

How to download Camera 360 to Android phones and iPhones to edit and take photos

The Camera 360 app on the phone is an app that supports photo editing and taking beautiful photos that is loved by many people. To use this application, download Camera 360 to your Android phone or iPhone. It will help you get the most beautiful and impressive photos.

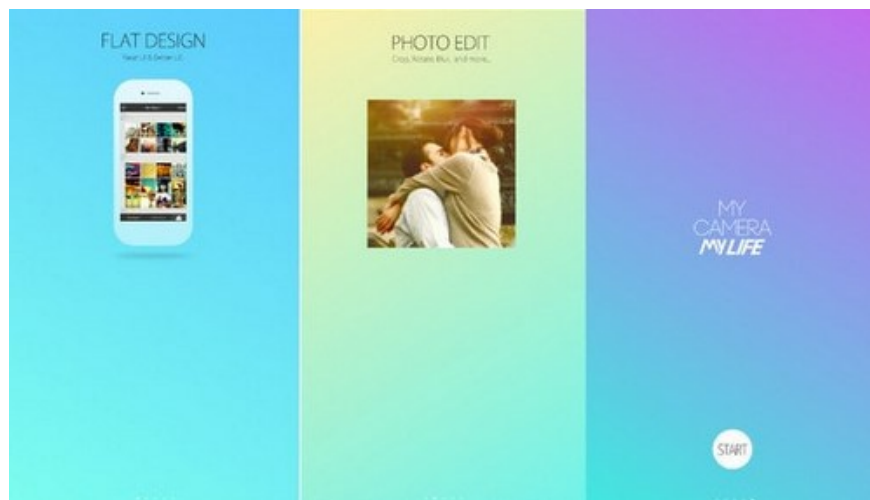

This method will help you:

- Get the 360 Camera download link
- How to use the 360-degree Camera effectively

Today I will guide you to take and create effects for your photos using **Camera360** software . The latest Camera360 Ultimate version with many beautiful and unique effects, readers can download the camera360 version for Android, iOS, and Winphone operating systems.

- * Download Camera 360 for Android phones: **Camera360 for Android**
- * Download Camera 360 for iPhone: **Camera360 for iPhone**
- * Download Camera 360 for WinPhone phones: **Camera360 for Winphone**

After installing Camera360 Ultimate, the interface will be as follows, To start the program, select **START**

This article TipsMake will guide you through two adjustment functions of the Camera 360 application, which are the photo taking feature and the photo editing feature, to help make photos taken on your phone more "sparkling" than ever. run out of.

I. Take photos with Camera 360

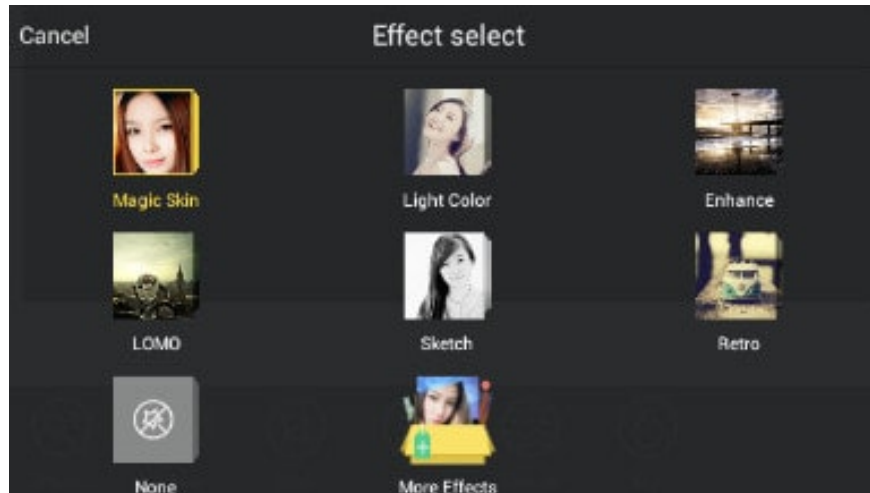

We will have the image preparation interface as follows:

Here you will have 5 optional tabs that I will number from 1 to 5.

