

How to download applications on Google Play Store?

When downloading the app on Google Play Store, we often encounter some notices like Your device is not compatible with this version or This item is not available in your country. So how do you not download the application on Google Play Store?

One of the most frequently encountered problems when using Google Play Store is that you cannot download the application. When the screen appears, your device is not compatible with this version (Your device is not compatible with this version) or This item is not available in your country (This item isn't available in your country).

When receiving this notification, the application that the user wants to download is being applied in some regions, countries or for the test program. If you encounter this situation, you can consult some ways to download the application when you cannot download it on Google Play Store.

1. Websites download APK installation file:

APK files will help us to download and install applications in any browser on the phone or computer.

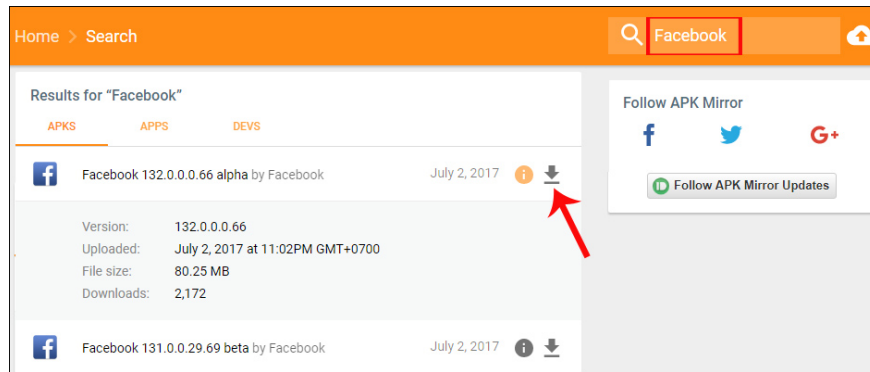

1. APKMirror:

This is a website that supports downloading safe APK files, without viruses, ads. The website provides users with the installed version of the application, so that you can choose to download the device.

1. <http://www.apkmirror.com/>

After accessing APKMirror under the link above, we **enter the application keyword to download** into Search bar. Soon, you will see a list of applications, along with different versions.

The i icon will let you know when the file is uploaded, the size, the version of the installation file. To download the file, click **the arrow icon** .

2. APK-DL:

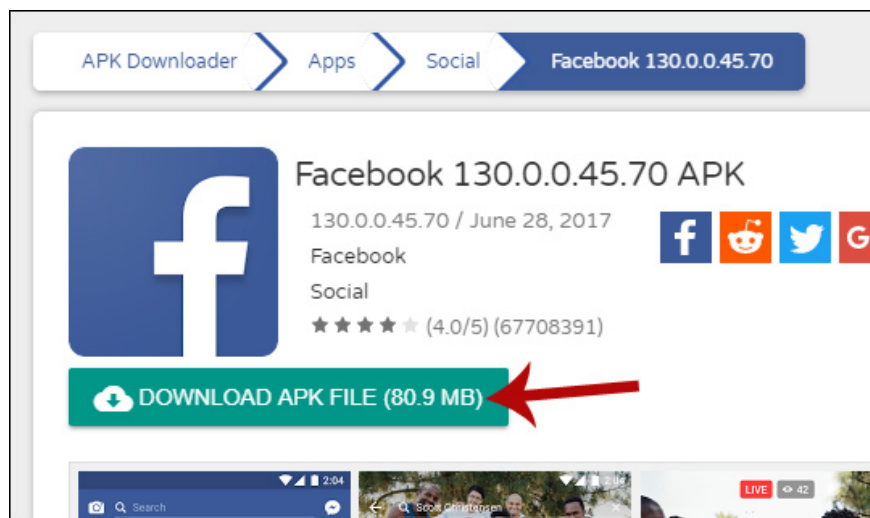

1. <http://apk-dl.com/>

Unlike the APKMirror site, it only supports downloading, APK-DL applications, allowing users to both find applications and games.

At the home page of APK-DL, enter the application name and the game you want to download or paste the application URL.

Then just click the **Download APK File** button to download the application installation file and you're done.

