

# How to download and use Auto Click does not occupy the mouse on the computer

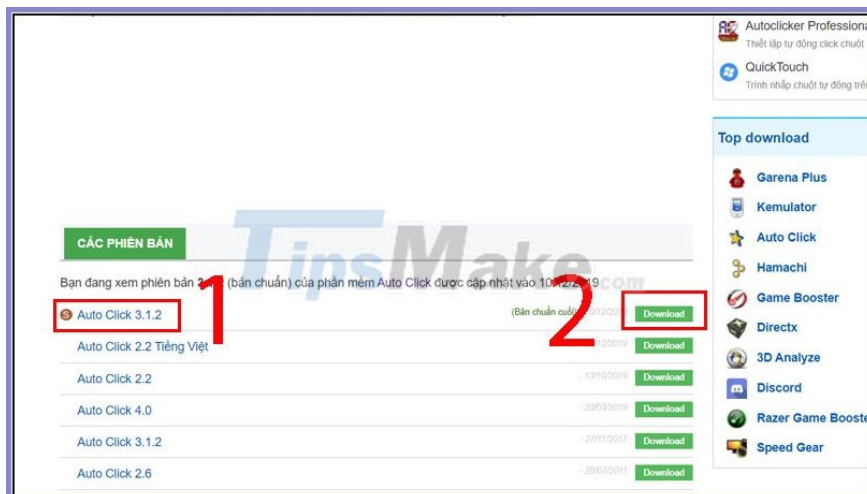

How to download and use Auto Click does not occupy the mouse on the computer, downloads and using Auto Click do not occupy Windows, MacOS

Auto Click is a software that helps you reduce mouse usage time with many automatic click modes, helping users improve efficiency when performing repetitive works of graphic design, photo editing, . This article will guide how to install and use the Auto Click software.

## 1. Instructions on how to download and use Auto Click on a Windows computer

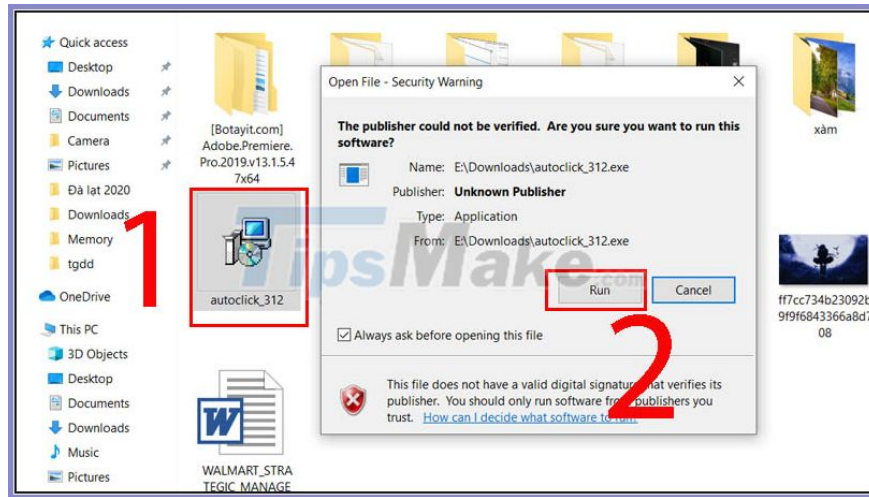

- Step 1: Download the software Auto Click

Select the version of Auto Click you want to download [HERE](#) > Select Download.

- Step 2: Install Auto Click

Go to the folder where you just downloaded Auto Click> Click on it> Select Run to proceed with the installation.

- Step 3: Install the operation

You can automatically click the mouse always with the F8 key to start / stop under the default setting of auto left click.

To change to right or middle click (scroll wheel) select Options> Select Clicking> Select Options.

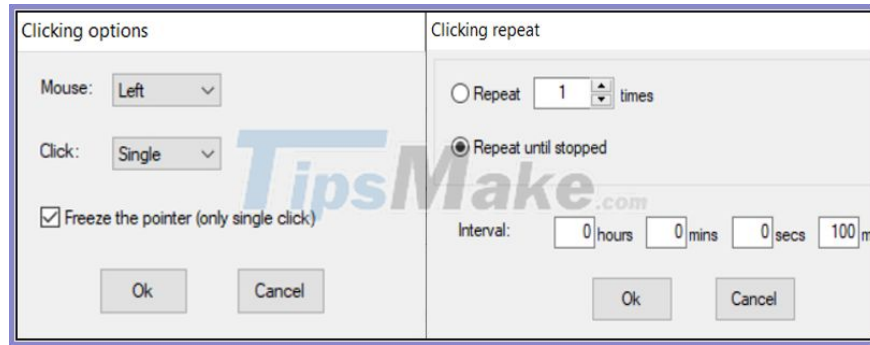

- Step 4: Select the operation you want to set

At Clicking options:

- + Here the Mouse section allows you to change the mouse click Left (left), Right (right) and Middle (middle).
- + Click item to choose Single (single click) or Double (double click).
- + The Freeze the pointer (only single click) option allows you to freeze the mouse when performing autostun (for single click only).