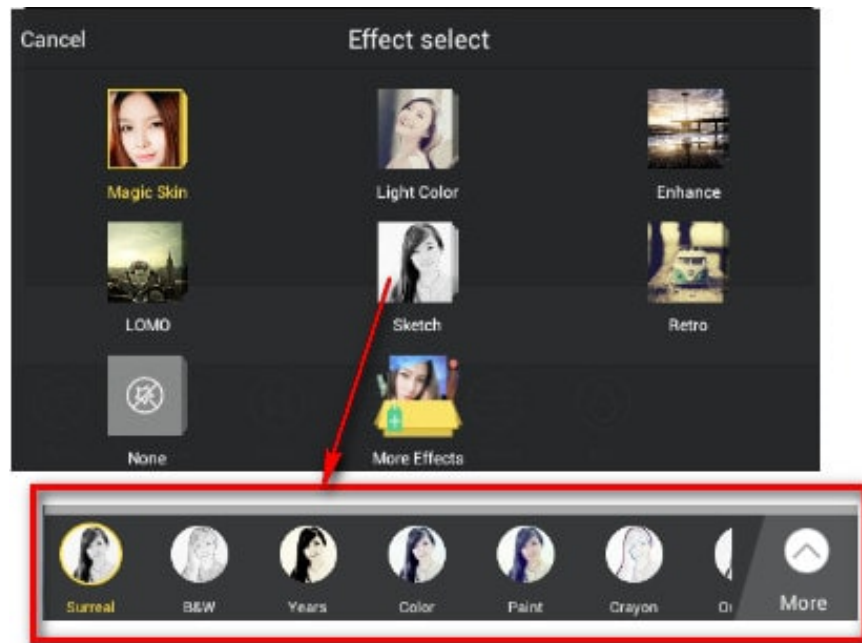

- Tab 1 will help you review photos and edit them (I will explain more in part 2 of the article).
- Tab 2 will help you adjust the frame for the photo according to the ratios: 16:9, 4:9, 1:1 depending on the frame you want to capture.

- Tab 3 is the photography key.
- Tab 4 is to adjust effects when taking photos. The default when initially entering will be **Effects**. **Effects** is this option that helps you add effects to make your photos more vivid.