3. APK Downloader:

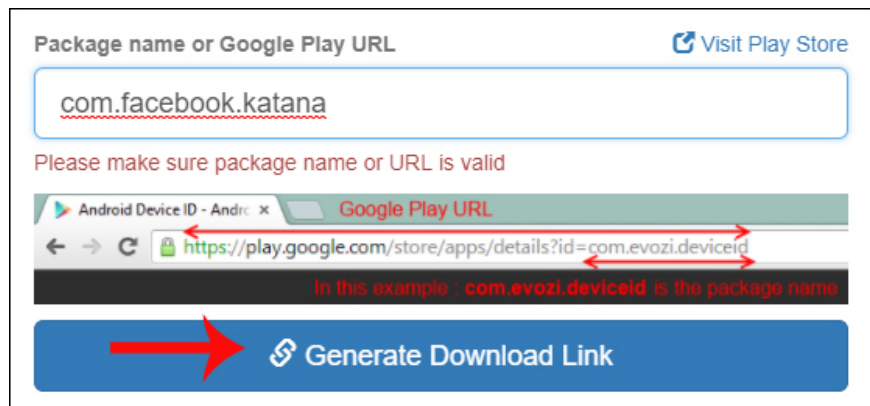

1. <https://apps.evozi.com/apk-downloader/>

At the main interface, **enter Package name or application URL, the game** into the white bar above, then click **Generate Download Link** to download.

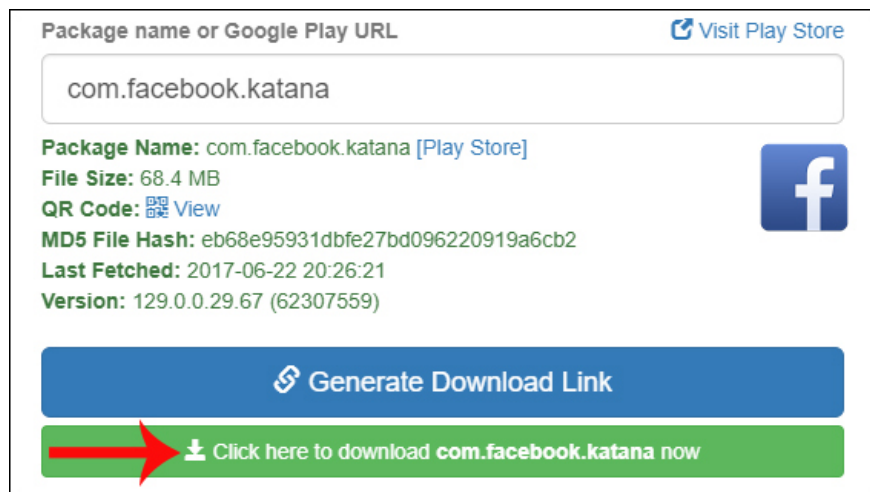

The Package name section of the application is **after the '=' sign on the URL of the application** . Such as Facebook URL as below.

<https://play.google.com/store/apps/details?id=com.facebook.katana>

Then the package name of the application is **com.facebook.katana**

Wait a few seconds and we just need to click the **Click here** button **to download** to download the APK file.

4. ApkLeecher.com:

1. <http://apkleecher.com/>

APK Downloader also **uses the app's Package name** or game in the URL to download the installed APK file.

After pasting the Package name section of the application into the search box on ApkLeecher, click the **Proceed** button to **download the page** to download the installed APK file.

5. How to install the APK file on Android:

After downloading the APK file or game to the device, we proceed to install. In case you receive an error message that you cannot install, you need to enable it to install an APK file from an external device on your Android device.

Users will proceed to activate the **Unknown source** mode to install the application from source outside Google Play Store.

How to download and install the APK file on the Android device you read in detail in the article [What is the APK file? How to download and install the APK file ?](#).

