

How to delete the photo background without Photoshop using Remove.gb

Remove.bg will help you separate objects from photos with a few simple steps

In addition to the Photoshop image editing tool, we now have a lot of applications, the software helps users to remove unwanted details on the image, or delete the photo background, delete the image and leave only one. The object you want to merge into another image.

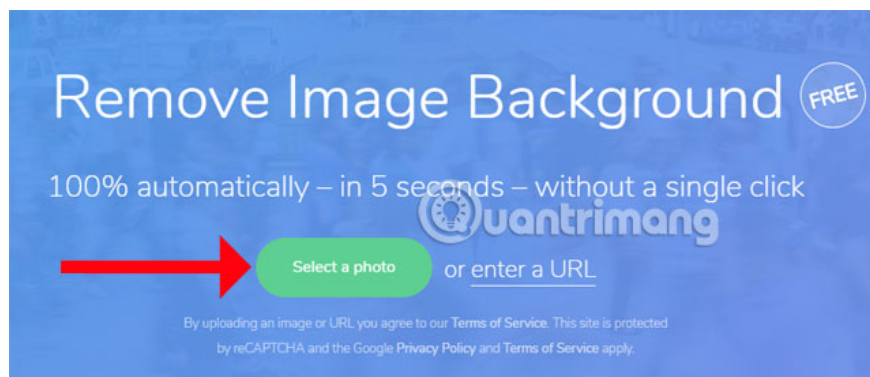

But with Photoshop, we will spend a lot of time to delete the background, then you can ask the help of the web application **Remove.bg**, this is an online tool to help users separate objects wallpaper in the fastest way.

This tool is completely free for users, but it also has some limitations: it is not possible to isolate the background of images without human objects, for example, you cannot separate the logo from the background when using Remove. .bg, in addition, the resolution of the image when separated from the background is only 500x500 pixels. How to separate the object from the image with Remove.bg you can see below this article.

How to delete photo backgrounds without Photoshop using Remove.bg

Step 1: Visit the Remove.bg homepage link, then select **Select a photo** to upload the image from the computer, or click **Enter a URL** to add the image URL to delete the background.

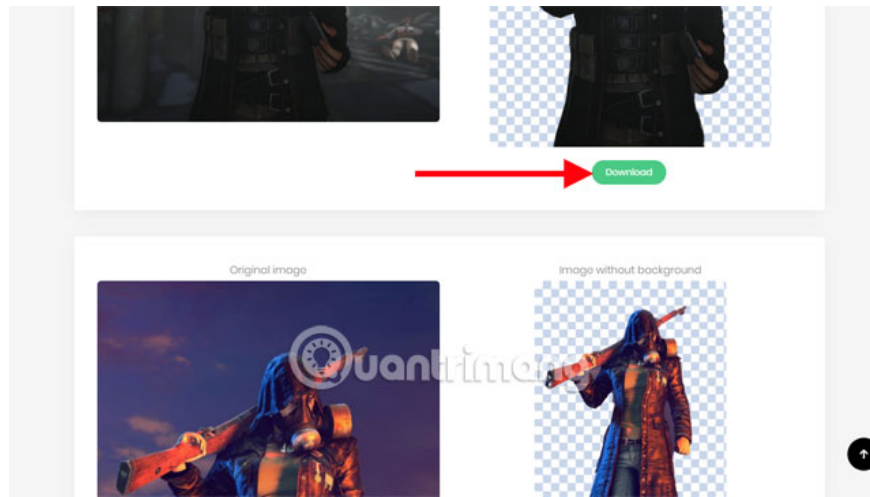

Step 2: Select photos in the folder from the computer, laptop that you want to upload and click **Open**.

Then Remove.bg will automatically delete the photo background and leave only the character on the photo background.

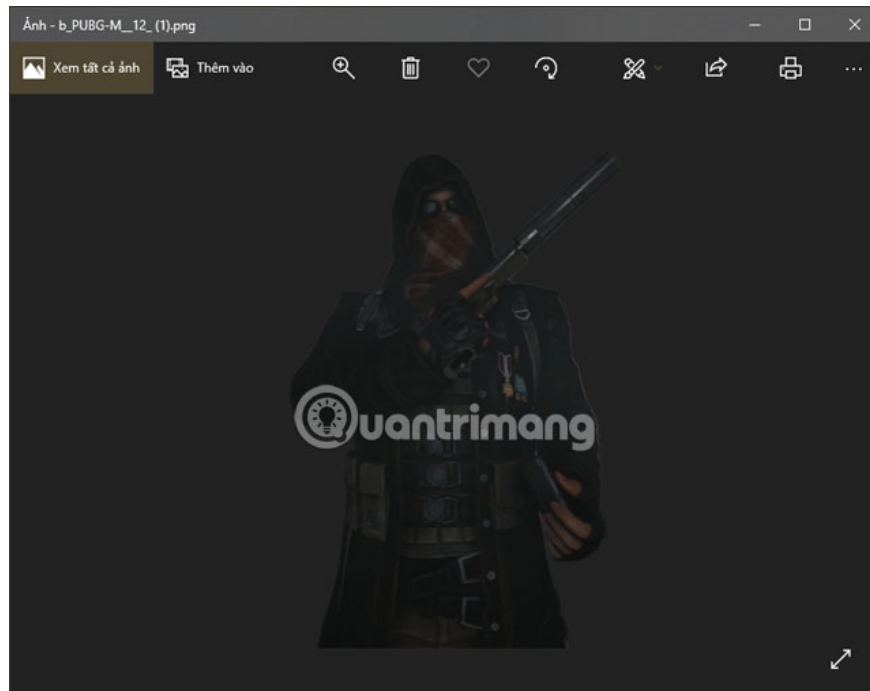

You can upload multiple photos to remove fonts, each time downloading only one image, and then click **Download** to download the removed fonts.

If the image has many objects, you should select objects close together and choose low resolution images to get the best quality.

And this is the image that was downloaded when the background was removed.

That, just a few simple steps, you have removed the character from the image background with Remove.bg already. As mentioned above, Remove.bg is limited in image resolution and only human objects can be separated, but the developer of Remove.bg will fix this situation in the near future, possibly increasing the level. resolution and support to separate more objects from the image.
