The windows on Windows 11 are also slightly rounded with 4 corners, no longer as square as previous versions. File Explorer and Notification Center (notification center) have only slightly changed a few icons.

In addition, Microsoft also integrates a handy screen capture feature when users zoom in on the image.

When you click on the zoom in / out icon on the browser, you will see a few options to change the display style. Snap feature was first introduced on Windows 7, then 'disappeared' on Windows 10 and now reappears on Windows 11 with more improvements.

Basically, Windows 11 is like Windows 10 with a slightly changed interface, apart from the Taskbar and Start menu, it's hard to find any other difference.

Windows 11 Dev (version 21996.1) is currently still being tested, so errors will inevitably arise during use. To be on the safe side, you should only install Windows 11 Dev on a virtual machine.
