

How to delete Windows.old folder on Windows 10 to free up hard drive space

When you upgrade the operating system to Windows 10, the old version of Windows is not deleted but instead changes into the Windows.old folder so you can return to the old version of Windows if needed.

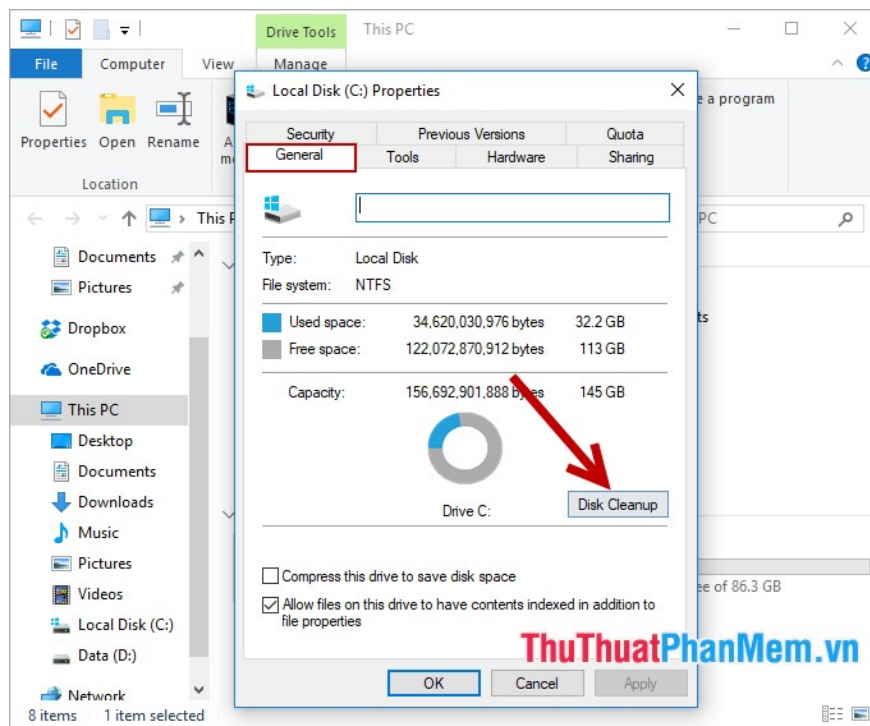

When you upgrade the operating system to Windows 10, the old version of Windows is not deleted but instead changes into the Windows.old folder so you can return to the old version of Windows if needed, but this causes you to lose several GB of data saved. storage. If you do not want to revert to an earlier version, then delete the **Windows.old** folder by following these steps:

Step 1: Normally, the drive that installs the operating system is C drive, so all information or **Windows.old** folder is in C drive. Right-click drive C -> **Properties:**

