

# How to disable Lock Screen lock screen on Windows 8, 10

On Windows 8 and Windows 10, Lock Screen lock screen allows users to select any image as wallpaper as well as display the date and time on the screen when logging out of Windows. However, when logging back into Windows, users are forced to use the mouse to bypass this Lock Screen lock screen.

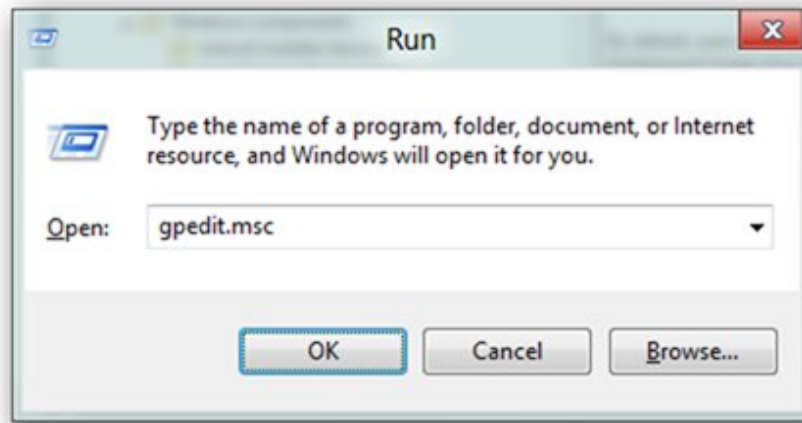

On Windows 8 and Windows 10, Lock Screen lock screen allows users to select any image as wallpaper as well as display the date and time on the screen when logging out of Windows. However, when logging back into Windows, users are forced to use the mouse to bypass this Lock Screen lock screen.

If you want Windows 8 or Windows 10 to display the login interface immediately instead of having to manipulate via the Screen Lock screen, you can disable the Lock Screen lock screen.

