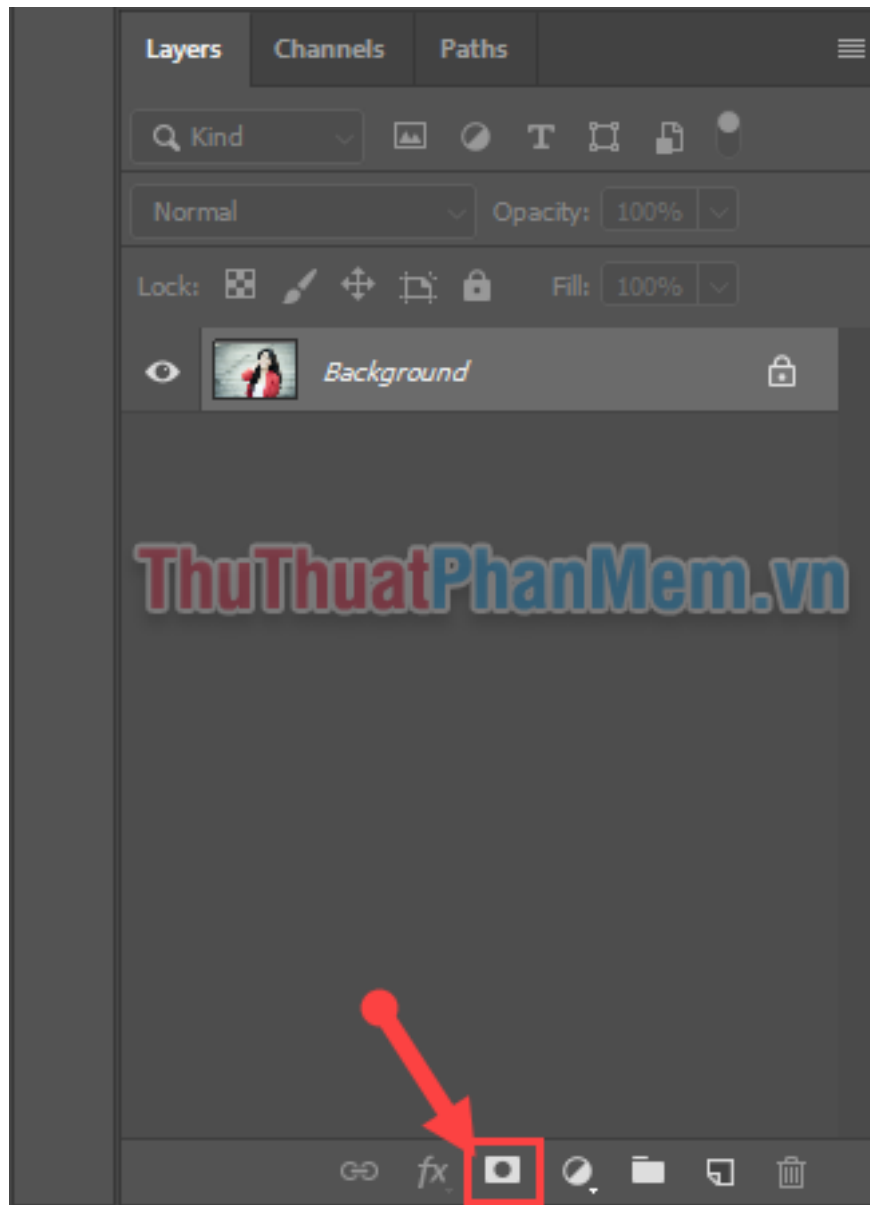

## Method 2: Clear the background

**Step 1** : Similarly, you proceed to localize the object manually or use the Subject tool of the software for Photoshop 2019.

**Step 2** : Next in the tool panel on the right of the software, select *Add a mask* .

And the result is that the background has completely disappeared.

Finally you save the image in PNG format for the best image quality. I wish you successful implementation!