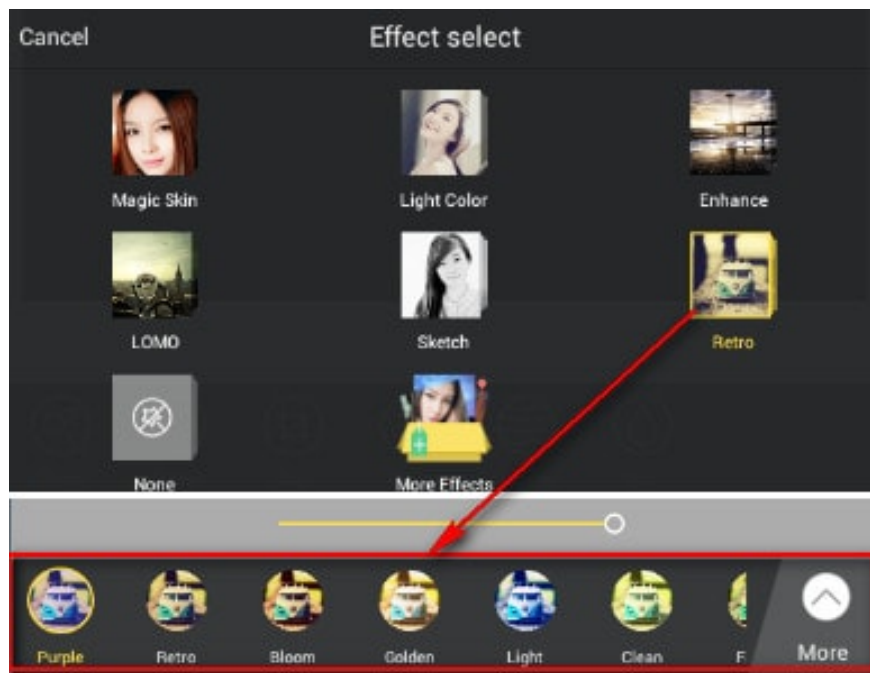

Tip One of the most appreciated and used effects is **Sketch** and **Retro**

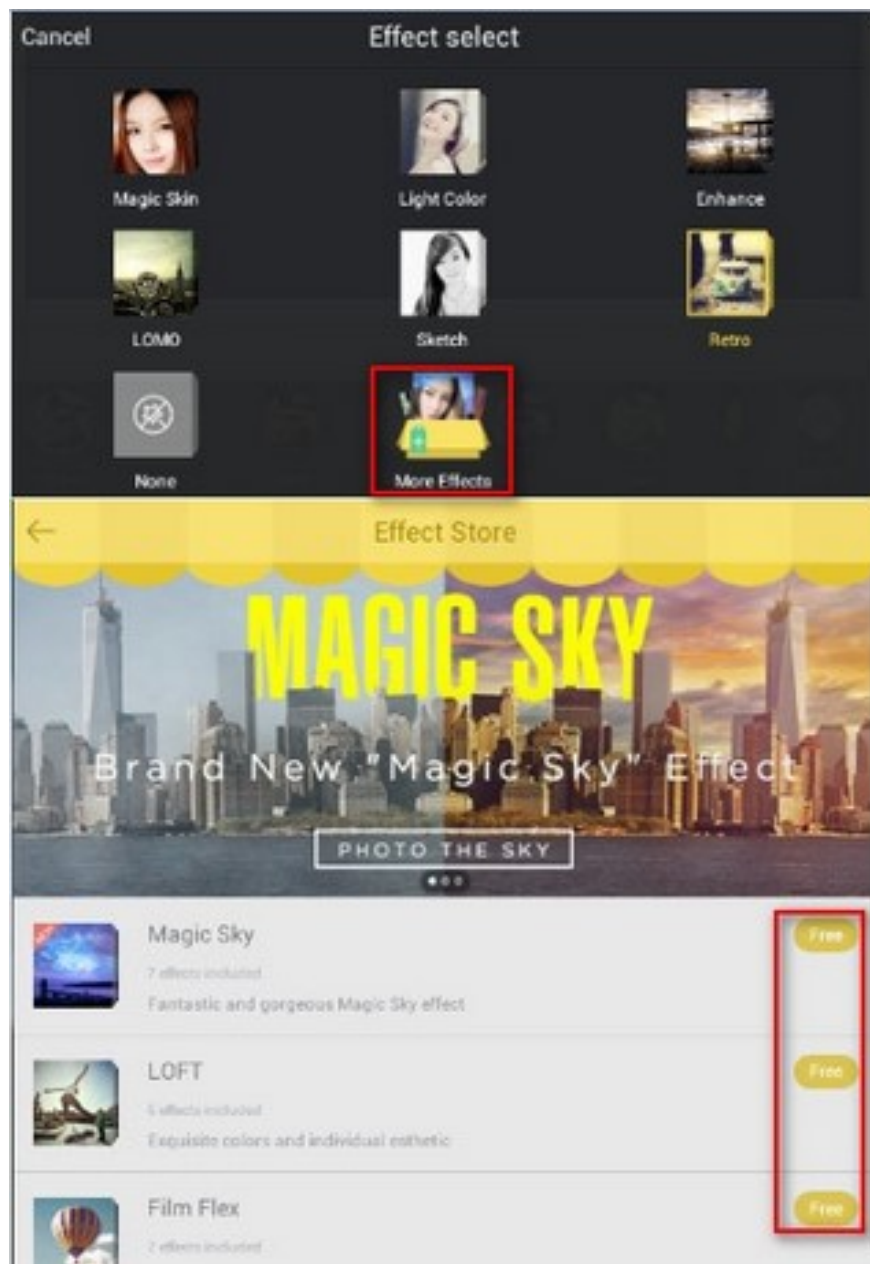

Sketch allows us to create an image effect that resembles a pencil drawing as if someone drew it for us. There will be many options depending on your preferences in this section such as Surreal, B&W, Year.