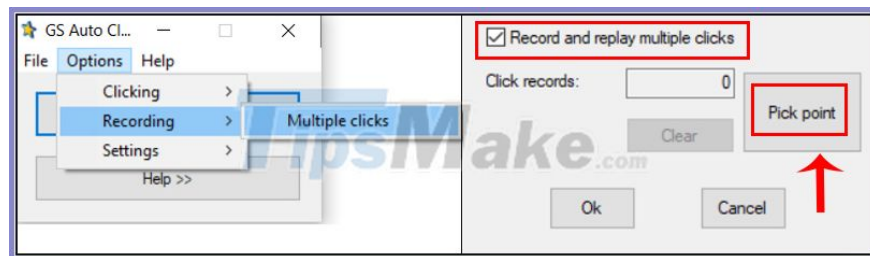

From the selection Options> Select Clicking> Select Repeat:

- + Here you check the Repeat option and enter the number of clicks or Repeat until stopped to set the click until you ask to stop.
- + Section Interval allows you to enter the space between each press.

- Step 5: Perform mouse click on multiple locations at the same time

From Options> Select Recording> Select Multiple clicks. Check the box Record and replay multiple clicks> Select Pick point and click any point on the screen so that the tool to record the position automatically click> Click records will display the number of positions you have set, multi click> Press Ok to save changes.

- Step 6: Set other settings.

+ Change Hotkey shortcut:

From Options> Select Settings> Select Hotkey. Click the box Click / Stop> Press the hotkey to set up> Click Ok to complete.

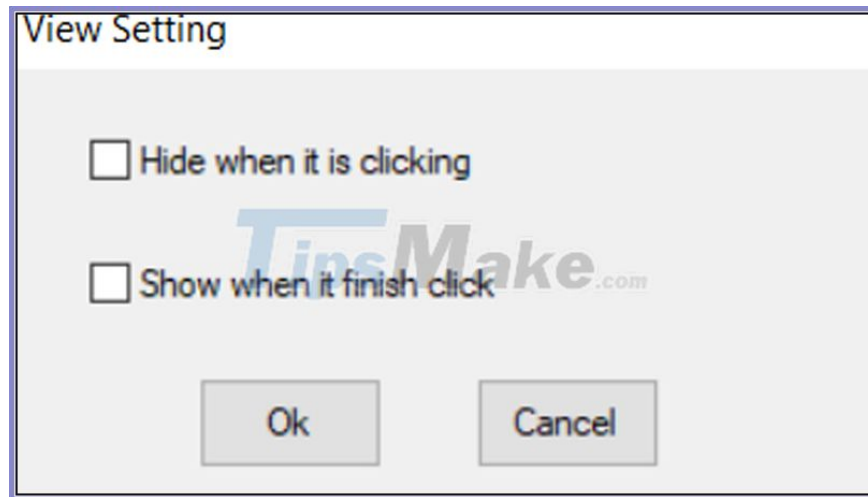

+ Select View Settings:

From Options> Select Settings> Select View allows you to set two options:

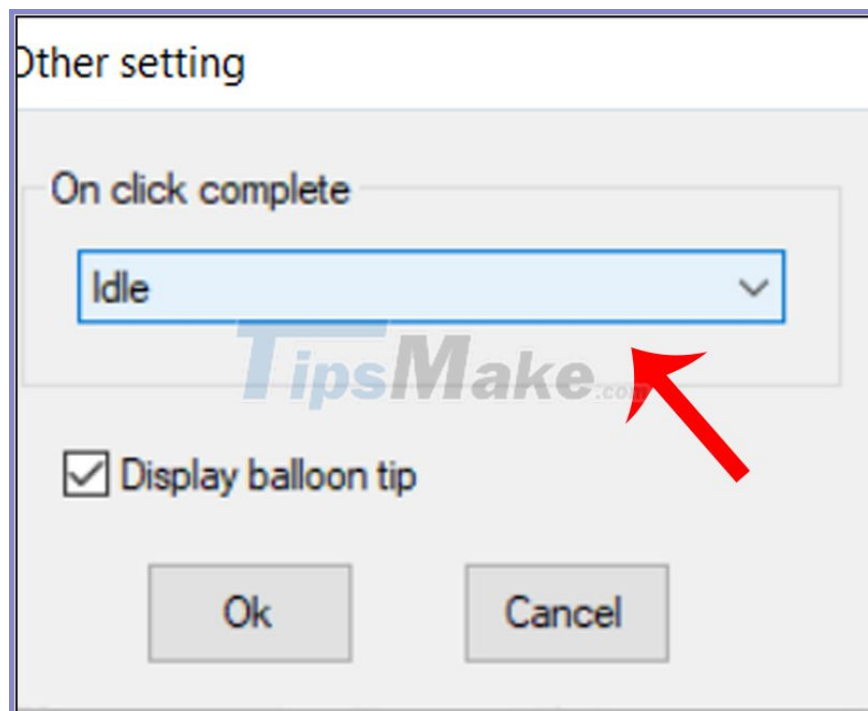

+ Hide when it is clicking: Hide the window when auto-clicking is done.

+ Show when it finish click: Display the window when finished click / click stop.

To set up shutdown or other actions after completion:

From Options select Settings> Select Other. At Other setting> Click the drop-down menu below and select settings such as Idle (standby), Quit (exit auto), Lock computer (lockout), Log off computer (log out), Turn off computer ( shutdown), Standby (backup) and Hibernate (hibernate) for the computer.