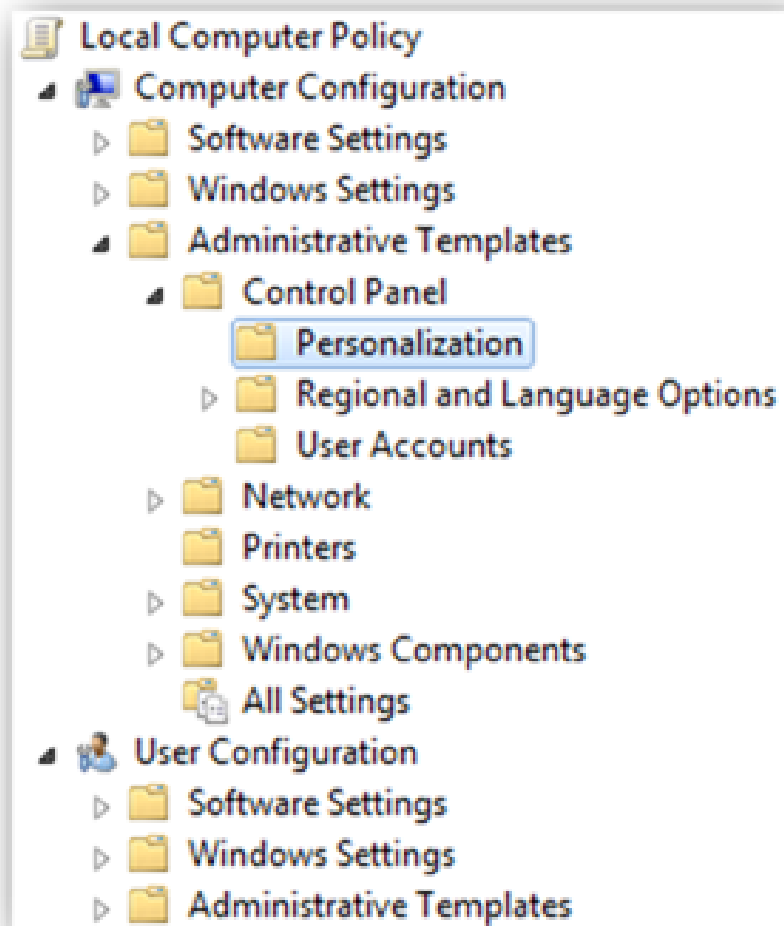

## 1. Disable Lock Screen lock Screen by Local Group Policy Editor

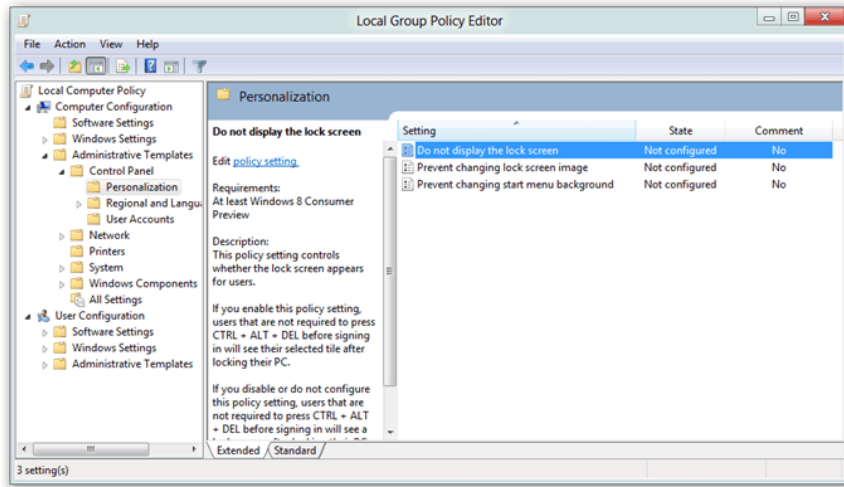

To disable the Lock Screen lock screen on Windows 8 and Windows 10, first open the **Local Group Policy Editor** by pressing the **Win + R** key combination to open the Run dialog box, then enter **gpedit.msc** in the Run dialog box press **Enter** .

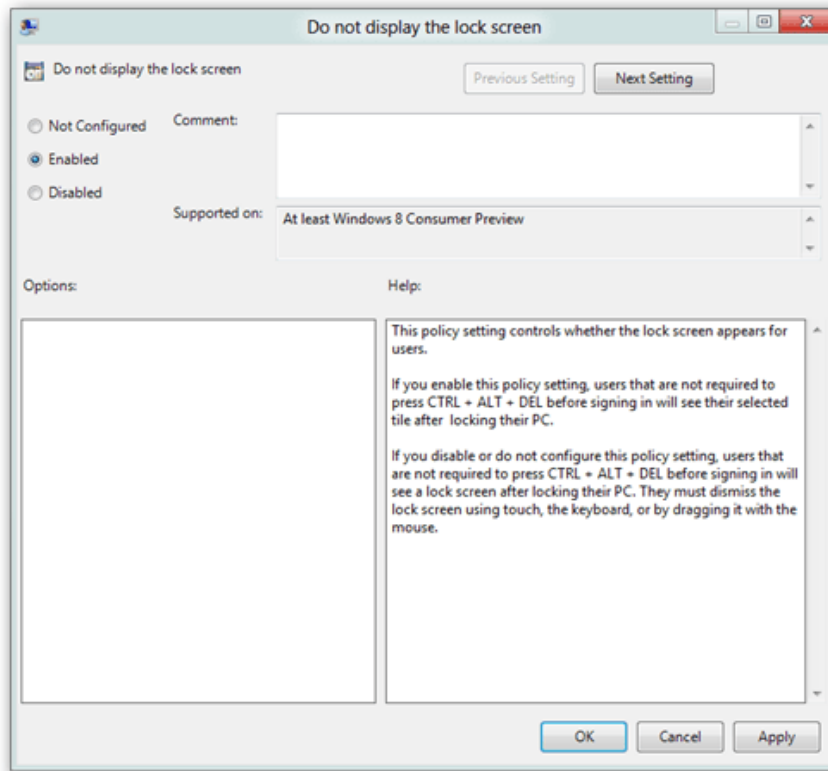

At this point, on the screen that displays the interface of the Local Group Policy Editor folder in the left pane, you will find the path to **Computer Configuration Administrative Templates Control Panel Personalization**.

On the interface to the right of Personalization, double-click the option **Do not display the lock screen** .

Then check the **Enable** item .