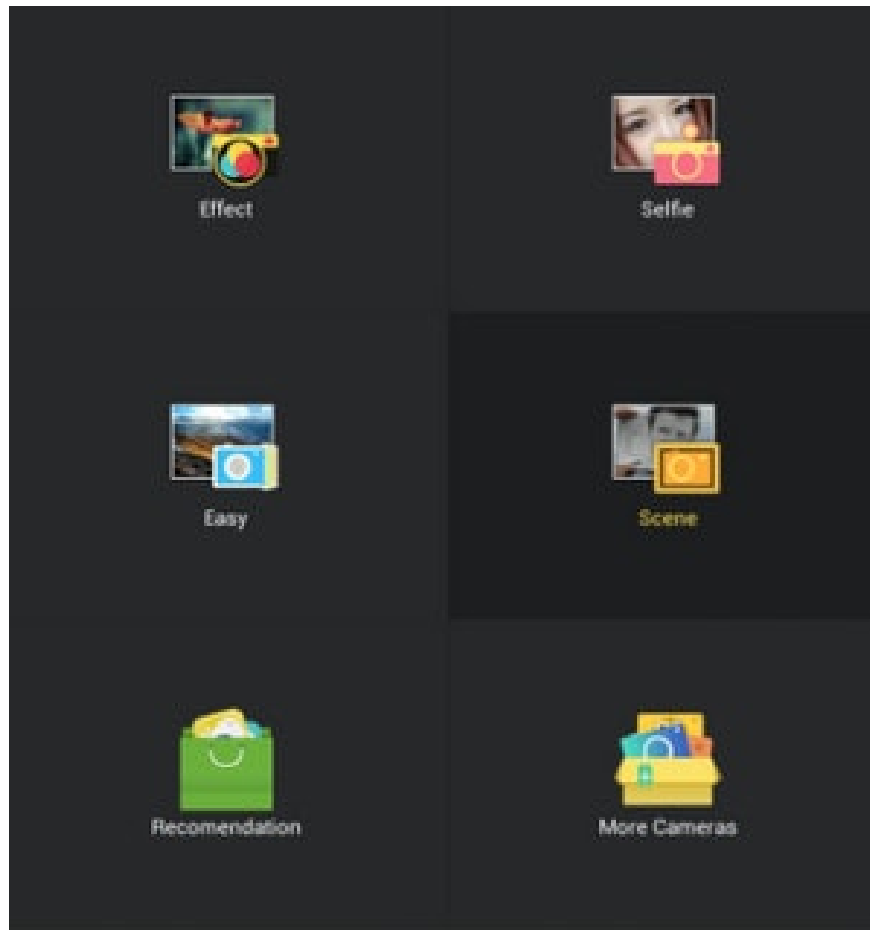

Retro is the part that I personally like. You can make your photos have an antique, rustic look.

Tip To add more effects, select **More Effects** , then the " effects store" interface will appear . Here you can add effects.

Tab 5 is where you can choose more shooting modes or get more effects.

In this section there will be options such as:

- **Effects** I introduced above.
- **Selfie** is taken with the front camera.
- **Easy** is to take a simple photo according to the default settings of Camera 360.
- **Scene** is to take a photo using a frame.

Tip In this section, by default there is only 1 frame for you. To make your collection richer, you can click on the icon as shown in the picture.

After selecting, there will be many beautiful and vivid frames appearing for you to choose from. To download and use, just select the icon you like and they will automatically download.

You don't need to pay attention to this Recommendation section, it's just an introduction to other software.

