

How to distinguish the MacBook Air 2013 visually

MacBook Air 2013 has a very similar frame design to the 2012 version. The main upgrade is inside the chassis, the new trendy laptop owns a fourth-generation Core i5 processor from Intel.

MacBook Air 2013 has a very similar frame design to the 2012 version. The main upgrade is inside the chassis, the new trendy laptop has Intel's fourth-generation Core i5 processor, integrated graphics. Better matching and faster WiFi. So how to distinguish it with the naked eye?

There is a new feature that is rarely mentioned as a **dual microphone system**. It will give better sound when making calls and canceling ambient noise, similar to what is being offered on many existing new smartphones.

MacBook Air 2013

MacBook Air 2012

According to *Cnet*, this feature also helps to detect the **new MacBook Air** without checking the system parameters on OS X. If you suspect that the MacBook Air version you are about to purchase is your 2012 or 2013 version. just **check the laptop's left flank**.

If you see **two small micro holes** , that's **MacBook Air 2013** . It may not be the only difference between the looks of the two generations of the MacBook Air but the most obvious sign we can see at the present time.
