

# How to detect hidden camera in hotel room

There are many sophisticated tricks to set up a hidden camera system. Here are some tips for detecting this 'object'.

When entering a room, you should not miss any suspicious items such as decorations, shelves, cabinets, . but need to check immediately.

Surveillance cameras are usually connected and transmitted data over wifi, you can detect hidden cameras by checking the connection in the room. If an IP Camera appears, chances are you are being snapped.

When a flash is passed, the camera will reflect light. So after turning off all the lights in the room, you turn on the flashlight or the LED light to project around the room to detect the hidden camera location.

Another trick of hiding hidden cameras is to use 2-way mirrors. You can put your finger in the mirror, if two fingers 'touch' it could be a two-way mirror.