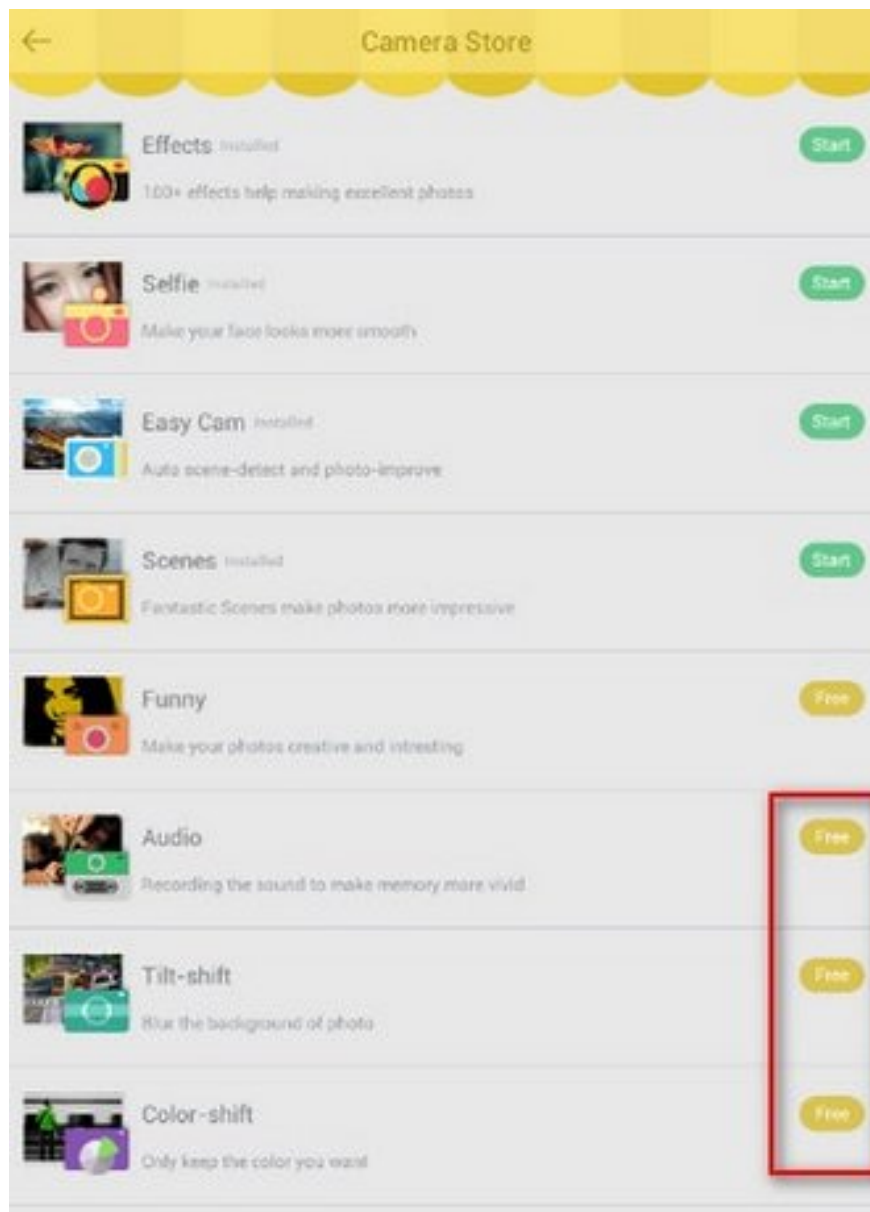

More camera is a section for you to get more shooting styles.

Tilt-shift: create a Tilt-shift effect for the photo.

Funny: create some fun effects such as Fish Eye, parallel mirror effect.

Color-shift: create a black and white photo effect with any color in the photo.

Audio: take pictures with sound.

II. Edit and add effects to photos with 360 camera

To review, edit or share your photos, select the icon in the bottom left corner as shown in the picture:

Inside, the following items will appear

My Album is the photos you took with *Camera 360 Ultimate*.
Other Album is where photos are stored on your device.

The last icon will help us retrieve photos you save on social networking sites or Camera360 Ultimate's cloud data itself. After selecting photos, new tabs will appear.

Share is the tab where you can share your photos on popular social networking sites like Facebook, Twitter. or you can also send SMS, Mail, Bluetooth. very conveniently and quickly.

Delete is to delete the photo.

Edit is a photo editing section in a variety of styles, making your photos richer.

After entering the **Edit** section , there will be 6 editing and effect tabs including: **Effects** , **Rotate** , **Crop** , **Adjust** , **Texture** , **Blur** . .

I will go deeper into each part as follows:

1. *Effects*: I have provided instructions on this option, you can refer to part I of the article.

2. *Rotate*: You want your photo to be vivid and seen from a different perspective. Options will help you do it easily. Rotate helps you rotate left, right, reverse left and right viewing angle (like looking into a mirror), reverse up and down (like looking at the water surface)

3. *Crop*: Of course, when taking photos, we cannot avoid having redundant scenes around us that we do not want. Camera360 Ultimate also helps us remove them easily

4. *Adjust*: This option is also quite important. You can adjust your photos to make them more harmonious with the sharpness, brightness, saturation adjustment tabs.

5. *Texture*: This item allows us to create surrounding effects to create emphasis for the main character of the photo. You can also choose this section according to your personal preferences

Picture 19 of How to download Camera 360 to Android phones and iPhones to edit and take photos

6. *Blur*: This option of Camera 360 allows you to blur your photo, like your photo was taken in foggy weather. There are 3 options in this section: circular blur, top and bottom blur, and left and right blur. Depending on each case, you can adjust accordingly.

Below are images before and after editing with Camera 360

So I have finished instructing you to take and edit effects for your photos using Camera 360 Ultimate software. However, for each image, you choose the most suitable effects and photo frames. Whether the photo is beautiful or not depends a lot on your options. Hope you get the best photos.

If you want to take photos with date and time so that you can preserve the moment and when you look back, you can know what day that photo was born, you can refer to the article on tips for **taking photos with date and time** , you will quickly Quickly get the photo you like.
