

## How to distinguish true white iPhone 4 - fake

Besides the original white iPhone 4, the market has appeared products to change the shell to raise the price that the merchants or so called 'build'. Experts gave some notes to distinguish true-fake.

**Besides the original white iPhone 4, the market has appeared products to change the shell to raise the price that the merchants or so called "build". Experts gave some notes to distinguish true-fake.**

With the selling price of only 14.5 million VND / unit of 16GB international version, it seems that iPhone 4 has bottomed out because the buying price in markets outside Vietnam is also close to this level.

This makes the people quite comfortable trading and must calculate the door to sell goods to profit instead of moderating today, thereby generating countless forms of "ghost" users.

In the middle of April, the market recorded the appearance of AT&T iPhone 4 versions but was advertised as an international version and offered for sale at the same price.

These devices are in fact iPhone 4 locked in a deep network, unable to be unlocked by software, but are forced to use SIM Gevey (a type of fool SIM) to be able to listen to SIM calls of domestic operators.

However, with some hacker tricks, these machines are already open and available using regular SIM cards.

But according to experts, AT & T's iPhone 4 capability to open the network with code is very low, especially the hacked code. Even if the network is then open, it is not possible to update the new firmware because it is very easy to get locked back by Apple.

According to experts, in order to avoid buying false iPhone 4 'fake', users need to pay attention to the following details:

The casing must be sharp, the white iPhone 4 will be white. Unable to accept the peeling of plastic, the print on the back of the box must be clear, not to enter. Important parts like Serial, IMEI have no sign of erasing.

The code behind the body must be MC604B / A if the international version is white and MC603B / A if it is the black version. Serial information is very important, white iPhone 4 shipments only start to market in April, so the delivery date is only about February 2011.

The first batch of iPhone 4 will **MUST** have a serial similar to the following: 881191X0DZZ. You skip the number 88, and only care from the 11 behind, that is the year of production 2011 and the 9th is the 9th week of the year.

It means that the shipment of white iPhone 4 will only be shipped at the earliest in March this year. If the previous display serial is for example 880381X0DZZ, about 38 weeks of 2010, make sure this is a black row instead of the cover.

As soon as you buy the device, you have to force the employee to plug in the computer to connect via iTunes, the interface after iTunes activation must recognize that this is the correct iPhone 4 as well as the IMEI and serial parameters that match the box or on the phone (*check IMEI by dialing \* # 06 #*).
