

# How to download CH Play and install Google Play on the phone

If you're having trouble and can't update Google Play Store to the latest version, you can manually install Google Play Store on your Android device.

CH Play or Google Play Store regularly updates to the latest versions to provide users with new features and experiences. However, if you are having any problems that cannot update the latest version of Google Play Store and you still have to use the old version of Google Play Store. You can then think of a solution to install Google Play Store yourself on your Android device.

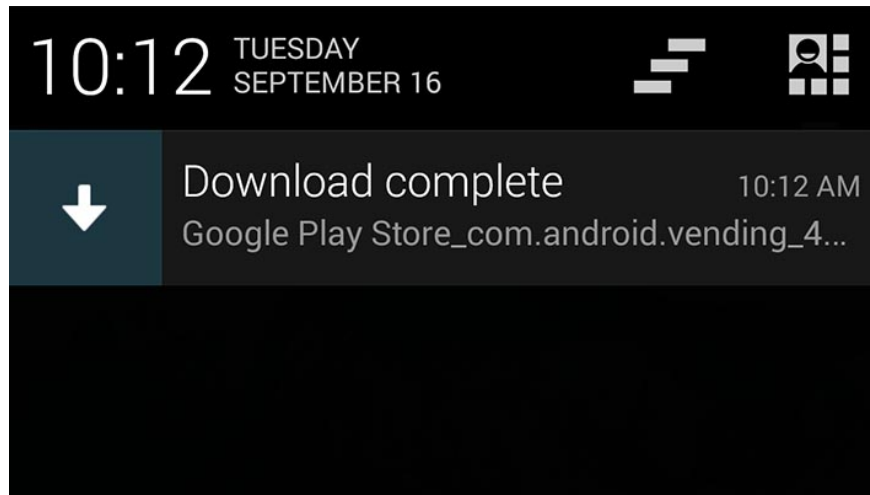

## HOW TO INSTALL PLAY BY FILE APK

### Step 1: Check the current version

The first step is to check the current version of Google Play Store on your Android device. To do this, follow the steps below:

1. Open the **Google Play Store application**.
2. Open the **settings**.
3. Scroll down and you will see the current version of Google Play Store on your Android device.

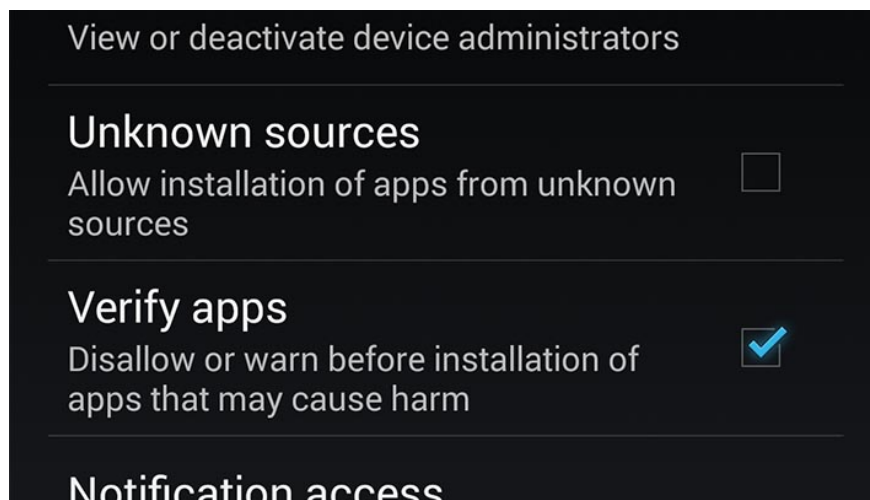

## Step 2: Download the CH Play APK

Some tips for downloading Google Play Store APK:

- Only download APK from reliable source. If you download an APK from unreliable sources, you may be mistakenly downloading the wrong files or unwanted programs, the virus is included in the downloaded file.
- In addition, you can download the APK directly on your Android device or download it to your computer, then copy the APK file on your computer to your Android device.

Refer to the steps to download and install the Google Play Store APK here.

