

How to delete spaces in a table on Word

Spaces can also appear in tables on Word, located below the data that users enter. So how to delete spaces in the table on Word?

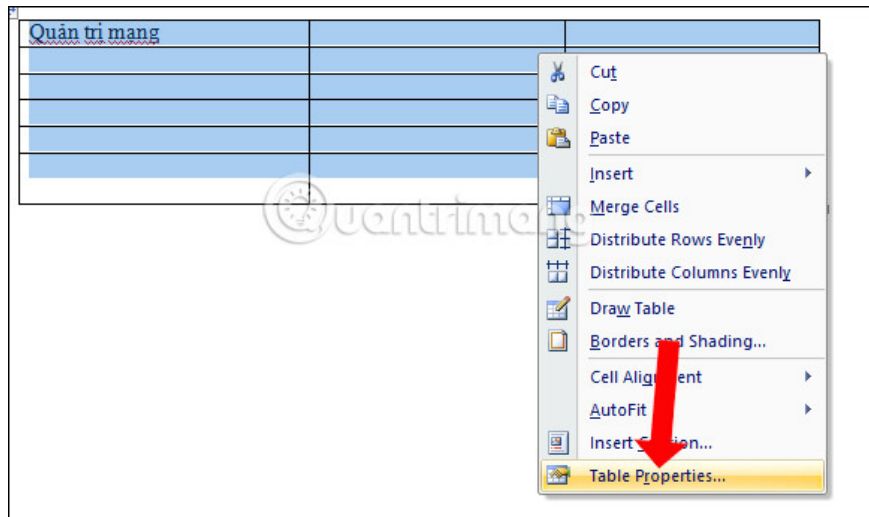

While editing Word content, there will sometimes be white lines down the line without the user knowing. This space appears both in text or in tables on Word. With Word tables, spaces appear right below the data that we just entered into the table. The whitespace in the table will make the document layout aesthetically and without professionalism. The following article will guide you how to delete spaces in Word.

3. Instructions for deleting table paths in Word

Instructions to delete spaces in the Word table

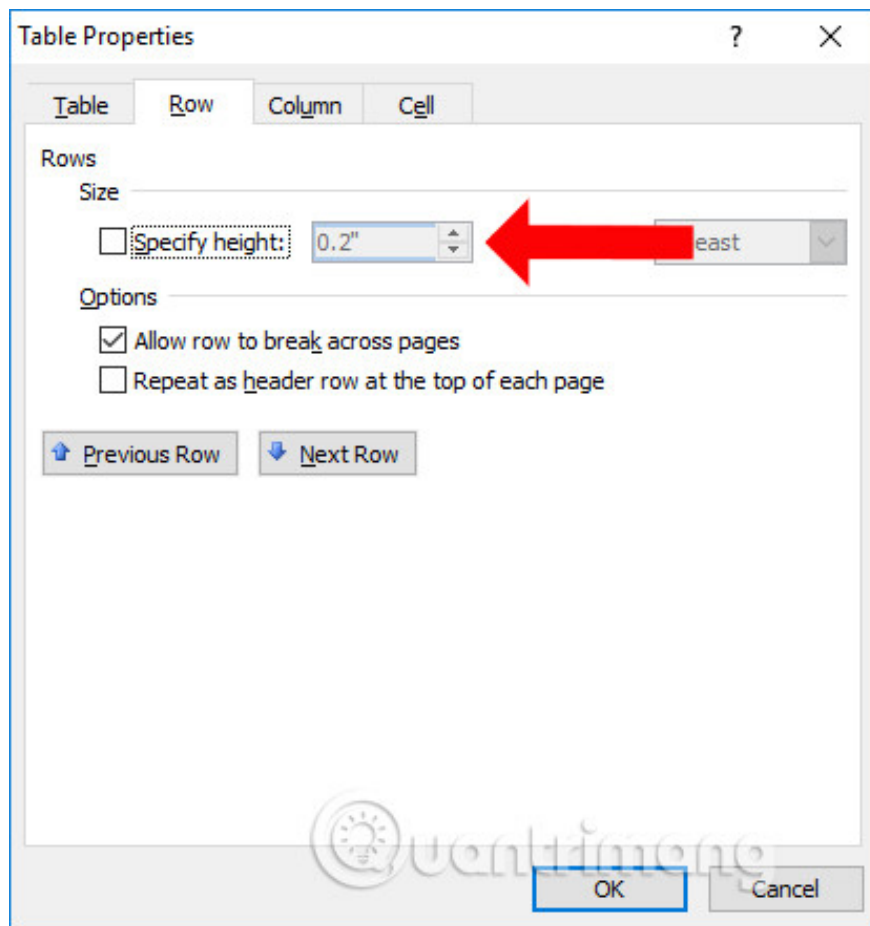

Step 1:

You blacken the table in Word and right-click and select **Table Properties** .

Step 2:

Appearing the custom dialog interface, click **the Row item** . Then in **the Size section** , **leave the checkmark in the Specify height section** and click OK. Thus the space on the Word table has been completely removed.

If there are multiple tables in a Word document, you can use this method to quickly delete whitespace, without deleting them manually, avoiding losing time or having to customize the document layout again.