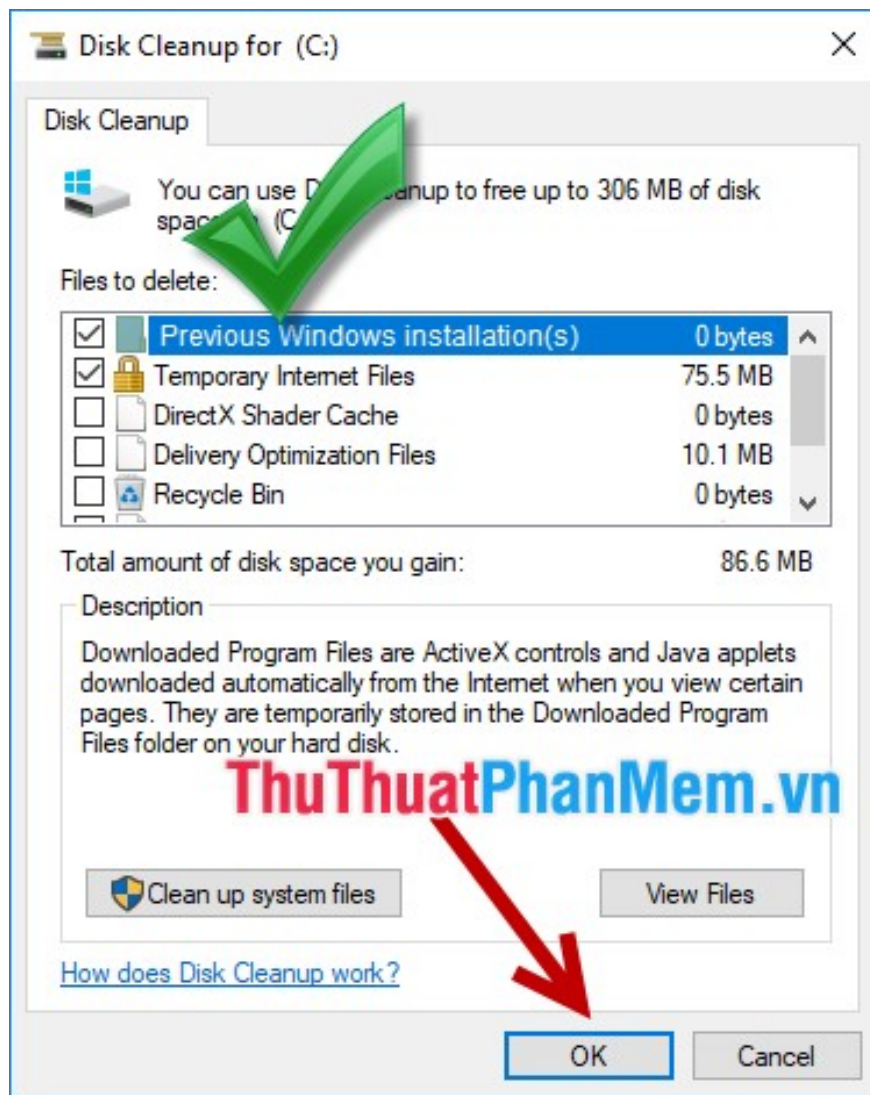

ThuThuatPhanMem.vn

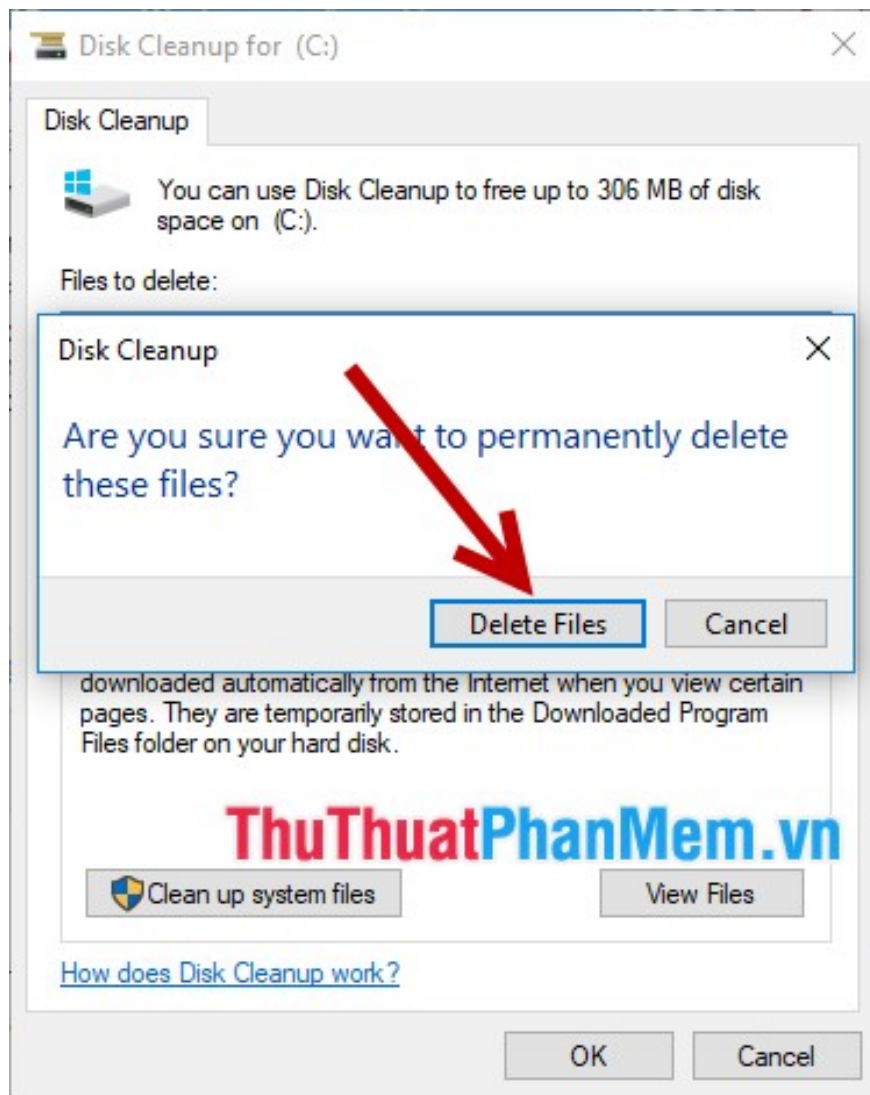

Step 2: A window appears and click **Disk Cleanup:**

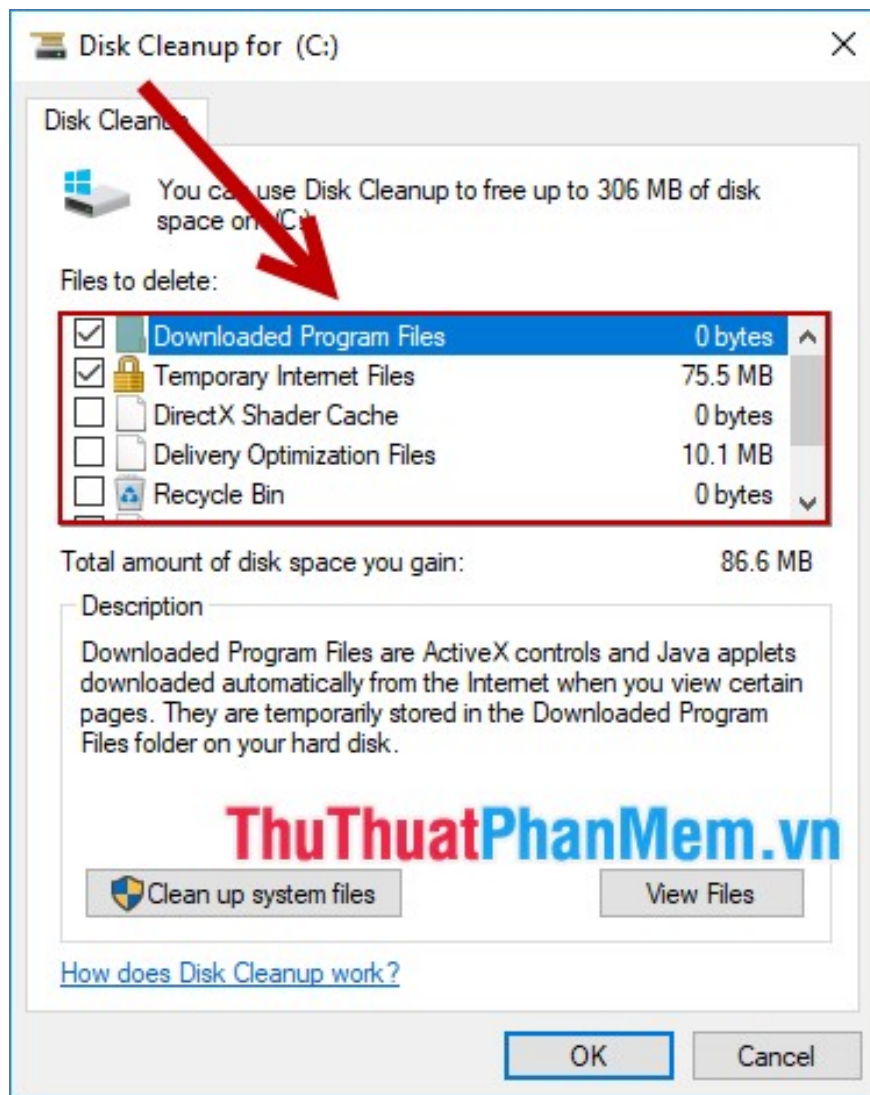

Step 3: Disk Cleanup for C window appears, select the Previous Windows installation (s) -> OK:

Step 4: Click **Delete Files** to confirm the selection of file deletion:

So you have finished the process of deleting the **Windows.old** folder and you will not be able to return to the previous operating system version, unless you reinstall it.

Above is a detailed guide on **how to delete Windows.old folder on Windows 10**. Wish you success!
