

# How to delete the location of photos on iPhone

Deleting photos on your iPhone will increase the security of images when we use them.

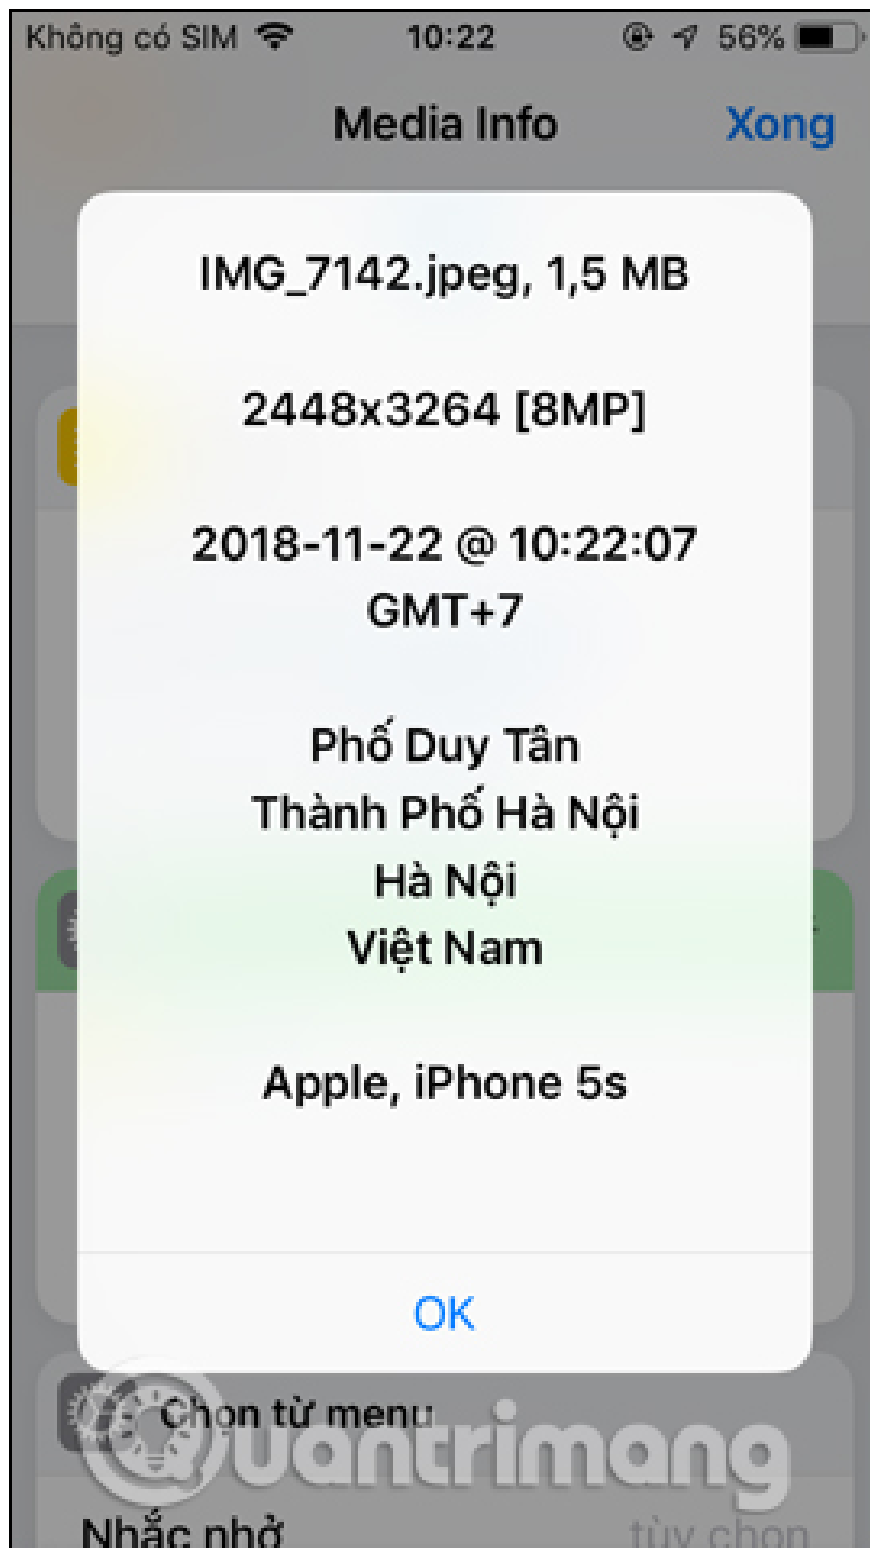

When taking a photo on the iPhone, forget to turn off the location of the iPhone where the photo will accompany your current location. Or some people because of the need to use that needs to have a place in the photo, so this feature is extremely useful.

However, this feature sometimes causes a lot of trouble for users when you accidentally share photos and others know the location of shooting through applications that read metadata. This will partly disclose the private information of the image. To delete the image position, we can use Siri Shortcuts application, with shortcut key Delete Metadata From Photos. The following article will guide the deletion of photos on iPhone.

1. How to download YouTube videos to iPhone phones
2. How to turn off WiFi and Bluetooth completely from the iPhone main screen
3. How to combine photos on iPhone with Siri Shortcuts
