

How to distinguish real iPhone X, fake company and Taiwan

How to distinguish the real iPhone X and what is fake (Taiwanese goods). Let's find out through the following article?

Last 3/11/2017 Apple has officially launched the new product line, attracting a lot of users interested and expect it to be iPhone X. After a time of launch, this product has been fast quickly she made fake, fake Chinese produced, the designs of these fake products are so sophisticated that they are just like the real ones, very difficult to identify. So how to distinguish the real iPhone X and what is fake. The following article will guide you to some characteristics to easily identify to avoid buying fake, poor quality fake goods, affecting the use process.

1. About the box of iPhone X

If you just take a quick look at the box of the iPhone X or the images on the net, you will surely be unable to distinguish: Where is the box of the real iPhone X and the box of the fake iPhone X.

Of course the box does not say much, but if you look a little bit and try it on your hand, you will see that the fake iPhone X case will have less paper material, not as smooth as the real iPhone X case.

If you don't put these two boxes side by side for comparison, it's hard to distinguish. But when put together, I see: In terms of size, the iPhone X box is really thicker, a little bigger than the box of iPhone X fake.

On the back of the case, the product information printed on the back of the box of the real iPhone X (right) will have a light gray color that gives the viewer a sense of harmony and especially the information will be printed by many different languages. On the fake iPhone X box (on the left), in the introduction information on the box is printed only in English and in black ink, is a poor quality ink, so it often stains water.

In addition to the box, you can also distinguish the accessory tray section, As shown above, we will see the real iPhone X accessory tray (right) with white color to match the appearance of the box, still in iPhone side X fake (left) this color will be bright white look quite harsh look.

2. About accessories

Accessories inside the box of the real iPhone X include manuals, charging tubers (depending on the source, there will be 2-pin, 3-pin charging bulbs), headphones, head switch from lightning to standard headphone jack 3.5 mm and SIM stick. All these accessories are arranged in an orderly, orderly manner.

In contrast, inside the accessory box of the fake iPhone X, very sketchy accessories include manual books, rechargeable bulbs and standard charging cables lightning. Arranged normally, neither neat nor beautiful.

3. About machine design and software

As mentioned above, fake products are made very sophisticated. The real iPhone X and fake iPhone X are 99% the same, but compared to the weight, the iPhone X is heavy and has a slightly more compact grip than the "reluctant twin brother".

Screen defective parts iPhone X

iPhone X is a new product of Apple, so the design of this device is also improved compared to its predecessors. With this new design, the real iPhone X has a big screen and a unique screen. As for the fake iPhone, it is also designed quite similarly, so it only has a thick upper border and the screen is only squeezed to look extremely rough, lack of sophistication.

In terms of finishing on the real iPhone X (right) very well, every detail from the edge to the screen is crafted meticulously, seamlessly together, holding hands and bringing a comfortable grip. On the fake iPhone X, the quality is quite poor, the edges are not seamless with each other, making the hand feel uncomfortable when holding.

Our Apple products are currently running on iOS version 11.0.1, and counterfeit products are no less competitive, as the machine's customized Android rom has also been simulated with similar iOS version information. .

Home button key on the device

As with the screen defect, the Home touch key on the device screen of the two devices is also different.

With the real iPhone X device (on the right hand side), the top and bottom edges are designed very nice and seamless and not as thick as the fake iPhone next to it.

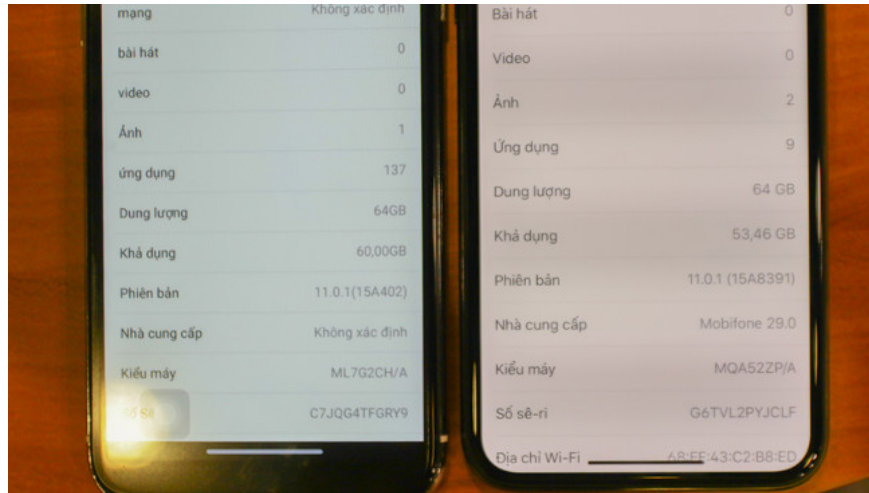

Replacing the Home button on iPhone X helps us to have a larger screen, and we have a completely new Home bar. However, on the fake iPhone X (on the right) this Home bar will make the screen appear a black border that looks extremely bad.

4. Try the experience you will find the difference

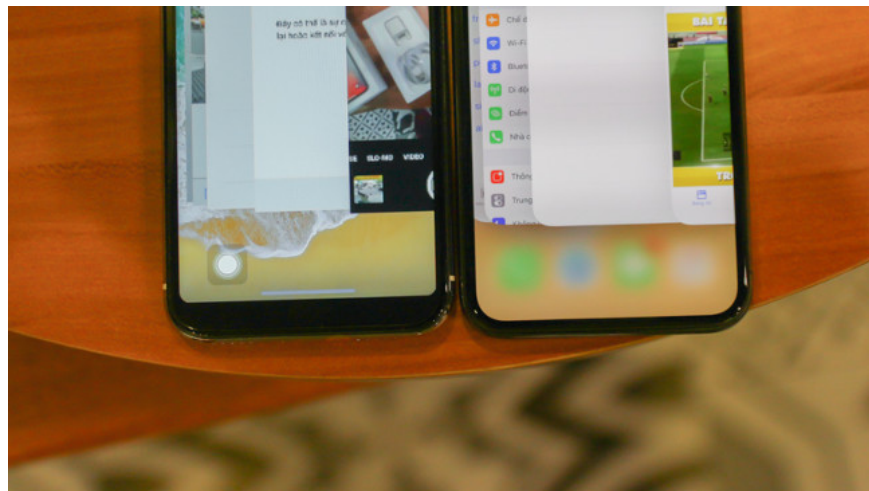

In addition to the above factors, the actual use experience is a way to help you distinguish between the real product and the fake product.

The task manager

As the image above we have seen the difference when we use the task manager on iPhone X. With the real iPhone X device (on the right hand side) we will see the outline of the tasks are rounded.

App Store app store

For real iPhones with application window boxes rounded at the corners, and on fake products, they are not curled.

Another point to note is that all fake and fake iPhones run custom ROMs based on the Android platform, so when you access the Appstore, the device will redirect to Google's Play CH page.

So we have just come together to learn how to distinguish the real iPhone X, fake, Apple and Taiwan products with the most detailed signs and differences. Hopefully, through this article, you will be able to easily identify the real iPhone X device to be able to choose to avoid confusion and cheap but cost money to buy a poor quality product. In addition, you also need to know the genuine iPhone or the body to avoid buying the wrong used or incorrect manufacturer's origin, to distinguish genuine and portable iPhone, you also have many real ways. show different.

In addition, you can try to distinguish the real iPhone X, fake through the unique features on this device such as using True Tone or setting Face ID on iPhone X, especially the security feature set Face ID on iPhone X is one of the features that many people love to enhance their device information protection.