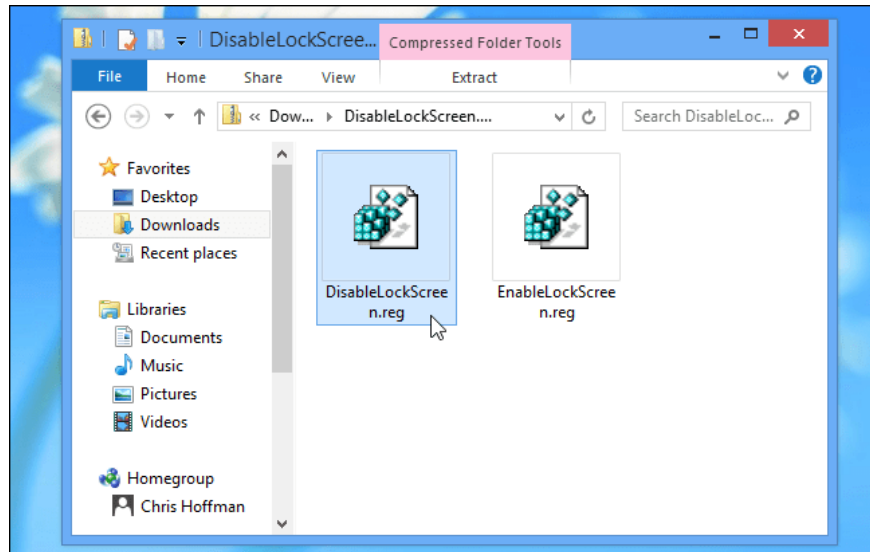

Finally, click **OK** and restart the computer to set it up.

## 2. Disable quick lock screen Lock Screen

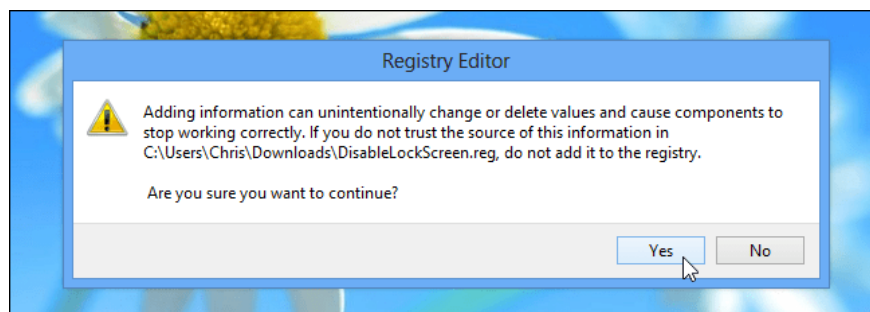

If you don't want to edit the Registry manually, you can download the pre-edited Registry file to your computer and install it.

Download the available Registry file to your computer here.

After you have downloaded the pre-edited Registry file, proceed to unzip the Zip file, now you will see two files, **DisaleLockScreen.reg** and **EnableLockScreen.reg**. Your task is to double click on the **DisaleLockScreen.reg** file to disable the Lock Screen lock screen.

Once done, you do not need to restart your computer.

If you want to re-enable Lock Screen lock screen, double click on **EnableLockScreen.reg** file.

### 3. Edit the Registry manually

If you want to edit the Registry manually, follow the steps below:

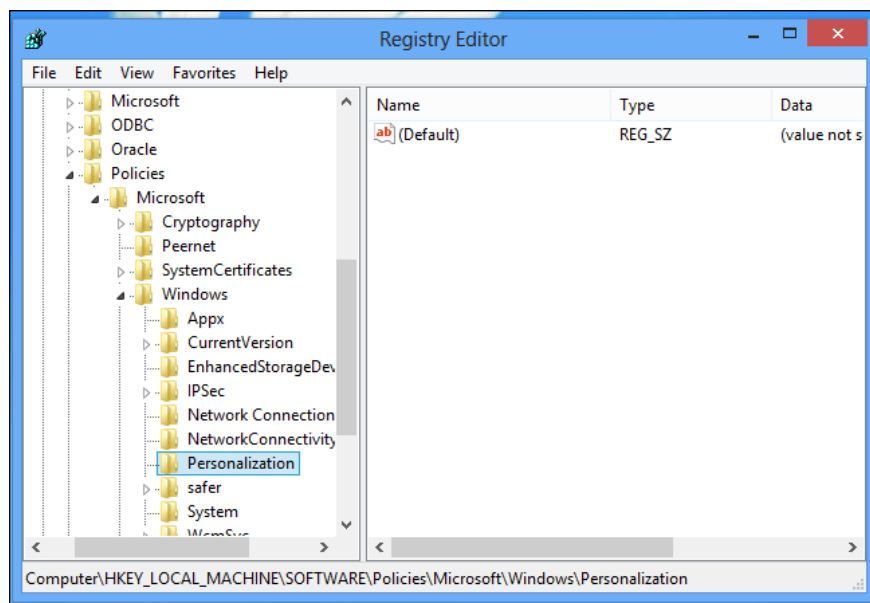

First open the Registry Editor by pressing the Windows key, then enter **regedit** in the Search box and press Enter. If you use Windows 10, simply open the Start Menu, then enter **regedit** there and press Enter to open the Registry Editor window.