2. Install Anroid application with VPN application:

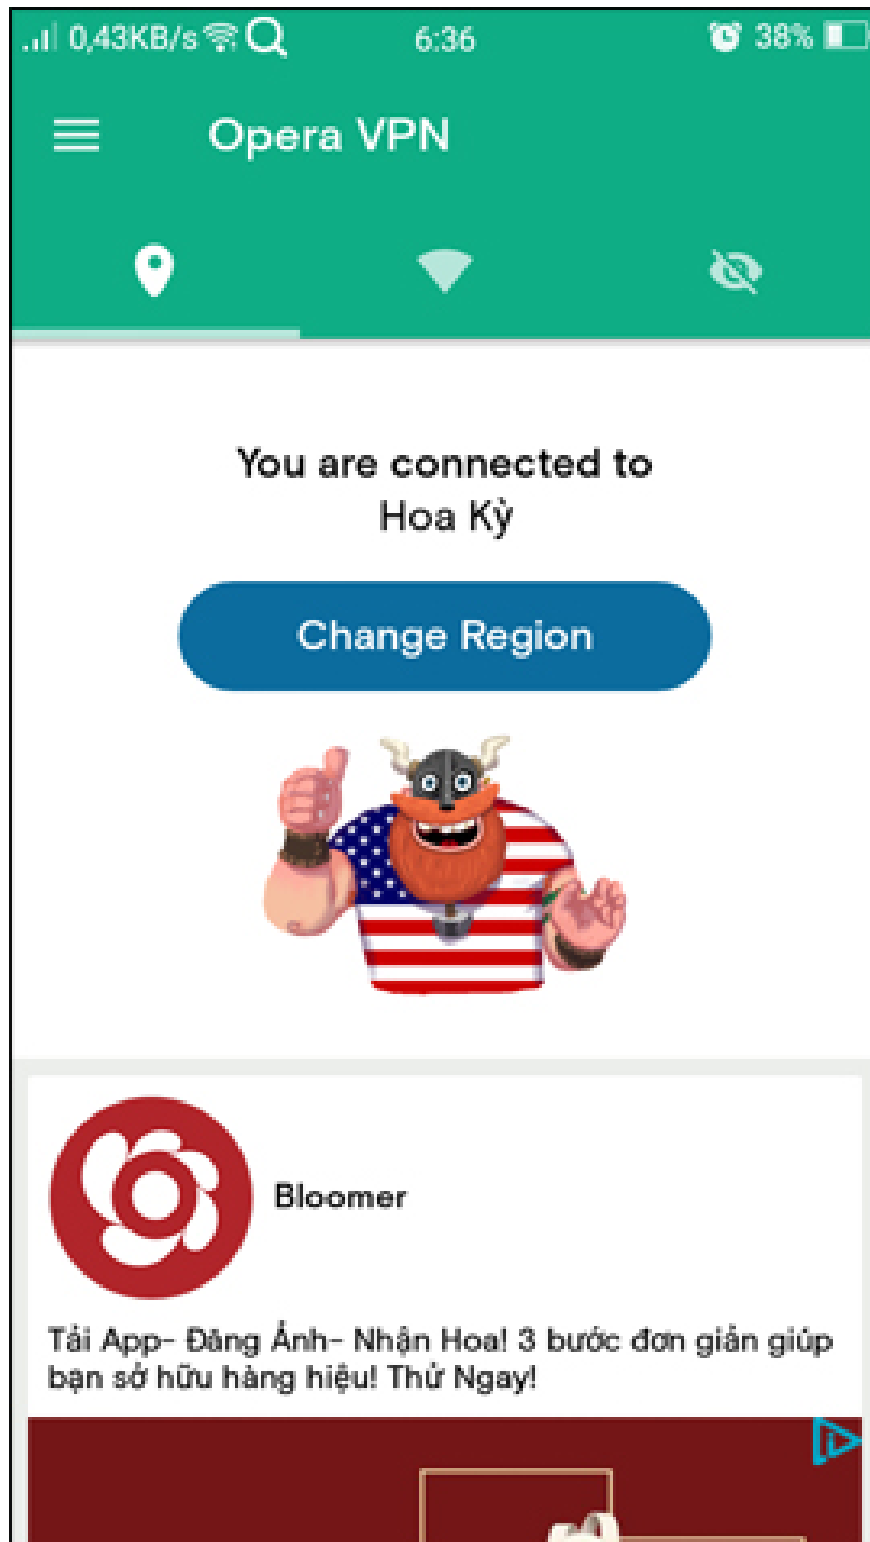

VPN applications can fake IP so that users exceed the national zone limit when they receive a notification. There are many VPN applications that users can download and use. Readers can refer to some applications below.