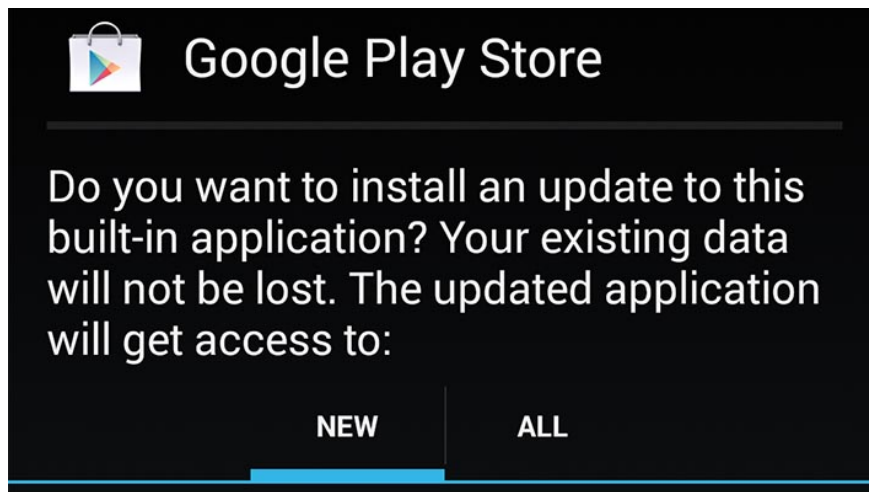

## Step 3: Activate Unknown Sources on Settings application

Unknown Sources is part of Android device. If Unknown Sources is disabled, users cannot install applications outside of Google Play Store. Therefore you must activate Unknown Sources to install the APK.

1. Access the Settings app (settings) on your Android device.
2. Next click on **Security** .
3. Find and check the **Unknown Sources** option. At this time, a warning window will appear. Click **OK** to activate Unknown Sources and install APK.

**Note:**

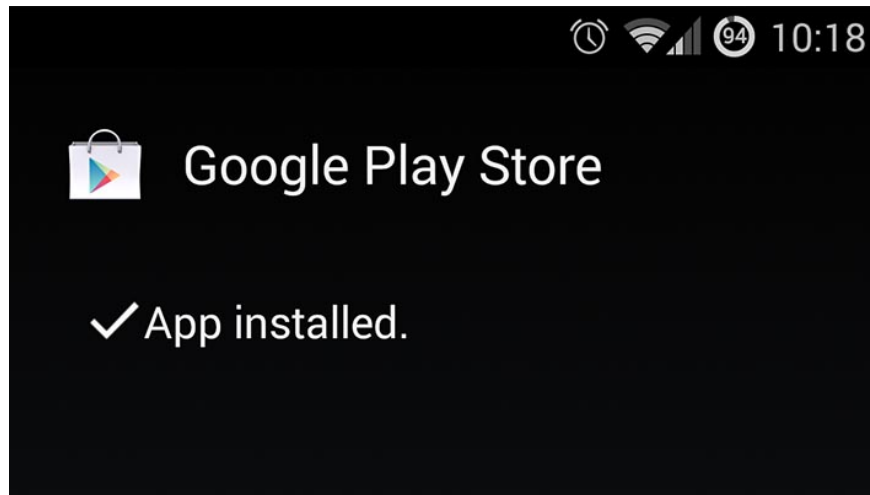

If Unknown Sources does not appear at Security, you can find options in the Privacy settings or Application (Apps) settings section.

#### **Step 4: Use the file manager and install Google Play Store**

You can use some file managers on Android, such as ES File Explorer.

- Open the file manager and find the location where you copied the Google Play Store APK file from your computer to your Android device. If you download the APK file directly on your Android device, you will find the file in the Downloads folder on the SD card.
- After you have found the APK file, click on the file. At this time on the device screen, a popup window will appear asking the application you want to use. In this case, click on **Packgae Installer**.
- On the next window, carefully read the terms then click Install to install Google Play Store. After the installation process has finished, the latest version of Google Play Store will be installed on your device.

## Step 5: Disable Unknown Sources

After Google Play Store has been installed, your next task is to disable Unknown Sources to protect your device safely during the installation of applications.

1. Access the **Settings** app (settings) on your Android device.
2. Click on **Security** or **Privacy**, or **Application** to find the **Unknown Sources** option .
3. Find and uncheck the **Unknown Sources** option.