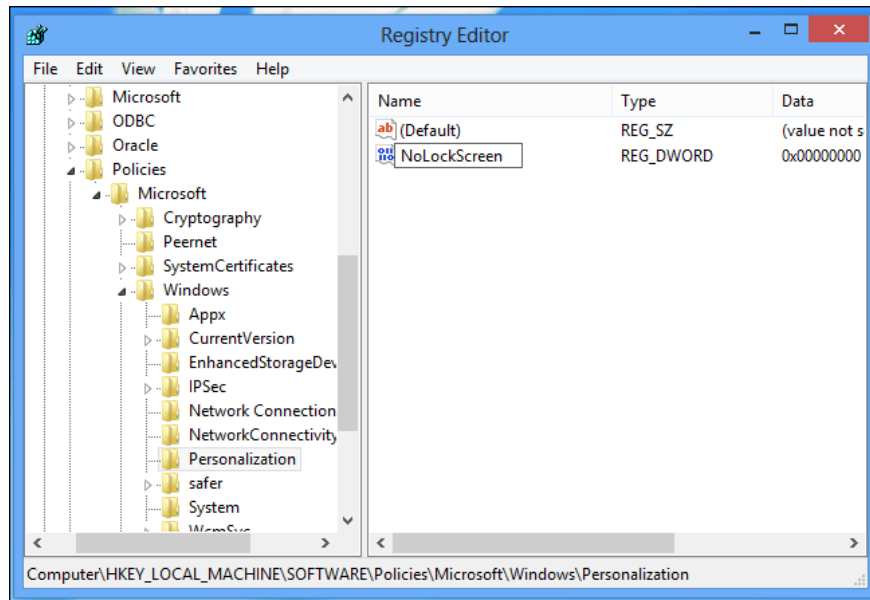

On the Registry Editor window, navigate to the key:

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\Windows\Personalization

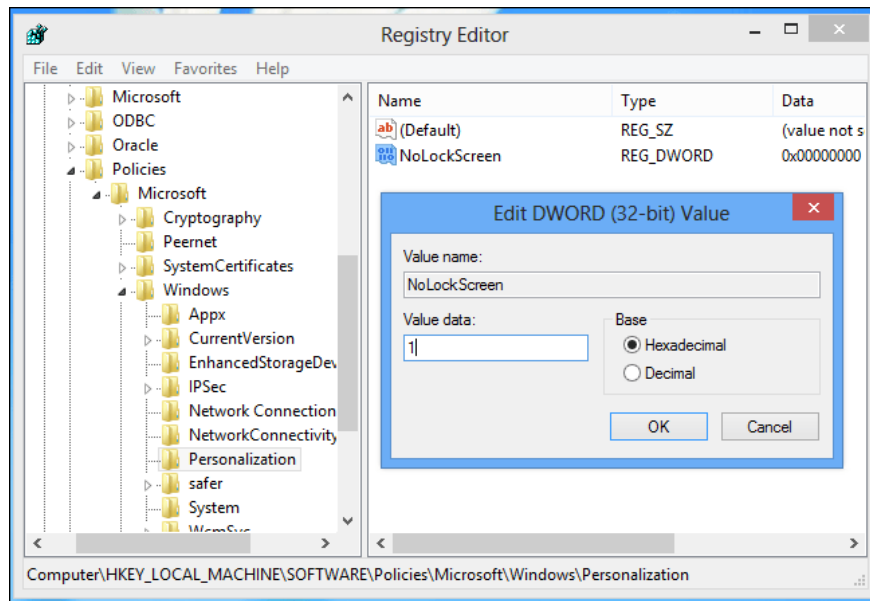

If you can't find the Personalization key, right-click the **Windows** key above, select **New** and create a new key called Personalization.

Right-click on the right frame and create a new DWORD value, name it **NoLockScreen** .

Next, double-click on the value **NoLockScreen** that you just created, at the **Value Data** frame you set the value to **1**.

Finally close the Registry Editor window and you do not need to restart your computer.

If you want to re-activate the Lock Screen lock screen, follow the same steps and set the value in the Value Data frame to **0**.
